Lookie!

  Star Raiders blasts off in early 2011
  By Tor Thorsen, GameSpotPosted Oct 13, 2010 9:05 am PT

  Episodic remake of Atari 2600 space combat sim arriving on Xbox 360,
  PS3, and PC early next year; first trailer inside.

  http://www.gamespot.com/news/6281815.html

Also, the press release:

  Atari's Legendary Star Raiders to be Re-Imagined for a New Generation

  Offering Team-Based Multiplayer for the First Time; Star Raiders to
  Soar Onto Xbox 360, PS3 and Windows PC Download in Early 2011

  http://www.atari.com/node/3660

And here's a Q&A with senior producer (from Atari) and the president
of Incinerator Studios (the company developing it):

  Star Raiders Q&A - First Details
  By Staff, GameSpotPosted Oct 13, 2010 9:03 am PT

  Senior producer Jonathan Moses and Incinerator Studios president
  Joel Goodman discuss this upcoming remake of the classic Atari 2600
  game.

  http://www.gamespot.com/xbox360/action/starraiders/news.html?
sid=6281808&mode=previews

cough They keep calling it a "classic Atari 2600 games", which isn't
exactly accurate. The original Star Raiders was from 1979 for the
Atari 400 & 800 computers. (There WAS a 2600 port a few years later.)

I also emailed Doug Neubauer, who created the original Star Raiders
(and developed the POKEY chip in the Atari 8-bit series),
and he hadn't heard about the remake yet (!)

It sounds like it WILL have:

  * Galactic map
  * Energy management

I HOPE that it'll also have:

  * "WHAT'S WRONG?" ;)

And apparently the ship will 'transform' depending on the situation.

Anyway... now I need a PS3.

Oh, and I also hope it has a weapon that sounds
like the original Star Raiders photons (like BattleSphere does),
and it sounds like (from the Q&A/interview) that it might have
the original game as a built-in. (And I hope they mean the
real original from the 400/800, and not the 2600 version! :))

99% of ATARI 800 XL/XE hardware and software was designed by men.That
proves that women are too stupid to design anything for the 800 XL/XE.
Women should not work with computers!

Women should stay at home and they should care for the kids and wash,
clean and cook for their husbands. Men were made for designing
hardware, for programming, for working and for earning money.

Feminism is evil, we HAVE TO turn back time and we have to take it
back. Women MUST NOT make careers, they have to be mothers and
homemakers.

Come to alt.misogyny to talk about how evil feminism has made women
and what we men can do to destroy that evil and to bring back the
lovely housewives of the past.

Just out of curiousity, has anyone else made it as the 1st Colonist on
the Tournament level of MULE? If so, what was your strategy?

Personally, what I had to do was provide food and energy to all the
colonists on a continuous basis. Before round 10 or so, they trusted
me enough to depend on me 100% for all their food and energy needs.
Then on round 11, I cut them off and refused to sell.

This allowed me to be the top colonists in the end, but it never gave
the colony as a whole a good final ranking. If I did not withhold
food and energy on the last round, the colony always had an excellent

ranking, but I would not be the 1st colonist.

Does anyone believe the game cheats on the last round to make the
computer players higher?

And Anne Westfall of Archon fame! Oh, the hours I've spent on that lovely
game. Roberta Williams of the Kings Quest series! Dona Bailey and
Centipede!

and I'm sure, many, many, more... :)

Oo-oo I know this one, M.U.L.E. by Dan (Danielle) Bunten. Check her
out on Wikipedia.

BTW if you were a true misogynist you wouldn't even put up with a woman
in the house, let alone the kitchen.

I think misogyny is natures was of removing a section of idiots from
the work, unless of course they figure out a way to self replicate :)

What I'm looking for the floppies already made up. I've seen people in
other places who have tried making the discs from images but couldn't
because the boot track is special and the discs aren't bootable unless
you know how to format the disc properly. I don't have any of the
discs that came with the ATR so I need all of them.

I have a couple of disks from a collection I acquired that claim to be CP/M 2.2 masters for the ATR8000. If anyone can elaborate on the formatting, I'd be glad to try for a copy. I have a lot of ways to go at this, including a Catweasel (which can read anything - with enough coding work).

I'm guessing they use Atari standard density (like a 90k diskette) on the boot track (or tracks?), then DD (or ED) for the data. Anyone know for sure?

Against the computer? I usually focus on food and energy first. The
computer players are usually too greedy for smithore and crystite to
bother about these essentials and have to buy from me. Instead of
collecting soil samples, I watch their assays and memorize the plots
they tested, then try to build a large area of adjacent plots in that area.

For high crystite production it is much more important to own several
adjacent plots (even buy buying them) than having "high" or "medium"
plots. One also must never be low on energy. Food is only important as
long as one has to equip his plots with mules.

In the final phase of the game, I reduce my food plots in favour of
energy and crystite (by equipping mules for crystite, leading them onto
energy plots and exchanging them with the energy mule, then placing this
one onto a food plot and finally leading that mule back to the store).

I win the vast majortiy of games this way.

Putting an embargo on the computer players gives bad end results, while
my method may result in totals of more 80,000, on several occasions more
than 100,000 credits and thus allows the players to "live comfortably"
or even "retire in elegant estates".

Photo of the switch on the board. No wires. Soldered to the board.
Seems a shame to mangle it. Maybe I can add some solder on the bottom to
bypass the switch??? I am not a HW guy, have never put a drop of solder on
a computer, and this is the first time I've ever opened an 800... :) Thx!

               Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, and 800XE personal/home computers, and the Atari XE video game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from 1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

Today, the Atari computer intellectual property rights, along with the home market rights to the Atari trademark itself, are owned by Atari Interactive, Inc., a subsidiary of Atari, SA of Lyon, France.

Trannys don't count and Dan Bunten always regretted having the
operation and wished it could be undone.

I'm scared! :) I see three points on the bottom of the board
under where the cartridge door switch (shown in photo at URL below)
attaches.

Should I just solder them together? Would it be safer if I just
used tape to force the spring-loaded button down? What? :)

Bill, the switch is soldered to the board by three pins. There are
just two pins for the the switch to close.
Look at the bottom of the board under the switch and unsolder the
three solder points and pull the switch out.
Then just tie the two points together with a wire, on the top of the
board. You can see from the traces on
the bottom of the board which two points need be tied together.
I'm gonna post a picture on AtariAge.

I finally got my domain back:
http://www.atariplanet.info/ATARIBBS.TXT

And if anyone is aware of any updates to the list, they would be
appreciated.

Thanks,
Trevor

Super, thanks! I've got a friend with a multimeter and with some soldering
knowledge
who offered to help, so we'll be using this photo as a reference. :)

Thanks, Bill, those 41464-10, I ordered two from Jameco, I just got
them yesterday (10/20/10) and installed the upgrade, now I have a 64K
600XL, works great.

Nice. Glad I could be of help. They usually have refurbs of odd
DRAMs that are still commonly used. I have never had a problem
with anything that I have bought from Jameco.

Bill

Hi, I'm Ben Smith here in Portland, Oregon USA! Proprietor of Bravo Sierra Computers! Occupying a unique niche in the Atari World! Most Atari Dealers sell NEW, I also sell Used Atari Goods! Not only do I sell NEW Atari Goods at a competitive price, I also sell used Atari Goods you wont find at Swap Meets, Thrift Stores or Auction Sites! And I sell for less! Unlike those remaining anonymous! I test Goods before I sell them. Not only can I sell you some Great New stuff! I can also sell you hard to find 2nd Hand Goods, because I'm the guy people goto to give Ataris a New Home! Saving Orphaned Atari's from Oblivion!Goto http://BensCatalogs.Atari.org or (503)256-9974!

According to the UPS tracking system (I used them instead of USPS this
time) it was delivered successfully.

I think all of us are. :)

Offtopic, but how is the ST video adapter coming?
Really looking forward to that. Thanks!

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, and 800XE personal/home computers, and the Atari XE video game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from 1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

Today, the Atari computer intellectual property rights, along with the home market rights to the Atari trademark itself, are owned by Atari Interactive, Inc., a subsidiary of Atari, SA of Lyon, France.

Kind of funny. I've been working on some old laptops and decided to
use one as a sio2pc server. I got kind of picky trying to get W95
working with all the right drivers. Teats on a bull because MSDOS or
DRDOS handle 520 meg partitions & most of the hard drives I have
available are less then 2 gigs. So with keen interest I start reading
a post about one of the candidate laptops, a Toshiba 445, and it gets
a bit savaged for having a slow(133 mHz) processor, limited memory, no
longer supported, .. then I finally look at the post date 2004!

I have to admit W95 was pretty weak. I just use a flash drive to
transfer files on later computers but W95 doesn't even have good USB
support.

Then I start looking at my Red Hat Linux 6.2 CDROMs & I find Red Hat
tanked! I really nedd to get out more!

Rick

The Original SIO2PC Software is DOS Based. Also There is Still a DOS
version of APE Available.

there is a DOS driver for flash drive that I have. it's pretty handy
but, you do have to have the flash drive plugged into the USB port
before you boot the PC up.
I also have a win98 Generic USB Flash unit driver. it works like XP
and etc. you can plug in any USB flash drive and it will automatically
use it.

I'll dig them up for you if you like.

Thanks for the offer but I'd hate to make work for someone when I'm
still confused about what I'll end up doing. Story is: A friend bought
a pallet of busted up and obsolete laptops with a bunch of hard
drives. I've found a couple with later OS then W95 but I don't know if
the laptops have the guts to run anything later i.e. only 8 megs of
ram.

What I had'a ought'a do is pick up a netbook. I've seen them for ~$300
and a cheap USB programmer off eBay. I just get to fixing stuff and
end up with "deer in headlights" syndrome from too many choices. A 40
meg hd with DRDOS & maybe a 3.5" floppy would be plenty but I'm being
self indulgent. The high end end will eventually make sense to me,
just takes time for me to come to my senses. SHEESH! I'm even thinking
I need to get one of these tired laptops running Red Hat Linux!

Rick

If you really need DOS compatibility, check out DOSBox
(http://www.dosbox.com/). The big advantage to it (other than being
multiplatform) is that it gives you backwards-compatibility on modern OSes.

There was an all atari store in eugene oregon that closed, sold it's
complete inventory to someone that mailed a catalog out. but they
never opened. I think they were in lincon city oregon. I wonder what
happened to all that Atari stuff. been watching Ebay for years and
never seen anyone in that area selling.

Ubuntu is the popular one these days. Or just go straight for
Debian. There are also distros made specifically for smaller/slower
systems (PuppyLinux, Damn Small Linux, etc.)

Enjoy!

XF551 can detect the density in first sector of 5 inch disk normally
but XF35 rom by Bob Woolley upgraded, the drive can not detect the
density!?!?? how come? double density disk can not be read after
turning on the drive! I hate that when the single density DOS disk
boot, change the density, and the drive can read the double density
disk. I want a permanent double density after turning on the drive. Do
anyone know how to solve the problem?

I'm still a bit perplexed but I think it is getting a bit narrower. I
well select one with floppy & CDROM with at least w95 capability but
would prefer something later but not too new. Will all those versions
of linux run on a Pentium I with 8-24 megs of mem on a 1 gig drive?

BTW: One of the old systems was from Cisco. hard drive had a gig of

old internal memos and emails. God awful boring to look at. Hard to
believe I used to generate that kind of crap for a living. :)

Rick

Yes I remember them. I ordered tons of Atari stuff from
this place. Brings back lots of memories just thing about
it. Computer Palace and Toad were the two places I ordered
from. I really miss them.

I did exactly that, wired the door switch closed inside the computer,
so the cart door switch didn't work.
It is pretty easy, with a little solder. Just open the computer up, I
guess there are two wires going
to the switch, disconnect the wires and tie them together. There is
no reason why the door should
turn the computer off.

Afraid I don't get what you're getting at. You don't like google
groups? I've heard of people killfiling any
post from Google Groups, maybe you should do that. I come to csa8
today and there are three
BS spam posts as usual. I've seen a number of comments about csa8 in
here and in other places
that people no longer read csa8 because of Ben Smith's constant,
frequent, multiple advertizements.
I don't killfile them, I want to know what is going on in the group.
You're not the first person I've seen who has a dislike, disdain for
Google groups. I suppose you pay
a subscription to your news source, or maybe you have a feed of your
own.
I mostly like other forums. Kjmann didn't like a forum, I won't
mention it, I presume because he
couldn't advertize there, so he started his own forum at his

commercial website. Oh, well I'll
mention the forum place, atariage.com.
Regards to you.

A nice free alternative to Google Groups is www.eternal-september.org .

It doesn't carry any binaries, but they do have a real news server.

I don't understand what is wrong with google groups. I guess I do.
It's like what used to be disdain
for AOL addresses, used by the masses and not the elite.

To be fair, the problem wasn't so much with someone having an account on
AOL - it was the general disregard for traditional online etiquette that
a good chunk of AOL users exhibited once they were turned loose on the
Internet. The AOL email address just served to act as a potential
warning sign of idiocy ahead, though not all of their users were idiots.

Anyway, I'll toss my hat into the ring for news.aioe.org as a free
Usenet server with posting rights. No account signup required, and they
do carry a pretty good span of newsgroups. No idea if they support
.binaries or not, but then I don't use NNTP for that.

>Video Game console systems.

Mega-crazy and I hope you get a successful result. But I will
respectfully lightly rain on your parade for a moment.

The high score part is cool for those who really enjoy those games,
but who really enjoys 7800 games? Among the classic systems I've owned

are the 2600, a ColecoVision, a 7800, several Atari 8bits incl. an XEGS, and a Nintendo Gameboy. I think the 7800 was the least enjoyable of them. Dark Caverns was tedious and Galaga felt incomplete, for example, and Asteroids *looked* good but the play value and faithfulness to the arcade were very poor (it was like a 2600 Asteroids enhancement, not an arcade Asteroids port).

The productivity part sounds interesting, esp. the SIO and KB ports, But there would need to be a scary amount of development done to actually use 8bit peripherals, and once one could, what then? The 7800 is not compatible with anything. The retro community is not tiny, but you're planning to make a niche of niches. To get the activity going to realize the use of these functionalities would be really challenging and take a long time. Compounding this is that the 7800 is reportedly difficult to program for.

Okay, I said my criticism and I hope I wasn't negative about it.

Competition for coin has never been stiffer. I've spent mine on
several Sunplus ARM based handheld systems and a Windows Mobile phone.
I've just become aware of the Dingoo system which pretty much puts
anything from ~2 years ago to shame. You can buy it for $80 and with a
$30 optional SD card it turns into a dual boot system with Linux that
seems like it runs every emulator known to man.

I've seen the Android and IMHO it seems superior to my Windows based
cell. They tie for basic functions like phone and GPS but the Android
leaves Windows behind when it comes to apps. I still haven't installed
an 8bit emulator on my cell but it is on my to do list.

I'm not sure which WM-based phone you have right now, but there are a number of projects to get Android working on WM-based hardware. They're in varying states of completeness, but generally look promising.

For an example, take a look at http://7x7.us/Uu0 - I've been running this on my HTC Rhodium/T-Mobile Touch Pro 2 for a couple of months now, and while it's not quite ready for prime-time (no Bluetooth is a killer for me), it certainly blows WM6.5 out of the water on the interface alone.

FWIW, WM7 is supposed to be pretty slick. However, in Microsoft's infinite wisdom, they'va announced that it will only support phones with three face buttons. Mine has four, so no upgrade for me.

> They tie for basic functions like phone and GPS but the Android
> leaves Windows behind when it comes to apps.

Ehh - that depends on what you want to do. All I really need from my phone apart from the ability to make calls, sync my calendar and email, and do some light web browsing is an SSH client. For everything else (and this even includes SSH), there's a laptop.

> I still haven't installed
> an 8bit emulator on my cell but it is on my to do list.

They're out there, but I'm not overly-impressed with them. To be fair, phones just aren't a great hardware platform for this kind of thing (IMHO) other than for the neat factor.

- X.

The phone hardware is probably closer to the heart of the matter.
MetroPCS Samsung Code i220 so it is only ~WM6.1 and I have heard
somehow Samsung was loving the pooch on even getting it to WM6.5.

That's part of my dilemma. For instance, took my boat up the delta to
Stockton. Two of the planned stops for gas were under repair so GPS
functions got me an open fuel dock while I was on the water. I use the
camera and MP3 player a lot too. Other thing is I was paying ~$170 for
two land line phones, dialup ISPs, and two cells. I already canceled
one phone line and as soon as I get the Code tethered via Bluetooth I
will cancel the ISPs. From what I've seen the through put on the cell
is close to double that of dialup. Yeah, I know, but I live in the
country and we don't have DSL or cable.

BUT geesus! My S.O. said something like "Look how bright that star
is!" and I replied "I don't think it is a star, I think that is
Venus." My Son loaded an app on his Android that works with the built
in GPS and sensors to identify stars and constellations! My son points
his Android on the section of sky where we were looking and a star map
comes up with Venus and the other stars in that slice of sky
identified.

I have Atari800 up and running now. Aside from things like small
screen it seems to be a worth the effort. The Android and Dingoo for
both beat my cell for number of emulators but as long as mine has the
one I want, I can't complain.

This is a good point. My Rhodium's running WM6.5 just fine in
comparison to WM6.1, but Android's slooooooow on it. Granted, I'm
running Froyo (Android 2.2) off of the SD card as there's currently no
way to install it to ROM on that phone; my guess is that a 'real'
install would improve things quite a bit in that regard. At least, I
certainly hope this is the case, since I like the phone from a physical
interactivity standpoint; I just can't stand the OS and really want
something better.

FWIW, WM6.5 isn't a huge leap over WM6.1. It's definitely better in
several ways, but don't expect a quantum leap if/when MetroPCS makes it
available for your phone.

> Thanks for the link.

No worries; glad it was useful.

Understood on the above, and no arguments there. I long for the day
when we have one device to lug around that not just does it all, but
does it all *well*. Frankly, I don't see any of the smartphones (no
matter how good the hardware or OS may be) falling into that category
yet. It's coming, but it's going to be at least another 3-5 years
before we really see it come together IMHO.

Allow me to make a suggestion re: GPS: Garmin GPSMap 60CSx and the
Marine mapset. Sensitivity and selectivity on that unit typically
outdoes every GPS-capable phone on the market, and the ability to stick
in a 4GB (or larger) micro SD card and load all of your maps onto it is
killer. I've had mine for about 4 years now and love it.

> My son points

Now *that* is cool. What's that app called? I'd like to do some
reading up on it.

> I have Atari800 up and running now. Aside from things like small
> screen it seems to be a worth the effort.

This was my main gripe with it, and I don't fault the emulator for the
phone's screen being small. It just limits the amount of interaction I
want to actually have with it, though, so while it's cool to have it's
kind of limited as to how much use I could get out of it.

There were three or four responses to this post, I don't see them
now. A couple suggested some
free usenet servers.
Where did the posts go?

OK, I found them by clicking 'newer'. It was/is a problem with my
ability to read Google groups.

I am looking for the program in MSDOS that imports and exports the
files from / to the MYDOS or SpartaDOS formatted disk. Anyone know
and find?

Thanks!
JT

Hi, Jack.

There are a few utilities floating around for this. My favorite is atrwcx,
which is a plug-in for Windows "Total Commander" (A Norton Commander clone).

Seems to be MIA on the net, but drop me a private e-mail and I'll send you the
copy I have. Instructions are in Polish, but it's installation and use is
easy to figure out.

Steve

I was never able to get that to work. I finally ended up using SIO2PC
instead (and have since graduated to SIO2SD).

Thank you for this tip! I had been using google groups but I didn't like
its subscription option (only a digest of messages, not individual email
messages). Using aioe has enabled me to use Thunderbird to receive each
message individually again. Thank you!

-Eric

Glad it helped - I'm not a fan of Google Groups either, but there are so
few free Usenet servers out there anymore that they've become the de
facto default option for most people.

FWIW, I see from your headers that you're still using Thunderbird 2.
You may want to stick with it for NNTP - TB3 is an improvement as a mail
client over TB2 IMHO, but for Usenet it's a little weaker. And it
really sucks as an RSS reader.

- X.

Certainly that's a better solution for reading and writing full-disk images,
but I'm not aware it has the ability for file-level access. Am I overlooking
this feature?

Google Sky. Any description probably won't do it justice. I grew up
with Gilbert telescopes and still own a small tripod mounted
refractor. This was the neatest thing I've seen in years.

Two old one's that I remember are ~UTIL by Charles Marslet(sp?) & ~SR
or Sparta Read by Oscar Fowler. I seem to recall they had some
limitations like they could only work with double density disks. They
should both be at the UMich atari archive.

Preston Crow had some luck with ANADISK which could read anything *IF*
you had the right floppy controller. You needed to flip bits after
reading & he wrote the program DEANA to do that. ANADISK was pulled
from distribution by the owners as they do data retrieval as a
business.

Does anyone have the software that came with the ATR8000? I understand
the discs themselves are difficult to backup. Does anyone out there in
Atariland know how to make working copies of them or have copies they
would be willing to sell?

Right, but the OP was asking for a means of transferring files in and out of
the diskette (or image file).

He said MS DOS but didn't specify density or image file, just
formatted disk.

Otherwise I would have suggested using an emulator. For that matter I
think the original Xformer was MS DOS and it had some limited function
for manipulating disk images. Something like an H: or F: device that
mirrors the PC hard drive.

umich does have some anyway including another by Marslett called
ataridsk. Odd enough, it has anadisk too. Not that it is a must have
but it has been withdrawn from public distribution. If anyone has some
old software they want to pull off disks going back to CP/M you may
want to take a look at it. I seem to recall it is read only.
http://www.umich.edu/~archive/atari/8bit/Diskutils/Transfer/

BTW: There is an old copy of a transfer program I wrote there but
the .exe is broken. It would work on an unmodified 1050 but only
transfers one file at a time. I used Turbo C 1.5 to compile it and it
had a non standard call to do sector based R/W on the IBM side. I'm
not sure if the call is in later versions and I didn't keep a working
copy for myself.

Rick

Yeah, eternal-september's good as well, and I use them for fill-in on a
couple of groups that news.aioe.org doesn't carry. aioe gets my vote
for not requiring an account to use their servers, but either one's a
good choice.

Atari800 has that as well. Runs on MSDOS (among all the other
platforms):

Hiasoft here:
http://www.horus.com/~hias/atari/

has utilities to read/write MyDOS double density files with MSDOS in the PC
5.25 floppy drive; uncertain re: Sparta media capability.

PC XFormer could read from Atari drives with a special cable thru the PC
parallel port; IIRC it required an old Pentium 100 or slower for the timing
to
sync up.

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family

of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, and 800XE personal/home computers, and the Atari XE video game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from 1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

Today, the Atari computer intellectual property rights, along with the home market rights to the Atari trademark itself, are owned by Atari Interactive, Inc., a subsidiary of Atari, SA of Lyon, France.

All Atari 20% Off! All Atari 20% Off! All Atari 20% Off! All Atari 20% Off!

Hi, I'm Ben Smith here in Portland, Oregon USA! Proprietor of Bravo Sierra Computers! Occupying a unique niche in the Atari World! Most Atari Dealers sell NEW, I also sell Used Atari Goods! Not only do I sell NEW Atari Goods at a competitive price, I also sell used Atari Goods you wont find at Swap Meets, Thrift Stores or Auction Sites! And I sell for less! Unlike those remaining anonymous! I test Goods before I sell them. Not only can I sell you some Great New stuff! I can also sell you hard to find 2nd Hand Goods, because I'm the guy people goto to give Ataris a New Home! Saving Orphaned Atari's from Oblivion!Goto http://BensCatalogs.Atari.org or (503)256-9974!

Anybody know where I could get a couple 4464 64x4 dram chips?
They can be used to do the Craig Lisowski 600XL memory upgrade to 64K.
Rick?

I have a couple in SIP vs. DIP if you want to try using them. I was
sure I had some DIPs too but I can't find them. I'll keep looking
because I remember having an old ISA VGA card that used them.

I think the SIPs are 19 pin devices. I don't have a datasheet for them
so I'll assume they have the same signals as a DIP chip.

Rick

I also had some (44164s) on an old ISA video card. I gave the card
to someone who was better at desoldering than I.

Now he and another Atarian both have upgraded 600XLs

p.s. The old video card was a Paradise VGA card (circa 1987).

Thanks Rick, Steve, Bill. I don't know what a SIP vs. DIP is. Sounds
like single inline vs. double inline,
but I'm sure that's not it.
I'll probably order from jameco what Bill found.
Thanks a lot.

I checked that, Russ. It is a utility for combining several small boot
applications
onto a single boot disk with a menu; just efficient use of disk space on the
ATR.

I think he needs the ATR8000 boot CP/M OS or possibly instructions for the
arcane command line procedures to dupdsk it. I got my ATR used and it did
not include any of the CP/M materials.

I don't believe this is what looking for. I found a file called
CPM.ATR. It has a file called
ATARICPM.COM

Accidently hit 'Send'. The .ATR I found has an Atari executable
called ATARICPM.COM and
a couple Turbo BASIC utilities. The ATARICPM.COM boots to a menu
screen to copy
and directory drives. Its title is 'Atari CP/M Help/Copy Program.
And the DOS 2.75 .ATR
has utilities called:
ASCIICON.TUR
CPMTOSTA.TUR
STATOCPM.TUR
IBMREAD.COM
UMONXL.COM
TURBOBASXL.COM
(c) 1987 Lutz Ristau
It doesn't need an AT8000 to get CP/M.

I lost my post. The .ATR boots in AT800WinPlus4. It has some
utilities.

Sould someone point out CP/M w/o an app that you absolutely have to

run sucks?

I mean if your great grandfather wrote his will leaving you millions
using Worstar on a CP/M system it could be worth your while. Likewise
if you want to develop Z80 code it would be a way to get there. I have
done it myself to run a few archaic programs like Hunt The Wumpus and
Rogue. In general CP/M apps are written to do screen I/o via a
terminal type consol so it is like doing word processing over a modem
or playing a bbs door game.

Rick

That sounds interesting; wonder if it has any docs with it?
Where did you find that, Russ? I might want to look at
it just out of curiosity...

Found this old '84 article on the ATR-8000 and CP/M usage:

http://www.retroarchive.org/cpm/cdrom/CPM/ATARI/ATR8000.RVW

Seems the 64K model ATR8000 was required to run CP/M; maybe mine
is the 16K model and that is why none was included. Does anyone know
how spot the difference in the 16K & 64K ATR-8000s?

-Jess

Found this Petter Dassow in Deutschland:

http://www.z80.eu/service.html

who looks like a CP/M guru; if he cannot provide the disks or copy yours
he may know another source from which they could be obtained. Has an
email address on the site.

Well, like I said, the guy never seemed to me to be a thief or
con-man. The problem is that the money I sent him was hard to come by
on my particular budget and I won't be able to get that kind of money
together again to buy a different and reliable 800XL system until
after the winter fuel bills are over next spring sometime.

I understand that poop happens to even the best of businesses. But I
havent received any explanations or any of the money that should be
legitimately refunded to me.

Kjmann - I know you are reading this. What about it?

You could do a money request by PayPal and see if he returns the money? If
he's a decent guy, he would try that.

Noted, thanks.

I can't remember removing an entry before because someone turned out to be
a pure crook, but I wouldn't want to list someone widely regarded as one.
I'm still hoping there's eventually some acceptable explanation for your
unfortunate experience..

A listing in the vendors list shouldn't be taken as an endorsement anyway,
I've certainly not personally done business with everyone listed. Maybe
I'll add an explicit disclaimer to that effect.

That's smart. I wouldn't want to see anyone blacklisted
from a single occurrence. I do agree that a good, simple,
and informative response would alleviate the problem for
the meantime, and it is possible that DB has berated the
guy on the first request for info, but to come into this
public forum to do so is totally wrong. A simple request
to the group for others who may have had issue with him
would not be out of line, but what DB did was just rude.

Bill

Does anyone know if there is an 8-bit Atari emulator that will run
under Windows 7 and that will support the APAC (80x192, 256 colors),or
"HARD Interlacing Picture (160x192, 30 shades of gray) modes?

Steve Wozniak created the "Sweet 16" library for the Apple II. If I
remember correctly, it was 6502 code that simulated a 16-bit CPU. The
code is in the public domain.

Has anyone ported this to the 8-bit Atari?

>public forum to do so is totally wrong. A simple request
>to the group for others who may have had issue with him
>would not be out of line, but what DB did was just rude.

WHAT!?! Did you bother to read my original message at all? I sent the
guy FIVE e-mails over a three month period to get informatiion about
the merchandise or a refund. Kjmann responded the first THREE times
that it would be in the mail a few days followng each message. The
fourth time I wrote him, he responded by telling me that the the
package was actually IN THE MAIL! That was well over a month ago. The
fifth time (last week) he completely ignored me. So I contacted the
guy FIVE times before I came here because it was here that I first saw
his advertisement back in June!

Coming here was a last resort in hopes that Kjman would finally take
some responsiblility for his business promise. I'm still hoping he
will. I'm sorry if I have offended your sensitivities, but tell us
this - what you think keeping $129 after three months without sending
promised merchandise is?

D.B.

I appreciate the info about the transaction and subsequent results.
It isn't rude at all, BD is doing a service as well as making an
effort for Mr. KJmann to give him his money back.
The current KJmann site has almost all hardware 'unavailable', so
apparently he is out of stock.
I found KJmann to be a jerk when he complained about AtariAge posts, I
presume he got some flak
for posting commercials.

Oh, brother. Why would I make such a story up? If I didn't have the
e-mails I referred to, I myself would be liable for a charge of
defamation or libel. Why are you so determined to make me the bad guy
here?

>KJmann, if you are listening. Please give DB his money back so we can

Well, I will agree with you on one thing - there IS at one very rude
person with a pretty snotty attitude "contributiing" to this thread,
only it isn't me...

DB

The reasons for the implementation were gone by the time Atari hit its
stride. Brief history according to Cortese i.e. only approximately
correct and full of personal opinion.

Once upon a time there was the RCA1802 microprocessor. It was popular
for several reasons like low cost and ease of getting a working
system. The best thing about it was its instruction set. It took a lot
of ticks to execute an instruction but they performed commonly used
series of instructions on other processors in a single instruction.
The processor had sixteen 16 bit registers which could be uses as
anything from the program counter to an index register. For the record
it was considered an 8 bit processor since the accumulator was only 8

bits. You had to load the 16 bit registers with a high and a low byte. Operations on the 16 bit registers were 16 bits in that if you decremented the lower 8 bits it could do a borrow from the upper 8 bits automatically.

You may remember a number of years ago John Harris and I made some posts about the relative merits of instruction sets. I *think* he was talking about the 65C816 with its improved instruction set and reduced code space required to do things. He gave an example of memory move that was maybe 40 bytes and I gave the equivalent code for an 1802 which was in the ~20s.

Now flashback to 1978. A big EPROM was 2k. I'm not talking about what would go into a $1,600 Atari or $3,400 Apple but something a ham & egger hacker could afford to put into his homebrew. You have to remember that even 8k *expensive* carts like the Atari ASM/ED came with two 4k eproms in the cart vs. an 8k eprom.

Now there was this early genius of programming called Tom Pittman who wrote a 'Tiny BASIC' that got most of our homebrew computers up and running with a high level language on the cheap. He was able to fit the 1802 version in a single 2k eprom but the 6502 took over 3k to do the same thing. I mention this because back then there were still the processor wars going on and the ability to do things with a single 2k eprom vs. having to buy two or a 4k eprom was good ammo.

So Woz who was a Homebrew Computer Club guy was obviosly aware of alternate processors and the controversy at the time. Being another genius of programming himself and probably having some extra space in the Apple put out Sweet 16. What Sweet 16 actually is a processor emulator tightly based on the 1802.

Now it was a nice<sweet> gesture of him to include the code. That being said nice doesn't mean useful.

The emulator uses something like 800 bytes that can reduce your code by say 40%. If your original program was 1800 bytes of 6502 it doesn't make sense to rewrite it in Sweet 16 which will use 800 for the emulator and the new code will still take up 1080 bytes! Of course if you just want to do something like replace the international character set with it you can actually reduce your code space.

Butt ugly slow. Thing is emulating a 16 bit register on an 8 bit processor is a dog. Something like 1/5th to 1/10th the speed of 6502 native code.

Time took away the need to cram code into tiny eproms and ram. Heck, a 1 megabit cart would be the way to go nowadays. Maybe doing something like a rewrite of a 1050 eprom would free up 1000 bytes in a 4k eprom but I just don't see that as a something people would spend their time on.

Funny thing is I just built an 1802 system this summer on a

breadboard.

It's actually an interesting topic but more about what instructions
should be in a processor instruction set. For instance if you have an
instruction in the microcode that stores via a pointer register and
automatically decrements the pointer register all memory moves are
tight and fast. The pointer register should be as wide as the
addressable memory and there should be at least two of them. Also
makes things like a C compiler using pointers for everything from
variables to memory moves almost trivial.

Rick

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, and 800XE personal/home computers, and the Atari XE video game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from 1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

Today, the Atari computer intellectual property rights, along with the home market rights to the Atari trademark itself, are owned by Atari Interactive, Inc., a subsidiary of Atari, SA of Lyon, France.

NEWSGROUP BACKGROUND

comp.sys.atari.8bit was created in November 1986 (as part of the Great Renaming) as a direct replacement for: net.micro.atari8

comp.sys.atari.8bit is unmoderated, and has no formal newsgroup charter.

The comp.* hierarchy of Usenet newsgroups is managed by the Big-8 Management Board: http://www.big-8.org/

RELATED USENET NEWSGROUPS

alt.binaries.comp.atari8bit

Programs for Atari's 6502-based orphans.

comp.sys.atari.advocacy
Attacking and defending Atari computers.

comp.sys.atari.announce
Atari related hard/software announcements. (Moderated)
Moderator: Kevin Savetz

Plug-in Enhancement/Expansion unit for all NTSC/PAL/SECAM Atari 7800

Video Game console systems.

Adds the following:

=95Built in High Score keeping capability (compatible with approx 20
existing titles and any HSC coded games/programs in the future)
=95128K of Program Available Memory
=95POKEY audio/interfacing IC Chip for enhanced audio/voice synthesis
and I/O Interfacing capabilities.
=952nd Audio Processor for higher end Arcade sound effects and music
=95SIO (Serial I/O) Port for potential future use of Atari 8bit computer
peripherals such as Disk Drives, Printers and Modems.
=9515 PIN Port for potential future use with a detachable computer
keyboard.
=95Will come professionally boxed in original Silver styled "Atari XL"
type box with extensive User Guide and Technical Data manuals.
Cartridge Port ontop to allow all 2600/7800 cartridges to plug onto
the unit to play games/programs.

Please DB,

look at this from his point of View!He's not going to get rich selling Atari!
Atari Dealers are a vanishing breed! Heed my Advice!If you keep attacking him
publicly in the NewsGroups, you'll hurt him, maybe put him out of Business!

How will this help you? You'll need his Business to prosper so he can pay you Back!It would be better to forgive his debt, do unto others as you would have them do unto you! Unload your Burden! You'll feel much Better! Thanx! =-Ben-=

All Atari 20% Off! All Atari 20% Off! All Atari 20% Off! All Atari 20% Off!

Hi, I'm Ben Smith here in Portland, Oregon USA! Proprietor of Bravo Sierra
Computers! Occupying a unique niche in the Atari World! Most Atari Dealers
sell NEW, I also sell Used Atari Goods! Not only do I sell NEW Atari Goods
at a competitive price, I also sell used Atari Goods you wont find at Swap
Meets, Thrift Stores or Auction Sites! And I sell for less! Unlike those
remaining anonymous! I test Goods before I sell them. Not only can I sell
you some Great New stuff! I can also sell you hard to find 2nd Hand Goods,
because I'm the guy people goto to give Ataris a New Home! Saving Orphaned
Atari's from Oblivion!Goto http://BensCatalogs.Atari.org or (503)256-9974!

snip BS from BS.
I'm sorry to hear about KJmann's theft of BD's money.
He's a thief, plain and simple. I have no sympathy toward him. BS is a reason why csa8 has very few
posts. His spam turns off just about everybody. You come to csa8 and see eight spam from BS
and no new posts. BS has single handedly trashed this newsgroup.

>... You'll need his Business to prosper so he can pay you

>Back!

I gotta admit, this is the most novel and convoluted justification for stealing I've ever heard of. Tell you what BS - keep the next $129 for orders you receive but don't send the people the merchandise they ordered. You can bet we will be reading about you in here then...

>It would be better to forgive his debt, do unto others as you would have
>them do unto you! Unload your Burden! You'll feel much Better! Thanx! =-Ben-=

How come this just works for me? Why don't you say the same things to the guy that took the money? Why doesn't he "unload his burden"? Why don't you advise him to "do unto others" I DID "do unto others" - I sent him the money. Now, it's his turn to "do unto me" by sending me the merchandise.

Man, I'm really confused how it is that I send a merchant that I found in this very group what for me is a LOT of money in good faith who then stiffs me, and I in turn become the bad guy!

But there's something else you might consider. Instead of defending and justifying bad merchants against the Atari community, you should be supporting the Atari community by helping to make sure that bad merchants don't drive people away.

I'll tell you what though. From now on I will only shop for Atari stuff on eBay. Their prices might be high and their selection limited, but at least they have a shopper protection program. And that should make an on-line merchant like you think twice about supporting theft as a legitimate business practice...

Dave B.

<snip>

As you said, "ship has sailed" but were you still interested in things
Atari 8 bit? I may have an extra beater system floating<literally>
around here somewhere I could give you. Beater =3D> no RF shield and far
from pristine. I could toss in an SIO2PC cable *IF* you have a PC with
a serial port, kind of useless if you don't. ATM I don't have a
joystick but they could probably be had local to you for less then it
would cost to ship anyway. I'm not as anti emulator as I used to be
but nothing beats real hardware.

Yeah, occassionally you get burned. I bought a 65816 system and the
seller flaked on me. Freaking knocked the wind out of me for a while.
Operant Conditioning kind of thing. This is the only place I come for
abuse now, I don't even hang out on web forums anymore because of all
the hankie fights.

BTW: I think the system he was selling was S-video vs. SVGA, not quite
the same thing. There is a SVGA mod but it reflects the current
prototyping climate and prices. It's not uncommon for printed circuit
board manufacturers to charge $50 per board now and that is ~3"X5"
size. Anything significant you buy new now will probably be >$80. I
think the only exception is the SIO2PC USB cable.

Rick

_I_ don't... because I have his posts in my Usenet reader's killfile. ;)

No offense Ben... I'm just not in the market to buy Atari stuff very
often, and I did feel that the posts were too frequent. I _am_ glad
for the fact that you (and BEST and B&C and kjmann) out there though!
I know where to find all of you when I do need something. :)

I also appreciate that you helped me out with my first Atari Party
by lending me some hardware!

Hello. No I'm not dead yet. just some more complications concerning my
health issues.

Thanks to Bill for alerting me to this discussion.

As for Dave B. I have no problem with his being pissed. I would be if
I were in his position.

Thanks for standing up for me Ben (BSC) but there is no Excuse to just
take someones money and that has never been my intention.

I did finally get back the first system I sent him. I was waiting for
this because God knows there are people out there who just want
freebies and that would keep claiming that they didn't get it to see
h9ow much they could get me to sent them. Obviously Dave is NOT one of
them, though I did need to be sure after sending the second system.

I have repackaged his system and shipped Via UPS this Time instead of
the US postal service. I'm not happy at all with what's been happening
with the USPS service as of late. The system came back saying they
were unable to deliver it. whatever the hell that means. Part of this
is my own fault for not shipping using Delivery Confirmation.
although, I have always found the tracking info from the USPS to be
somewhat skimpy and for the most part a joke.

Dave I have a tracking number for you from UPS I'm thinking I should
just start shipping everything Via UPS. but, that means that smaller
packages would cost more to ship. That is my only issue.

Hope this clears some things up. Take care.

snip stuff from kjmann.

The customer wants his money back. I believe you're not only a thief,
but SURPRISE, you're a liar as well.
There's no way you sent a package USPS and didn't get it back for four
months. You stopped answering
DB's e-mails a month ago, or were you away taking care of your sick
grandmother?
I offer a stock 800XL, in fair stock condition, all keys work, etc.
and a power supply and SIO cable.
Take Rick up on the SIO2PC cable (if you have a serial port), and you
won't need a floppy drive.
DB can find lots of Atari software online and can use it with the
SIO2PC cable. He might need
to buy APE software, I'm not familiar with SIO2PC software. Also
would need a monitor cable and
monitor, although TVs come with composite and audio ports now. Like

Rick says, SVGA is not
very likely.

So glad to hear that ... I felt bad for Atarians, and sorry to say, I was
really hoping you were sick (not really, but that's a good excuse). kjmann,
hope you feel better and thumbs up for you.

Now feel happy for both of you :-)

Take Atarian care

I'm not necesarily "pissed", but I do want a proper resolution to this
mess.

>I did finally get back the first system I sent him. I was waiting for
>this because God knows there are people out there who just want
>freebies and that would keep claiming that they didn't get it to see
>h9ow much they could get me to sent them. Obviously Dave is NOT one of
>them, though I did need to be sure after sending the second system.

I really have little to say on this score. i live in a very small town
(less than 3000) and for at least 10 years both myself and my wife

have been on a first-name basis with the Postmaster of our town who lives and works in the small post office across the street. If these packages were returned it means they did NOT reach this PO.

I would also just like to say that this whole mess could have been completely avoided by a simple explanatory e-mail to me over the course of August or September. While I realize there are health issues of concern here, I feel very strongly that an e-mail could have been sent during the six weeks I waited to hear from you. I am not an unreasonable person and would have completely understood if there were extenuating circumstances preventing you from completeing the transaction. As it was, the last message I got was in July stating that you were "back in charge" and had sent out the package. In point of fact, I still haven't received any further e-mail from you - the only thing I know is what you said just now to the group. It kind of makes one assume that you are spinning a little "damage-control" here, and what the group thinks is more important than what your customers might think. Might I just suggest that if you are thinking of resuming your mail-order operation, you might consider tweaking your business practices a little.

However...

As far as I am concerned, if you have actually sent the system and it actually gets here and it actually works, I will be a satisfied customer. All I ever wanted was the computer. Now it's true that the summer is shot and my original purpose for getting the system is now moot, but as someone previously pointed out "that ship has sailed". So be it. I am not one to hold grudges or to seek revenge for imagined slights. This matter is closed - as long as I get my order.

I would like to mention here my most sincere thanks to Rick and russg for their much appreciated support and extremely kind and very generous offers of equipment. Now THIS is the Atari community I remember from my days as an 130XE owner back in the mid-80's. Over the years I have had several computers - I started with a TI-99 and moved to an Apple IIe in the early 80's moving to a 130XE in 1986. More than any other machine I enjoyed the Atari the most primarily because of the unyiellding enthusiasm for the Atari range of 8-bitters in the face of declining software and corporate support. While the Atari product was good, it was guys like Rick and russg that made it fun and meaningful. Thanks to you guys very, very much.

Now, my task when the computer comes is to convert Halo into an Atari 800XL Action! program. I'll make a fortune.

Or not...

Dave B.

Posting-Frequency: 10 days
Last-modified: April 26, 2010

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, and 800XE personal/home computers, and the Atari XE video game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from 1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

Today, the Atari computer intellectual property rights, along with the home market rights to the Atari trademark itself, are owned by Atari Interactive, Inc., a subsidiary of Atari, SA of Lyon, France.

Any one out there. I was in the Local scene in the 8-bit and 16 bit back in the late 80's and mid 90's. I was know as Bone or Boner. Went to Buckskin BBS, Gateway BBS, Frog and a few others. Always happy to hear what happened to my few Atarians.

Right. Because a 2000 year old fairy tale excuses what happened here.

TBH, I rarely come to this newsgroup any more precisely because of
BSC, the only time I ever bought anything from him (an XEP80), it
never worked anyway. These days I DIY...

Weren't the Ratcliff brothers from St. Louis? I heard MatRat passed on
and I haven't heard what his brother has been doing since 688 Attack
Sub.

Don't want to start a debate or flamewar here (inappropriate forum), but
some of us do believe...

So lets keep the topic "Atari" and lets all enjoy these wonderful machines
we love and care about so much! :)

I don't know Ben, it was a few years ago now - around 50 or 60 bucks I
think. I remember it was supposed to work...

I just chalked it down to experience, and decided to strike you off
the list of people I buy from - IIRC, you said it was tested before it
left, so ...

> Don't want to start a debate or flamewar here (inappropriate forum), but
> some of us do believe...

If people keep their religion to themselves we all get along, but when
you use it to justify something you can expect that action to generate
friction between those who do and those who don't believe in a deity.
I'm generally happy to live and let live, but it's as annoying to me
to see someone use an IMHO bogus religious justification for their
actions, as I expect it is for you to read my retort about fairy
tales. In other words, those who live in glass houses ought not throw
stones...

Hey, Russg,

Your header contains the following line:

 > Organization: http://groups.google.com

So maybe you can try to explain THAT away.

And then you have the gall of making a snide remark about who is trashing
usenet, and who is saving it. Why don't just newgroup your own private
newsgroup inside of Goodle, and see who comes and joins you.

Regards,

ESC_Beta@nullo2nullo.net

What is this Goodle thing? :)

Heck, not sure just what exactly you're taking exception to? I'm using
Google's newsgroup reader myself. It is my understanding that more and
more ISPs are dropping usenet/newsgroups so eventually most people
will have to read it from either a web based reader, web site echo, or
maybe their own linux box.

Subjective but I am a fan of the way things were ~15 years ago too.
There's still a couple of us trying to fight the good fight but I know
it is a lost battle. I can still remember when there was going to be
a .biz for anyone who wanted money to change hands. It was a miserable
failure for several reasons, not the least of which was people wanting
to make a buck ignored it because "nobody goes there." Now everything
is officially .com<mercial>.

In a few billion years the earth will be engulfed by the sun anyway.

Rick

I inherited a fellow's Atari 8-bit collection. I was trying
out the 800 I got last night, and my son was smacking at the
keyboard a little too vigorously.

The system turned off [lesson learned: don't beat the computer].
I looked and it seems that the cartridge door is a little loose
or bent, so the little switch inside that turns the computer
on/off when you close/open the door loses its contact.

What's the best way to fix this? Or is it trivial to hack the
thing so that it always stays on. (I've seen an 800 set up to
do that. Less safe, but more convenient, esp. if you're doing
nastry tricks with the cartridge ports, I guess...?)

Thanks!

SOP at the time was leave the hood open and stick a pencil in. I'm
sure you could come up with something more elegant.

BTW: Check out what processor board you have in it. Not that you would
want to *BUT* if is a 6502B then you can substitue a 65C02.

Rick

 What I did was install a switch, one more of many on my 800 for the Lid
Switch, real easy to do.

All Atari 20% Off! All Atari 20% Off! All Atari 20% Off! All Atari 20% Off!

Hi, I'm Ben Smith here in Portland, Oregon USA! Proprietor of Bravo Sierra Computers! Occupying a unique niche in the Atari World! Most Atari Dealers sell NEW, I also sell Used Atari Goods! Not only do I sell NEW Atari Goods at a competitive price, I also sell used Atari Goods you wont find at Swap Meets, Thrift Stores or Auction Sites! And I sell for less! Unlike those remaining anonymous! I test Goods before I sell them. Not only can I sell you some Great New stuff! I can also sell you hard to find 2nd Hand Goods, because I'm the guy people goto to give Ataris a New Home! Saving Orphaned Atari's from Oblivion!Goto http://BensCatalogs.Atari.org or (503)256-9974!

It definetly rings a bell with me. Can't say where it is though.
I would have to dig through my 8-bit stuff.

I believe you should get some communication from Atarimax about your
order.
He is well known and trustworthy, but maybe you should go to Atarimax
and
try to send him an e-mail.

order.
He is well known and trustworthy, but maybe you should go to Atarimax
and
try to send him an e-mail.

Yes, thats what I'll do.

I just thought, that maybe someone else had written some different software
for these devices.

thanks,

It was part of AMS song (Advanced Music System). The song was one of
several popular ones that were part of the demo showing it off. Others
included "Thriller" and the "Star Wars Cantina."

Should be easy to locate.

I remember that! It seemed very impressive at the time. I once used it
as a jukebox at a church activity.

I seem to recall there was ~a hand drawn doc that circulated for making your own 34 pin to 50 pin conversion so you could use 8" drives with an ATR8000. I've googled it quite a bit but only ended up wasting a couple of days. I even found some stuff that looked just plain wrong and dangerous. Does someone have the correct doc for this?

I did find SWTP made an adapter board and someone sells a board that's supposed to do it for a small fortune.

I could just wing it but have you seen the prices for some of this junk on eBay? I can't believe any of this is selling but they are asking $300-$600 for 8" drives and you can't touch a used 3.5" 720k for under $100. I think I may gut my 520 STs!

I forgot how feeble the low level IBMs were and how weak a bunch of my junk is. I still have some ~sought after stuff like a Microsolutions CompatiCard I but I had forgotten the only way it could access anything other then a 720k drive was to load a driver. My eprom burnner needs an ISA slot so it has been a comedy of errors. I have several spare system MBs with ISA slots ranging from a 10 mHz 8088 to 500 mHz K6. The new copy of DR DOS I bought to run the burner came on 1.44 meg disks so matching a MB to disk controller to floppy has been an adventure in 8-16 bit vga cards and everything from an genuine IBM 10 meg MFM hard drive to a 6 gig IDE.

SCSI has been a disaster, 3 broken 8 bit controllers and 3 broken drives. Only have 2 PCI controllers and one of those is so old Win XP refused to install it. Error message was something like "Go back to Windows 95 loser!"

I'm kind of leaning towards a 33 mHz 486DX for my development system but the MB doesn't have anything built in. Only working 16 bit hard/floppy controllers I have are MFM. I may have to make a run to Halted Specialties or Weird Stuff Warehouse so I can set it up right. Things are good, kind of nice to remember how good DR SID and editor were. Loaded Viewmax<ST GEM style interface> but it only recognizes serial mice.

Rick

It isn't necessary to do a WSYNC (D0A).

This'll work.

```
0590  *=$600
0600  LDA  $D200
0604  ADC  $14
0606  STA $D018
0609  LDA  $D40B
0610  SBC  $14
0611  STA  $D01A
0614  LDA $2FC
0620  CMP #$FF
0630  BEQ $600
0640  LDA #$FF
0650  STA $2FC
0660  RTS
```

Hey Rick,

Long time since we last chatted.

Though not specifically for ATR8000 these links should help.

http://www.retrotechnology.com/herbs_stuff/34_to_50.txt
http://www.classiccmp.org/dunfield/img20385/cnct.htm

A bit off topic but I'm wondering if this will enable the use of 3.5"
HD drives on our ATR8000s.

http://majzel.blogspot.com/2009/04/converting-from-8-to-35-inch-floppy.html

And completely off topic I finally found a fix that allows me to use
both my SIO2PC interface (MAX233 based) and the ATR8000 at the same
time. I read about it somewhere on usenet a few years ago but can't
seem to find it again. Just add a 2K resistor at SIO-5 (data out) and
SIO-7 (command) on the SIO2PC interface.

Thanks Steve, once again you are a life saver.

I was thinking the same thing and went so far as checking to see if I had any Mode 3 floppy drives but no love. There are a couple of sellers on eBay that have that exact drive and there seems to be a few other models that work Mode 3. I'd guess you just have to treat it like a DSDD 77 track 8" drive from MyDOS, use 1.44 meg disks, and you get ~1 meg formatted capacity but you probably have figured that out or something better.<grin> The old 1.2 meg 5.25" disks are supposed to work Mode 3 too but good luck finding floppies.

I'm kind of going through an advanced state of confusion vs. bucket list. I've got to see an 8" drive hooked up to my ATR8000<bucket list> but the way to go and what I should work on is a direct attached SD card. Not sure if I should just hang it off a j/s or put it under the hood. Stuff I've been reading makes it seem like a simple serial type data stream for the SPI mode will do.

Rick Defelson<?> or something close. The 'Rick' part is right but I'm not sure how to spell the last name. He's still around and has a web page. But yeah, both the MAX232 and 1489 have load resistors on the chip. Sheesh! Just found it while I was looking for the equivalent circuit for the 1489.
http://www.a8maestro.com/atari/info/virtsio/pic1489.jpg

Anyway, the 1489 <and MAX232> have on chip ~4k of resistance going to the middle of a resistor divider network to keep from oscillating when nothing is hooked up. IOW: They are always presenting a load either

pull up or down respective to the SIO data lines. Really it would have
been better to use something like a LM324 op amp but hind sight is
20/20.

The ATR8000 w/ SIO2PC was a thorn in my side for a long time.

I'm not sure I understand your description of loads but the ATR8000
becomes invisible when an unmodified SIO2PC is connected to the chain.

The 2K resistors did the trick for both the MAX233 interfaces and my
14C89 one though the 14C89 one no longer worked at 3X SIO with the
long 25 foot cable I have. Shorter cable was working but
tempermental. MAX233 is perfect so I dumped my 14C89 interfaces.

Rick Detlefson is a great guy. Sold me a nice SDrive kit (then I made
a stripped down one from scratch). He also helped me with another age
old wish (not quite a bucket list though). I just couldn't get 1.2MB
floppies working on the ATR8000 on my own. Can't remember the tip
(maybe change DOS versions) but until whatever the change was it had
never worked for me.

I wonder how long it will be until I get a 1.44 up and running.

Take care Rick, and good luck with that 8" monster.

Steve Sheppard

I see some effects of deleting STA $D40A some breaks in the lines.

No big thing, you know how SCSI, MFM hard drives, some floppy drives,
needed one set and only one set of terminating resistors? RS232 has a
similar type of spec in that the originating device expects a load
resistance on the reciever end. The resistors are in the silicon of
the MAX and 1489. If you measure the voltage on an IBM style serial
port INPUT you will find it actually has a voltage on it instead of
floating because of the on chip resistors are wired to V+ and ground
pins. They also have series resistors on the outputs and inputs to
prevent you from burning them up should you short them to ground or
+V.

IOW: It already has pull up resistors on chip, just that they are the
WRONG values!<grin>

I seem to recall the 1489 could handle ~dead short to ground on all
outputs while they were being driven high w/o burning up. That was

really the thing that made it an appropriate for target users on the
Atari. Ditto for the MAX232.

I think it was you that sent me schematics, I'll take a look at them
and see if I can figure out what goes on with an ATR8000.

I'm guessing you are using paddle values as they get increased for the
scroll? Do you have a paddle controller you can plug in to see if that
effects the output?

First time in ages I hooked up a real Atari. Yes, paddle 0 effects
the scrolling, just makes
a blinking display instead of the rainbow.
APE for DOS won't work with Windows XP, even in SAFE mode, the serial
port won't work.
I had to boot PC DOS from a GHOST disk to get APE 1.18 to work with my
APE/PRO
adapter. I never did use paddles for anything.
I don't know why $D200 is used, actually, $14 is the jiffy clock,
which gives a different
value for the color to change to. I got the program from a Atari Logo
BASIC program,
makes the Atari logo rainbow with a down rainbow outside the drawto
fill box.

In the ones I posted I used VCOUNT which is just the scan line divided
by 2 IIRC. I'm not sure about all the details but I think it takes
262/2 scan lines into account with overscan. I thought the POT
routines were tightly linked to scan lines too but only go to 228?
There's also a fast read POT enable that was used for things like
digitizing speech but I never used it myself.

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, and 800XE personal/home computers, and the Atari XE video game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from 1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

Today, the Atari computer intellectual property rights, along with the home market rights to the Atari trademark itself, are owned by Atari Interactive, Inc., a subsidiary of Atari, SA of Lyon, France.

Subject: [ATARI NEWS] Nolan Bushnell

Hi,

Read on <http://www.edge-online.com/news/bushnell-rejoins-atari>

Bushnell rejoins Atari

Nolan Bushnell, the 1972 co-founder of Atari, has joined the new
company=92s Board of Directors.

Bushnell has created over 20 companies since the original Atari and has
been inducted into the Video Game Hall of Fame and the Consumer
Electronics Association Hall of Fame.

Also joining Atari's Board is Tom Virden, a "seasoned executive in the
online leisure, technology and travel businesses who will bring Atari
his strong knowledge of online business and e-commerce."

Bushnell said: =93I am very excited to be reacquainted with Atari at a
time when it is poised to make interesting strides in key growth areas
of the games industry. The company and its iconic brands have always
been important to me, and I look forward to further guiding them at the
board level.=94

Other notable changes to the Atari Board include the departures of
previous CEO David Gardner and Phil Harrison, who have both resigned
from their Board roles.

Atari said that the two Board appointments come at a time "when Atari
has increased its focus on its iconic brand and world-renowned game
franchises while further expanding its business online."

ATARIstically yours =3D)

Shoulda had a PLA at the beginning, keep the stack right.
Add a 104 at the beginning of line 1000 DATA and make N=3D1536 TO
1536+34 at line 10.

Those folks really did know what they were doing when they designed
these little guys. :)

(I had a Parrot for a long while, BTW :))

Hi,

Do you know that France is a beautiful country ?
I'm sure Nolan Bushnell will really enjoy the trip.
I know California myself. It supports the comparison :-)
I watched recently "2012" on the PlayStation 3. The time
is not yet come to think about those big catastrophes.

This is in facts, a real good ATARI News, indeed !

Best regards,

Online Training in SQL DBA

Maripax Offers Online Training in SQL DBA

Experience online training! Experience as you are in home while you learn something important. No need to search for coaching centers. Your trainer is just ready on your computer.

Save time! Because time is precious. Don't worry where you are from? Connect to internet and learn in the best way! We look for the things what you really need! We train you to make you best in industry.

If you are excited about technology, it is enough from your side. We take care of remaining. We train what you exactly need. We train to make you best in industry.

Either you are beginner or professional, our course content is designed rationally after evaluating so many factors in course-framing decision making system. To train you and to make you best in industry is our passion, our socio-economic service, our contribution to the IT

industry.

Break the barriers. Build technology around you, for you, from you. We there for every new technology. For every new technology we train IT aspirants. Experience technology-learning by us that makes any thing possible by eradicating the statement, "is it possible?!" Never lack a single step in IT training.

Dedication in quality is primary norm of us. No matter what the subject it is, Quality is what we make it as deep as ocean depths and as high as mountain peaks. Just feel our quality experience from any where! Your investment in time and money is very valuable. We know this point and make you the best in industry.

Once again, Join now and feel what quality is and what harmonious experience it is?
Join with us and start your creative thinking and make things innovative.

Course Content:
SQL Server 2008 Administrator (DBA)

1) Introduction to Microsoft SQL Server

a) Microsoft SQL Server 2008
b) Various Services
c) Editions

2) Installing SQL Server 2008

a) Verify prerequisit es.
b) Create an instance.
c) Configure SQL Server 2008 instances and databases.
d) Configure log files and data files.
e) Configure SQL Server security.
f) Configure server security principals.
g) Configure database securable.
h) Configure encryption.
i) Configure linked servers by using SQL Server Management Studio (SSMS).

3) Creating and Implementing Database Objects

a) Implement a table.
b) Specify column details.
c) Specify the filegroup.
d) Assign permissions to a role for tables.
e) Specify a partition scheme when creating a table.

f) Specify a transaction.
g) Implement a view.
h) Create an indexed view.
i) Create an updateable view.
j) Assign permissions to a role or schema for a view.
k) Implement triggers.
l) Create a trigger.
m) Create DDL triggers for responding to database structure changes.
n) Implement functions.
o) Create a function.
p) Identify deterministic versus nondeterministic functions.
q) Implement stored procedures.
r) Create a stored procedure.
s) Recompile a stored procedure.
t) Assign permissions to a role for a stored procedure.
u) Implement constraints.
v) Specify the scope of a constraint.
w) Create a new constraint.
x) Implement indexes.
y) Specify the filegroup.
z) Specify the index type.
aa) Specify relational index options.
bb) Specify columns.
cc) Disable an index.
dd) Create an online index by using an ONLINE argument.
ee) Create user-defined types.
ff) Create a Transact-SQL user-defined type.
gg) Specify details of the data type.
hh) Implement a full-text search.
ii) Create a catalog.
jj) Create an index.
kk) Specify a full-text population method.

4) Data Management in SQL Server 2008

a) Import and export data from a file.
b) Set a database to the bulk-logged recovery model to
avoid inflating the transaction log.
c) Run the bcp utility.
d) Perform a Bulk Insert task.
e) Import bulk XML data by using the OPENROWSET function.
f) Copy data from one table to another by using the SQL Server 2005
Integration Services (SSIS) Import and Export Wizard.
g) Manage replication.
h) Distinguish between replication types.
i) Configure a publisher, a distributor, and a subscriber.
j) Configure replication security.
k) Configure conflict resolution settings for merge replication.
l) Monitor replication.
m) Improve replication performance.
n) Plan for, stop, and restart recovery procedures.
o) Implement and maintain SQL Server Agent jobs.
p) Set a job owner.

q) Create a job schedule.
r) Create job steps.
s) Configure job steps.
t) Disable a job.
u) Create a maintenance job.
v) Set up alerts.
w) Configure operators.
x) Modify a job.
y) Manage a job

5) Basic Database Management

a) Manage databases by using Transact-SQL.
b) Manage index fragmentation.
c) Manage statistics.
d) Shrink files.
e) Perform database integrity checks by using DBCC CHECKDB.

6) Disaster Recovery
a) Back up a database.
b) Perform a full backup.
c) Perform a differential backup.
d) Perform a transaction log backup.
e) Initialize a media set by using the FORMAT option.
f) Append or overwrite an existing media set.
g) Create a backup device.
h) Back up filegroups.
i) Back up a database.
j) Perform a full backup.
k) Perform a differential backup.
l) Perform a transaction log backup.
m) Initialize a media set by using the FORMAT option.
n) Append or overwrite an existing media set.
o) Create a backup device.
p) Back up filegroups.
v) Choose an appropriate method for moving a database.

7) Implementing High Availability and Disaster Recovery

a) Implement database mirroring.
b) Prepare databases for database mirroring.
c) Create endpoints.
d) Specify database partners.
e) Specify a witness server.
f) Configure an operating mode.
g) Implement log shipping.
h) Initialize a secondary database.
i) Configure log shipping options.
j) Configure a log shipping mode.
k) Configure monitoring.
l) Manage database snapshots.
m) Create a snapshot.
n) Revert a database from a snapshot.

8) Monitoring and Troubleshooting SQL Server Performance

a) Gather performance and optimization data by
using the SQL Server Profiler.
b) Start a new trace.
c) Save the trace logs.
d) Configure SQL Server Profiler trace properties.
e) Configure a System Monitor counter log.
f) Correlate a SQL Server Profiler trace with System Monitor log data.
g) Gather performance and optimization data by using the Database
Engine Tuning Advisor.
h) Build a workload file by using the SQL Server Profiler.
i) Tune a workload file by using the Database Engine Tuning Advisor

Oracle Apps DBA training (11i & R12/12i) is now available from 03 Jan 2008. This course in available via web conference (weekends or late evening) with hands on exercise on installation/patching/cloning.

Key topics in training for Oracle Apps DBA=92s
- Architecture, File System and important files
- Installation of 11i/R12
- Patching
- Cloning
- Upgrade
- AD utility

Course Content

Architecture and Overview of Oracle Apps 11i/R12
- Architecture of Apps
- Components in 11i & R12
- 11i & R12 File System including important files

Installation of Oracle Apps
- Single/Multi Node Installation
- Single/Multi User Installation
- Hands on Installation of 11i / R12

Patching
- Database Patch
- Apps Patch using adpatch
- adpatch options
- Hands on practice for patching
- Frequently asked interview Questions in patching
- Startup/Shutdown Apps & DB

Cloning
- Overview of cloning
- Hands on rapid clone
- Advanced cloning options

AD Utility, Autoconfig and other
- adadmin
- Auconfig
- License Manager
- adident
- OAM

Upgrade
- Upgrade scenarios

Key benefits of Online training from us
=96 Hands on practice/exercise including installation, patching, cloning
=96 Technical support for next 2-3 months
=96 Learn at your pace with flexible hours
=96 Learn from leaders in Apps DBA domain

Thanks & Regards

Too bad it requires a plugin that is not compatible with the computer I
am using. :(

Nice thing about Blip.tv (at least the way Robert uses it), is
that you can download the source file. I grabbed the WMV and

skimmed through it just now.

Feedback to Robert: it's quite a bit of the raffles. I'd have liked
to see more focus on the games and the people playing them, than me
hollaring numbers out at the crowd. ;)

Mind if I remix it to make a little mini-video based on this?
In any case, thanks! :)

to my knowledge, I have never said anything about anyone's wife or mate
in this group or any other. and i have only used the atari groups to post
in
except for a few posting in a stamp discussion group.

someone went way to far, and they don't know what they did.

Hmm, I think, in the bottom right hand corner of the viewer you can pick
".WMV"...

HTHs.

I was able to play it under Linux.

Me too - always, always wanted to attend one of Toads "Fests" and actually
planned on going, and the year I was planning to go, they stopped.

What I got for waiting. :(

If I win the Lottery, I WILL go to one of Bills! :)

>Dunno about 68000 code, but 6502 code here:
> http://mdfs.net/Info/Comp/6502/ProgTips/DayOfWeek

 That code is slow & dirty. On the one hand it assumes: that
 all dates are stored in non-standard fashion in 3 bytes, rather
 than 4 as CYMD (but if there's an over-riding constraint to store
 dates in 3 bytes, one may store the 1st digit of the century in
 the upper 3 bits of D, and the 2nd in the upper 4 bits of M); and in
 the alternative, that CY is to be pre-processed by subtracting 1900
 before passing the result to register Y. The latter is cheating--
 if that's acceptable, then one ought to cheat properly by looking up
 the Century offset in the offset-table, summing it with D, and then
 passing the sum to the subroutine when called. As 'month'<13, and
'century'>14 for Gregorian dates, both tables may be combined into
 one. Century offsets may be found at:

http://de.wikipedia.org/wiki/Wochentagsberechnung#Jahrhundertziffer

 This has the added benefit of the year register always being less
 than 100, so that there's no need to test for Century 21. Further
 improvements could be realised by rewriting the code to eliminate
 the need to invert register A, due to A's total sum always being
 less than 100. This will yield another benefit: to have the code
 also work for dates in BCD. The code can thus be streamlined to
 have a wider range of applicability, yet use fewer clock cycles.

>You didn't ask for Julian number, you asked for day of week.

I didn't ask for the day of week either. I'm telling how to find
the weekday number in a different, if not better, way.

Noticed that too - I figured something got cross-posted accidentally or
something like that.

Its probably all good.

Here is the original which still works with the PC for free, they all
use the same SIO2PC cable.
http://pages.suddenlink.net/wa5bdu/sio2pc.htm

ACVT image converter that runs on the PC, converts between
800xldj's .di files and more common .ATR files for example.

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, and 800XE personal/home computers, and the Atari XE video game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from 1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

Today, the Atari computer intellectual property rights, along with the
home market rights to the Atari trademark itself, are owned by
Atari Interactive, Inc., a subsidiary of Atari, SA of Lyon, France.

Tin Lunchbox schrieb:
> I think the best straight Atari BASIC compiler is Datasoft's ABC
> compiler. Anyone disagree?

Yes - because it depends on what you need. ABC does not compile to
assembly, but to a p-code which is then interpreted. The second problem
is that ABC only supports integers (24 bit integers, specifically), and
thus any type of floating point math is out. For many applications, this
is enough, but not for all.
The advantage of ABC is that you can reconstruct the basic program from
the pCode, thus de-compilers are available. It was also commercially
successful, a couple of Microprose games have been compiled with it.

If you need floating point, well, the TurboBasic compiler wasn't bad, it
just required a larger runtime.

So long,
     Thomas

Pardon me for being over 30 when we got our first 400 and
now completely out of the main stream, but what is an
'SMF based board' and where would one find your board?

-Jess

It's hard not to use personal examples to agree with you. If you get
here from google groups, there are ~288 c.s.a.8 members using their
interface, me too. I started an SMF based board about ~2 months ago so
I'd have a place to post personal junk and so far I have had to BAN
over 1,200 users and have 400 members who haven't given me reason to
ban them yet. I figure 90% of them are bots or spiders. That's
certainly where the people are and abuse is rampant.

IF you just want to compile straight Atari BASIC code, I had the MMG
compiler and thought it was quite good. It has the option of compiling
either floating point or integer. You could also save the assember
source code but it wasn't very useful except to see how they did their
magic. I seem to recall the MMG was a derivative of another, maybe
even the ABC. You really needed a double density disk ~180 of storage
to do anything useful with it though. I compiled some terminal
programs with it and had no trouble getting 2400 BAUD from a compiled
BASIC program.

SMF =3D> Simple Machines Forum just a prerolled message forum. Kind of
like the Red Hat of forums.

http://www.ataricorpse.com/

Yes, I have a black sense of humor that you may not find funny.<grin>
By my own admission it's pretty sucky excuse for web space. There are
excuses and there are reasons. Mostly fortunate time burner reasons
like grandkids birthday parties but it takes time away from coding and
soldering to ban 1200 people!

Hello:

There are a few basic compilers out, like CMP and there is another
one, my old mind cant remember that I have. I tried compiling games or
compiled a Sieve of The Greek guy(I am a bad speller) and it made some
work a lot faster but mad some games so fast they were not playable.
So find a Sieve program and compile it and see what makes things run
faster. Other than that if you are looking for compilers, let me know,
I can make Atari Image Files of any of them.

I love my APE interface

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, and 800XE personal/home computers, and the Atari XE video game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from 1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

Today, the Atari computer intellectual property rights, along with the

home market rights to the Atari trademark itself, are owned by
Atari Interactive, Inc., a subsidiary of Atari, SA of Lyon, France.

Just saw this fly past the Yahoo! News alerts:

PC World, Fri, 16 Jul 2010 14:52 PM PDT
Atari to Cannibalize Back Catalog for Remakes of Classic Games http://
www.pcworld.com/article/201305/atari_to_cannibalize_back_catalog_for_remakes.html?
tk=rss_news
The company is remaking the Atari 2600 classic Haunted House
--
-Bill can updates of Centipede and Star Raiders be far behind? Star Raiders -
Atari - Atari 2600 - Video game - Centipede

1up.com, Fri, 16 Jul 2010 10:04 AM PDT
Atari Remakes for Centipede, Star Raiders May Be Coming http://www.1up.com/do/
newsStory?cId=3180426
After announcing that it would resurrect the Haunted House franchise, it now looks as if Atari may have some other retro revivals up its sleeve. Listings for Star Raiders and Centipede have both popped up on GameFly (via Joystiq , Siliconera), suggesting that the two games may each be in line for some sort of remake or revival. Both games were released around the same time as Haunted House ...

Joystiq, Fri, 16 Jul 2010 02:13 AM PDT
Gamefly listings suggest Centipede and Star Raiders remakes http://
www.joystiq.com/2010/07/16/gamefly-listings-suggest-centipede-and-star-raiders-
remakes/
[Star Raiders Tribute Page] It would appear that Haunted House marked the beginning of a new series of revamped Atari classics. Siliconera spotted GameFly listings for PS3 and Xbox 360 games called " Star Raiders " and " Centipede ." Centipede , of course, is one of the most well-known early arcade games, featuring a trackball-controlled avatar firing lasers at on-screen centipedes and ...

And hey cool, that last one points to my SR Tribute page
that I made ... wow... 14 years ago?! 8^o

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, and 800XE personal/home computers, and the Atari XE video game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from 1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

Today, the Atari computer intellectual property rights, along with the home market rights to the Atari trademark itself, are owned by Atari Interactive, Inc., a subsidiary of Atari, SA of Lyon, France.

NEWSGROUP BACKGROUND
comp.sys.atari.8bit was created in November 1986 (as part of the Great Renaming) as a direct replacement for: net.micro.atari8

comp.sys.atari.8bit is unmoderated, and has no formal newsgroup charter.

The comp.* hierarchy of Usenet newsgroups is managed by the Big-8 Management Board: http://www.big-8.org/

RELATED USENET NEWSGROUPS
  alt.binaries.comp.atari8bit
    Programs for Atari's 6502-based orphans.

  comp.sys.atari.advocacy
    Attacking and defending Atari computers.

  comp.sys.atari.announce
    Atari related hard/software announcements. (Moderated)
    Moderator: Kevin Savetz
    comp.sys.atari.announce web page: http://www.atariarchives.org/csaa/

  comp.sys.atari.programmer
    Programming on the Atari computer.

Perfect for the Atari 800 enthusiast's collection. This is a 132 page
book detailing the Atari 800.
Published in 1982 as a reference guide for sales associates. The book
is in very good condition for
its age. Thanks for your interest.

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, and 800XE personal/home computers, and the Atari XE video game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from 1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

Today, the Atari computer intellectual property rights, along with the home market rights to the Atari trademark itself, are owned by Atari Interactive, Inc., a subsidiary of Atari, SA of Lyon, France.

   http://www.faqs.org/faqs/atari-8-bit/welcome/

NEWSGROUP BACKGROUND
comp.sys.atari.8bit was created in November 1986 (as part of the Great Renaming) as a direct replacement for: net.micro.atari8

comp.sys.atari.8bit is unmoderated, and has no formal newsgroup charter.

The comp.* hierarchy of Usenet newsgroups is managed by the Big-8 Management Board: http://www.big-8.org/

RELATED USENET NEWSGROUPS
  alt.binaries.comp.atari8bit
    Programs for Atari's 6502-based orphans.

  comp.sys.atari.advocacy
    Attacking and defending Atari computers.

  comp.sys.atari.announce
    Atari related hard/software announcements. (Moderated)
    Moderator: Kevin Savetz
    comp.sys.atari.announce web page: http://www.atariarchives.org/csaa/

  comp.sys.atari.programmer
    Programming on the Atari computer.

Xref: g2news1.google.com comp.sys.atari.8bit:2089

And hello, comp.sys.atari.8bit :)

I'm trying to find (without any success so far) an Atari disk image that
contains a very specific bootloader. Here's what I remember of it:

- Graphics 0 text

- Background was vertically-scrolling rainbow colour bars

- Had music similar to what's in this video:
http://www.youtube.com/watch?v=zjD9i6Q0v0U

- Had the same flying swan as in this video:
http://www.youtube.com/watch?v=cGHwMVrlA78

Unfortunately, I can't remember which titles were on the disk that it
was the loader for, so narrowing it down that way isn't really a
possibility. If it helps, I would have had the disk that it was on

c.1985-6 in Ireland, and probably got it via the Atari Users' Group of
Ireland.

Any help appreciated - I've been trying to track it down for literally
years, and the vast majority of my Atari stuff is long-gone so
recovering it is not an option.

Thanks!

- x=usr(1536).

P.S.: The email address above is uncheckable, so please reply to NNTP.

I don't have an answer, just a suggestion.
Try www.atariage.com 8-bit forum, it has a much more robust user/
reader.

Posting-Frequency: 10 days
Last-modified: April 26, 2010

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, and 800XE personal/home computers, and the Atari XE video game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from 1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

Today, the Atari computer intellectual property rights, along with the home market rights to the Atari trademark itself, are owned by Atari Interactive, Inc., a subsidiary of Atari, SA of Lyon, France.

Hello:

I would like to use one of my 'modern' Windows PCs as a file resource
for one of my Atari800s.

What is the currently recommended hardware method for doing this? I
recall reading about SIO2PC quite a while ago. Is this recommended to
work with a USB/RS232 adapter? Are more modern methods available?

Thanks in advance for your assistance,
TomC

My preferred modern method is SIO2SD. You can fit an awful lot of Atari
stuff on a relatively small SD card, and then you don't have to tether
it to your PC. :)

Hi, I'll assume you don't have serial ports on your current computer.

IIRC To use an original sio2pc cable some people tried it with the
$2.99 usb to serial converters off eBay and had some trouble. The good
news is converters people say they have success with converters that
were still under $20.

There is a SIO2USB cable that Steve Tucker sells. I'm not sure how
much time and effort he is able to put into Atari anymore. I'm not
sure if he has updated his software to work with Windows 7 yet. Check
his web page.

There's a new sio2pc type program out AspeQt
http://sourceforge.net/projects/aspeqt/
It is quite good with some nice features. You may want to try it out
over APE or sio2pc software.

Other alternatives you can try is buying a PCI serial card for your PC
or just get an old laptop. If you go the latter route it can be a bit
of a hassle to get stuff to the laptop. Make sure it has a network
card and/or some type of mass storage. You probably need at least
Win98 to handle things like USB thumb drives for transfers.

Rick

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, and 800XE personal/home computers, and the Atari XE video game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from 1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

Today, the Atari computer intellectual property rights, along with the home market rights to the Atari trademark itself, are owned by Atari Interactive, Inc., a subsidiary of Atari, SA of Lyon, France.

NEWSGROUP BACKGROUND

comp.sys.atari.8bit was created in November 1986 (as part of the Great Renaming) as a direct replacement for: net.micro.atari8

comp.sys.atari.8bit is unmoderated, and has no formal newsgroup charter.

The comp.* hierarchy of Usenet newsgroups is managed by the Big-8 Management Board: http://www.big-8.org/

RELATED USENET NEWSGROUPS

  alt.binaries.comp.atari8bit
    Programs for Atari's 6502-based orphans.

  comp.sys.atari.advocacy
    Attacking and defending Atari computers.

  comp.sys.atari.announce
    Atari related hard/software announcements. (Moderated)
    Moderator: Kevin Savetz
    comp.sys.atari.announce web page: http://www.atariarchives.org/csaa/

If you have somewhat developed soldering skills, the SDrive
<http://raster.infos.cz/atari/hw/sdrive/sdriveen.htm> is an alternative
even easier to build , since it lacks the LCD. The most complicated
soldering part is the SD card slot (I have only found them as SMT, not
as hole-through), but this one can be replaced with an edge connector
with .10" spacing as shown here: <http://uanr.com/sdfloppy/>. If you
build a case around the drive, noone will notice the difference.

Thorsten

I wish someone would offer the bare PCB.

Thinking more about this... I wonder if it wouldn't be easier to base an Atari
SD adapter on the 4D uDrive:

http://www.4dsystems.com.au/prod.php?id=22

I have a cart for my Tandy CoCo that uses one of these for a solid-state disk.
  Parts count is extremely low.

Thanks for the link. Price is about right at $30 but I think for
what's left of the users it may not get much play. By that I mean most
of the people with deep pockets have already gone with more expensive
options so there would be resistance to moving to another hack.

We have kind of designed ourselves into a corner. It started with
Atari using bits of the 6520 for memory banking which was pretty short
sighted but became the standard anyway. Specifically they should have
added a couple of logic chips like the 74LS374 for $.40 and allowed
for 256 16k banks. They had the design for their banked switched carts
but didn't use it in the 130XE. I think some of Steve Tucker's carts
and devices use that scheme.

Current use of the 6520 for bank switching is lame on several levels.
Most important is the 6520 is an I/O chip and it is just being used as
an output latch for bank selection. What would probably make more
sense is a bit banging interface directly to an SD card using the
6520. I think the last SD card I bought was 512meg for a couple of
bucks and I routinely see them on sale. IIRC you would need to do
voltage regulation to 3.3V but cost for all parts including the SD
card would probably be less then $10.

Rick

On 28 May of this year here in this newsgroup a message was posted to look at the new website for "Kjmann's Atari Sales & Services". At that time I was impressed with an 800XL system offer he made: an 800XL with power supply and modded to support SVGA graphics along with two game cartridges and all cables for $75. On 2 June I paid to Salvador Esquivel (Kjmann) a Paypal payment of $129.00 for the XL Game System and an Action cartridge.

That was four months ago. In the intervening 16 weeks I have contacted Mr. Esquivel five times. On three occasions he told me that the package would be in the mail within a few days. The fourth time he told me that the package was actually in the mail (this four weeks ago). He didn't bother to respond to the fifth message at all.

At no time has he ever bothered to mention anything at all about giving me my money back.

I am a disabled veteran currently in a wheelchair and on daily dialysis. I mention this only to say that this system was to be used during my grandchildren's past summer vacation when they came over to spend the night each week. It was to have been something unique that I could have done with them by showing them some of the classic old games I used to play.

Well, okay, that ship has sailed - I only want my money returned now. At any rate, I post this message as a caveat to anyone contemplating dealing with Mr. Esquivel. I hope your luck is better than mine...

D.B.

http://morethangames.a8maestro.com/proda8/adv-eh0130.htm

sells complete SDrive, down to just pcb and sd card socket...
i just recently got one and it is nice...

sloopy.

No, and that's my own fault. I guess I am just too trusting in my
fellow Atarian. He strung me along and I played into it. I am still
not convinced he is an outright thief although it is beginining to
look that way. I was just wondering if anyone here had done any
successful business with this guy?

I purchased an Action! cart from him several months ago. It was shipped
promptly. I'm disappointed to hear about your problem.

I never attended a Toad Fest either, but always wanted to go. I did
attend fests in Chicago, Indianpolis and Vegas. They were great fun
and it was always nice to meet fellow Atarians.

I have also transfered files from the 8-bit to the ST and
vice vera. I used a program on the ST the emulates an 8-bit
drive.

When we got our first PC, I actually used our phone line to move files
from our Atari 8-bit to the PC. You could change a digit in your phone #
which would allow you to call yourself, and I was actually able to get
the two modems to talk to each other, even though there was a loud buzz
in the background (probably to discourage people from using it as an
in-house intercom system). I guess a null modem might have been easier,
but the PC and the Atari were on different floors. :)

Speaking of having to RESET to get out, anyone remember a program called
Paperweight? It would simulate a self-destruct sequence that was pretty
realistic looking. The first time I ran it, it scared me so much I put
the computer into self-test mode just to make sure it hadn't really done

anything!

Do you mean this program?
http://ftp.pigwa.net/stuff/collections/holmes%20cd/Holmes%201/ATR%20Programs/
Applications%20A-Z/Paperweight%203.1.atr

BTW: This time you should use the following special selftest to check
if your Atari is still ok :-)

http://www.mathyvannisselroy.nl/selfdemo.com

so long,

Hias

:D Yeah. By the time I ran it, I was using a C= monitor,
so the snowy static effect didnt trick me, but I did
find it hilarious.

Need to go dig that one up. :)

Not to be taken seriously this was a Error.
I just noticed that this some how got posted.
I believe it came from a text adventure game.
Not to be taken seriously.

I get errors on that url. Firefox thinks it is a busted Quicktime
and
IE 7 just gives a WMP error. Is that all there is?

Thanks Michael, I did finally download it, by clicking the URL,
but then erasing the selfdemo.com from the end and going to
Mathy's site and figuring how to save target as, which Firefox
wouldn't
do, needed IE7.

Has computer, some carts, 5.25 disc drive and tape machine, may also have
centronics printer interface, needs some foraging to find bits, but been
stored indoors.

 London UK area. Must come and fetch.

Posting-Frequency: 10 days
Last-modified: April 26, 2010

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, and 800XE personal/home computers, and the Atari XE video game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from 1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

Today, the Atari computer intellectual property rights, along with the home market rights to the Atari trademark itself, are owned by Atari Interactive, Inc., a subsidiary of Atari, SA of Lyon, France.

NEWSGROUP BACKGROUND
comp.sys.atari.8bit was created in November 1986 (as part of the Great
Renaming) as a direct replacement for: net.micro.atari8

comp.sys.atari.8bit is unmoderated, and has no formal newsgroup charter.

The comp.* hierarchy of Usenet newsgroups is managed by the Big-8 Management
Board: http://www.big-8.org/

RELATED USENET NEWSGROUPS
  alt.binaries.comp.atari8bit
    Programs for Atari's 6502-based orphans.

  comp.sys.atari.advocacy
    Attacking and defending Atari computers.

  comp.sys.atari.announce
    Atari related hard/software announcements. (Moderated)
    Moderator: Kevin Savetz
    comp.sys.atari.announce web page: http://www.atariarchives.org/csaa/

  comp.sys.atari.programmer
    Programming on the Atari computer.

OK, corrected a few typos like -1 in the data statement and what damage auto format did to EOLs a couple of days ago but it took me forever to find time to work on my el33te skills.<sic>

I didn't do the data statement thing, just read the file in from the emulator H: device and 'pokered' it into page 6, Expands it to 33 bytes. Once again TASM because I keep forgetting what PD assembler I was planning on switching to. Maybe had oughtta switch it to $680 but I just wanted to see it run right. BTW: I do have my original Atari ASM/ED cart as a binary file and my MAC/65 cart.

```
 *=3D$600
 pla
main
 lda $D200  ;POT0
 adc $14    ;RTCLOK+2
 sta $D017  ;COLPF1
 lda $D40B  ;VCOUNT
 sbc $14    ;RTCLOK+2
 sta $D01A  ;COLBK
 sta $D40A  ;COLBK
 lda 764   ;INKEY
 cmp #$FF   ;no key pressed
 bne main
 lda #$FF   ;relieve keyboard touch
 sta 764
 rts
 .end
```

I'm not sure why all the monkeying around with RTCLOK was done. Maybe to kill attract mode. I left the first 21 exactly as in the original with the RTCLOK and POT0 thing the original author did and just changed it to hit any key to exit at the end.

Rick

It shows up as audio/mpeg. You need to edit your .htaccess file.

>>
>> >> Hias
>>

Why are you trying to play it in a web browser. Just download it.

>> Here's a different source for Self Demo, might be easier to download:http://
atari.fandal.cz/detail.php?files_id=883

That breaks three rules; it's in a ZIP file instead of a ARC file, the
filename is too long for both the archive and program, and there's
a embedded space in the filename.
And what's a XEX file?
(besides the executable type used by Final Fantasy XI on the 360 game
system)

So FireFox doesn't have a "Save as" option under the file menu? That's
what I used in Opera.
(which simply showed me a blank web page instead of trying to play it)
Or you can just type
"wget http://www.mathyvannisselroy.nl/selfdemo.com".
(which reveals the wrong content-type of "audio/mpeg")
Or else try
"lynx -dump http://www.mathyvannisselroy.nl/selfdemo.com > selfdemo.com".
Unlike FTP, there's no ASCII/text transfer mode in HTTP so there's no
chance of corrupting the file no matter how you download it.

Personally I think it's nuts to use a browser (FF or IE) that downloads
and runs machine code from WWW sites.

> 0660 RTS

This won't do anything unless the user manually runs it via the DOS
"RUN AT ADDRESS" command. You need to add a run address and I forget how to
do that in ASM/ED.
(by the way, anyone know where to download the cartridge image?)
And won't the extra spaces in lines 600,604,609-611 screw up Atari
Assembler/Editor?

Here's your prog converted to assemble under A65:

```
     ORG $600
     LDA $D200
     ADC $14
     STA $D018
     LDA $D40B
     SBC $14
     STA $D01A
     LDA $2FC
     CMP #$FF
     BEQ $600
     LDA #$FF
     STA $2FC
     RTS
     END $600
```

Note that ORG is used instead of "*=" to specify the address to store
the programme at and END is used to specify the run address. And the
indentation is needed so that A65 can tell they're not labels.
(I used the TAB key at the beginning of each line but for some reason
there're only 5 spaces now)

Here's the finished product:

```
begin 666 NOWSYNC.OBJ
I__\ !AP&K0#2912-&-"M"]3E%(T:T*W\ LG_\.FI_XW\ F#@ N$"  8 y

end
Byte count = 147
Checksum = #x21BA
(using YAUE)
```

I don't know how it works. The POT0 and the RTCLOK are loading to
poke into COLPF1 and
COLBK, subracting for one, adding for the other, which makes one go up
and the other down and
the clock gives an increasing number for each color to change on a
scan line...?

r
I see a URL, I just click on it and expect to be able to download.
I realize it was an executable URL and not a URL for downloading from.
I don't know how to just download from that URL. I figured that out,
sorta, then clicked on it,
went to the site, then changed the address to just Mathy's site, then
I could navigate to where I could download it.
Hmmmm.... I'm not making much sense, I really don't remember what I
did, but the end is I was able
to go to Mathy's site, download the selftest.com file, use imageman to
put the .com in a SMARTDOS.ATR
and run it from Atari 800 winplus 4 emulator. I realize I don't have
to put it in an ATR, could just run it
in the emulator.

<<This won't do anything unless the user manually runs it via the DOS
"RUN AT ADDRESS" command. You need to add a run address and
I forget how to do that in ASM/ED.
And won't the extra spaces in lines 600,604,609-611 screw up Atari
Assembler/Editor?>>

Spaces are not critical in AsmEd except at the start of the line, and then
subsequent fields must be separated by at least one space.

Simplest is:
```
0670  *=$2E0
0680  .BYTE 0,6
```

Elegant is:
```
0580 RUNAD =$2E0
...
0600 START LDA $D200
...
0670  *=RUNAD
0680  .WORD START
```

Lots of possible combinations with .BYTE, .WORD and labels.

I wasn't AMS. It was in a compy shop demo disk, and I dug it out and
made an .exe/com out of that
particular 'house of rising sun' eight sided graphics demo.
There were about five demos on the disk, another one was a six sided
fast moving dots with music.
Another had a band playing and figures playing music.

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, and 800XE personal/home computers, and the Atari XE video game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from 1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

Today, the Atari computer intellectual property rights, along with the home market rights to the Atari trademark itself, are owned by Atari Interactive, Inc., a subsidiary of Atari, SA of Lyon, France.

I was So tired of ebay taking so much money out of the sales of the
games in my store. I finally decided, enough was enough.

The 15% that ebay charges not to mention the monthly fee for having a
store, was getting ridiculous.

In order to break even, I had to charge, $39.95 per game cart, plus a
$5.00 handling fee and not to mention the shipping charges.

By the time someone bought a single game, they were in to it for
roughly $50.00 or more. that's just too much!

I opened this store to offer these games at reasonable prices, not
obscene prices.

So after several days worth of HTML nightmares, Our website is up with
Google Checkout! We Ship to all countries.

The prices went down to $34.95 and No Handling Charges! Just Plain old
shipping. Priority or Parcel Post. =)

This means a person could buy a game and be in to it for just under
$40.00

Check it Out. =)

atari-sales (DOT) com

A Store for Atarians, Run by an Atarian.

=)

Good move. I was holding off on purchase of Action! from eBay for exactly the
reasons you cite. Just ordered from your new store :-).

So, uh, stupid question... where's the site, exactly?

You didn't post an URL, and Googling for "kjmann atari sales" comes up

with a lot of links to your Ebay store.

Thanks!

Ran into a bit of a problem, work around seems a little to
complicated.

Wanted to do

int array foo=[2 1 0 -1 -2]

but compiler balks at the negative values.

I can get it done with

card array foo=[2 1 0 65535 65534]

and then just treat it like an int array i.e.

Printie(foo(3))

gives -2

Is there a shorter/more direct method of doing this? It's not the kind
of thing I do often but I am having to do assignments, print to disk,
inport and format.

I don't know about a better way, but I'm sure that if
ACTION! is a floating point language, then INT will be
looking for 0 to 65535, not -32768 to 32767, or it will
be -32767 to 32768. I can never remember that.   8^)

Welp, played with it a couple of hours and I think I know what is
going on. Action! does handle ints as 2 byte signed values -32,768
to +32,767 but the way the compiler handles code blocks [data between
brackets] is intentionally left weak for flexibility so it only
handles bytes and cards: It just doesn't know what to do with the
minus sign.

Sucks on one level in that the only way you can declare a variable and
assign it a value is with the brackets i.e.
BYTE foo=[0], bar=[123]
CARD bfoo=[65000]
but AFAIK nothing you can do other then the jerking around with CARD
arrays and maybe a programmer's calculator will let you initialize an
INT to a negative value.
INT num=[-1] ; doesn't work

```
INT num
num=-1  ;works

I don't use negative numbers or floating point that much. I think I
bought my Action! cart back around 1984 and this is the first time
I've tried to do the int array thing with it.

I never had an Action! cart. I was thinking of getting one
this past year, but at the time I couldn't find it priced

reasonably. This new store seems to have it at a good price,
but I've bought so many things in such a relatively short
period of time and really don't have that much time to play
with it all, I have to think, 'is it really worth it to me?'.

Bill

Honestly at this stage it seems less important. At the time I had a
lot of one off kind applications I had to do like an 80 column
terminal so I could connect to our work computer. It takes me a long
time to write anything in assembly and BASIC is just too slow. Action!
was a good fit for me but it was a long learning curve. Floating point
access is about as hard as doing it from assembly so it's a pretty
narrow range that Action! is best for.

Rick

Well Some....Well I can't Say Bad News, But it's just....News. =)
I had to switch to paypal's Shopping cart system because google has
problems with overseas shipping. (THIS DID NOT AFFECT PRICING ON MY
SITE).

Even though google says it will ship to Places like germany, I had to
send two customers from Europe a paypal invoice because google check
out said they didn't support shipping to their country.
Google checkout also has NO CUSTOMER SERVICE AT ALL.
OMG, it was the worst experience I've ever had with a company. no
phone number to call or Email address to send to. not even a feedback
form. just a "choose your problem and click on it" page with cookie
cutter automated answers.
No help at all.

So I Spent 4 hours last night typing in all the proper shipping
figures into paypal and set up the buttons on my page.

Hope this doesn't inconvenience anyone. =)

The good news is... Still no more Ebay!!!! Hurray!!! LOL

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, and 800XE personal/home computers, and the Atari XE video game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from 1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

Today, the Atari computer intellectual property rights, along with the home market rights to the Atari trademark itself, are owned by Atari Interactive, Inc., a subsidiary of Atari, SA of Lyon, France.

NEWSGROUP BACKGROUND
comp.sys.atari.8bit was created in November 1986 (as part of the Great Renaming) as a direct replacement for: net.micro.atari8

comp.sys.atari.8bit is unmoderated, and has no formal newsgroup charter.

The comp.* hierarchy of Usenet newsgroups is managed by the Big-8 Management Board: http://www.big-8.org/

RELATED USENET NEWSGROUPS
  alt.binaries.comp.atari8bit
    Programs for Atari's 6502-based orphans.

  comp.sys.atari.advocacy
    Attacking and defending Atari computers.

  comp.sys.atari.announce
    Atari related hard/software announcements. (Moderated)
    Moderator: Kevin Savetz
    comp.sys.atari.announce web page: http://www.atariarchives.org/csaa/

  comp.sys.atari.programmer
    Programming on the Atari computer.

Down to $30 now huh. Thing seems to be crap on a cracker but I wish I
had more spare time. I assume everyone is in the same boat as me,
matter of fact I actually have a beater sailboat that takes up most of
my free time.

If I have it correctly it is a Nintendo on a chip for the electronics.
I'm interested in just exactly how things like the mouse are
interfaced. I assume the mouse and keypads are all serial which was no
doubt to avoid the Atari J/S patents.

I'm pretty sure the NOAC, not sure how they brought out the cartridge
port or anything else for that matter. I think the NOAC has specs

pretty close to the original Nintendo so that would mean something
like 2k RAM and 2k video RAM, maybe they stuck some in the cart.

<snip>

Pretty crappy reviews, yes. :)

Here's what I want -- not particularly Atari 8-bit-related, but
perhaps someone out here has some ideas. I want to create a remote
control (as in, like you'd use for a TV or VCR) that controls my
Atari Jaguar. (Seems to be just the standard old Atari 2600 controller
port with additional buttons -- at least one widget exists to let one
use a Jag controller with platforms with the 2600-style input.)

I'd use it for controlling music in my Jag's CD / VLM toilet seat,
without having to dig out a real Jag pad. I'd only need the basic
buttons: D-pad, A, B, C, Option, Pause -- that is, no numeric keypad.

sigh

Check out all the new Game cart releases at Kjmann's Atari Sales and
Service!!!

Including a new version of "Donkey Kong" With more authentic sound effects
and music. We also added the Intro Animation with kong bending the girders.

Also a long awaited Release of one of the greatest arcade games ever! we
found this on a prototype disk, in a file cabinet that was purchased
directly from atari when they were selling everything off in 1996. The disk
was slightly damaged, but we managed to repair the code and get the game
ready for release.

When you look at our new releases page, Remember this Saying.....

"BEWARE!   I LIVE!"

=)

Did you get the idea from Xbox?
http://www.amazon.com/DVD-Remote-Control-Xbox-Buttons-Sensor/dp/B000YQSKZC

That thing seems to come with a detector to plug into an Xbox joystick
port. Unfortunately if I have it right Xbox is usb so you would have
to use a linux box with USB to read the signals then send them out the
printer port to the Jag.<grin>

I think Radio Shack used to sell an IR detector/decoder but I don't
see it in their catalog anymore. It was kind of pricey anyway IIRC.

Short story, a friend and her eBay partner bought a pallet of busted
up laptops. Lots of weak ~75mHz pentium W/95 with bad battery packs
and screens that don't light up. They are<her and her former partner>
99% through sorting out and picking off stuff that sort'a works. Punch
line is you can get a working computer in that class for $31 shipped
so it is pointless to buy a $60 battery pack or new voltage converter
to get the screens operable again. Her educated opinion is she can
just E-waste recycle what's left for more then she could sell them on
eBay.

That being said, if anyone needs a [2.5", 5V only, .5-1.2g IDE] hard
drive let me know and I will pass it on. I think ~$10 would be fair.
If you want put it in anything other then a notebook you will need one
of those 40 pin to 44 pin IDE convertors.

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, and 800XE personal/home computers, and the Atari XE video game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from 1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

Today, the Atari computer intellectual property rights, along with the home market rights to the Atari trademark itself, are owned by Atari Interactive, Inc., a subsidiary of Atari, SA of Lyon, France.

NEWSGROUP BACKGROUND

comp.sys.atari.8bit was created in November 1986 (as part of the Great Renaming) as a direct replacement for: net.micro.atari8

comp.sys.atari.8bit is unmoderated, and has no formal newsgroup charter.

The comp.* hierarchy of Usenet newsgroups is managed by the Big-8 Management Board: http://www.big-8.org/

RELATED USENET NEWSGROUPS

  alt.binaries.comp.atari8bit
    Programs for Atari's 6502-based orphans.

  comp.sys.atari.advocacy
    Attacking and defending Atari computers.

  comp.sys.atari.announce
    Atari related hard/software announcements. (Moderated)
    Moderator: Kevin Savetz
    comp.sys.atari.announce web page: http://www.atariarchives.org/csaa/

  comp.sys.atari.programmer
    Programming on the Atari computer.

That's right, geeks... everyone's favourite open-ended, semi-
competitive retrocomputing free-for-all is just around the corner. Do
you have what it takes to go head-to-head with the hardest-core
RetroGeeks in the whole wide world? Me neither, but I do have a bit of
time to kill in July...

Those with internet access can learn more about RetroChallenge 2010 at

Hi Everyone,

After getting tired of all the bad attitudes on AtariAge recently, I started
working on putting up a new atari discussion board.

I just finished it today.

http://www.atarian.info

hopefully This one will not attract the freaks. LOL

Check it out!

=)

I started a forem so I could make some posts and get everything backed
up to The Wayback archive automatically. In about 2 months I have
banned ~1,200 accounts. The nut jobs are the first to show and in the
greatest numbers. I've spent more time banning people then anything
else. Blanket ban of anyone with a gmail account helped cut down on
time spent banning people but the irony is I have to give it an email
address other then my gmail account or I would be banned too.

So basically what you are saying is, you didn't like the reaction to
your Atari products and decided to start your own forum? Interesting!

Going from an established, well used, well liked forum and starting
your own just because of a few negative comments (whether true or not)
seems a bit of a knee jerk reaction. Now you have to grow your own
site to sell your products, reducing your market by a significant
margin. More forums just dilutes the knowledge and spreads it further
around, a BIG negative for the Atari community.

Maybe just grow a thicker skin?

Comments on any of the products I sell are a VERY small percentage of the poor behavior on AtariAge.

There is a lot of negativity on AA. What is Sad is that AA was originally started by some people who wanted to get away from the nasty people on some of the discussion forums of the time. But now it seems that AA is turning into what it was originally created to get away from.

I'm not the only one who feels this way and I didn't start this new forum to sell the products in my store. I didn't need a forum for that. less than 10% of my sales are from AtariAge People. Not that I don't welcome the Patronage from those that come from there, but it does remain a fact most of my sales are from people who don't even frequent the forums.

Besides, I don't think its unreasonable to want to chat about these things in a Civil environment, free of insults and rantings by people who have opinions that are not shared by others. a lot of those type of people tend to hammer on others when they don't agree with them.

FWIW: Occasionally I look at other forums including Atari Age. No
great loss but life has me relatively too busy to take part in more
then my occasional post here. AA seems like a good and well run forem
but sheesh the hankie fights get out of control! I thought the Nolan
Bushnell thread was filled with particularily vicious and uncalled for
comments.

BUT the same kind of stuff sometimes happens here and just about any
other forum. I think you could just about have questions on a user
profile that would sort them out. Seems to identify:

Mostly unmarried/unloved.
Dropped out of school after a couple of years of college.<Their
teachers had it in for them!>
Thinks they are smarter then everyone but 2-3 Watson and Crick types.
Believes they have perfect recall on all topics.
When facts and their personal beliefs don't jive, they stick with
personal beliefs.
Strange connection to CB or Shortwave radio. Not that there aren't
great people involved in those hobbies, just that they attract some
real wierdos.
Their opinions are not just opinion but what should be a shared
reality.
They aren't bound by the rules of society like polite conversation or
meaningful contribution to discussions.

Rick

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, and 800XE personal/home computers, and the Atari XE video game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from 1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

Today, the Atari computer intellectual property rights, along with the home market rights to the Atari trademark itself, are owned by Atari Interactive, Inc., a subsidiary of Atari, SA of Lyon, France.

I haven't seen things like that in users profiles before but I haven't
considered looking at some of the profiles on AA before. Perhaps I
should. LOL

Sounds like there are some people that are in severe need of
counciling hopping around the net these days. =3D)

As for the Nolan Bushnell Thread, Your Right. It got ridiculous after
a while, as have some other in the past. =3D)

I'm please to learn about the ANALOG magazine archives now available.
There is a torrent of all 79 issues, 7.79 gigs of PDF files, plus
the .atrs of disk from
about issue 9 on.
The PDF torrent is probably more convenient to read than simple .jpg
300 dpi scans
found here:
http://www.pontarohbay.mydns.jp/~frank/analog_computing/index.html

Above effort by a japanese fellow named kowatari.

Both the torrent and part of the .jpg .zips of issues site are largely
by kowatari and
a Atariage user by name of thumpnugget.

I have been interested in years of how to make ANALOG available,
hoping they wouldn't
get lost, and here is the answer. My own efforts to get the last
couple of issues
in my collection, I had a fuzzy notion of how could ANALOG be
archived, but now
I see these solutions.
There are a few holes in the record. One is I don't think there
are .atrs of disks
containing the magazine programs for issues 1 to 8. A second thing
needed
is a good index of articles. Early years of ANALOG published an Index
yearly,
and they were very good. I think the later years, particulary the

Larry Flint years,
I don't think indeces were published.
Ahhh... I have something here, maybe someone knows of a better, but here is
my index, not mine, it was made by Tom Hunt, I started one, but Tom's is much
better, issues 1 to 66 tho......Uhm. formatting doesn't come out so good with
the cut and paste. If anyone wants the ASCII file that has good formating
my e-mail isn't obfuscated.

So this lead me to the "ok to do this" email sent to kowatari
by Lee Pappas.  I wondered who that was and what he's up to.

Well, apparently this!?

  http://www.analogretro.com/StarRangers/

Pappas OKed the Kowatari archives. I think Thumpnugget's
contributions also derive from the Pappas 'OK'.
Cyberroach got Michael Descenes' (sp?) permision for his archive,
which just isn't going very fast,
and requires OCRing the mags, which puts the mags back in the word
processing scheme. I don't
think ASCII files are necessary, the PDF and JPEGs are easier to read
and more faithful to the original.

I've been trying for years to complete my ANALOG collection, I'm down
to just one issue that I only
have a Zerox of.

Actually, not to start trouble, but I'm pretty sure neither Deschenes
nor Pappas own the rights to
ANALOG, that would be LFP.

I take that back (LFP owns rights to ANALOG). I don't know, actually,
but guess that maybe Antic
got the rights to ANALOG when they agreed to take over ANALOG
subscriptions at the end of ANALOG.
Then Antic didn't last much longer than ANALOG. Antic was put in STart
for several months. STart and
Antic went out, last issue 5/91. So ANALOG ended 12/89, issue 79,
then Antic lasted for ...
Here's my record on Antic.

********** Start a cut and paste

Complete list of Antic Magazines

Antic began publication 4/82, Volume 1, Issue 1.
They were bi-monthly for the first Volume, six issues.
Starting 4/83 (Vol. 2:1), Antic became monthly.
They published monthly until 9/89, missing only one month
(5/84), making the volume year end with April issue instead
of March issue. That's 65 consecutive monthly issues from
2:1 to 8:5.

Starting 10-11/89, Antic became bi-monthly again (issue
8:6), and were bi-monthly for only 5 issues. Volume 8 only
had 8 issues. 10-11/89 (8:6), 12-1/89-90 (8:7), 2-3/90

(8:8), 4-5/90 (9:1) and 6-7/90 (9:2), <-- the last issue of
a separate Antic. There was no 8-9/90 Antic. Then Antic was
put as a section of STart magazine for 4 issues (10, 11, 12,
1/90-91). Then STart, still with an Antic 8-bit section,
went bi-monthly for the last 2 issues (2-3/91 and 4-5/91)
then STart folded and that was the end of Antic and STart.

List of Issues/Volumes:
Vol. 1 - Six issues (4-5/82, 1:1) to 2-3/83, 1:6)
Vol. 2 - 12 issues, all monthly
          4/83, 2:1 to 3/84, 2:12
Vol. 3 - 12 issues, but no 5/84, so Volume year now ends
          April instead of March.
          4/84, 3:1, (no 5/84), 6/84, 3:2 to 4/85, 3:12.
Vol. 4 - 12 issues, 5/85, 4:1 to 4/86, 4:12.
Vol. 5 - 12 issues, 5/86, 5:1 to 4/87, 5:12.
Vol. 6 - 12 issues, 5/87, 6:1 to 4/88, 6:12.
Vol. 7 - 12 issues, 5/88, 7:1 to 4/89, 7:12.
Vol. 8 - 8 issues.
         5/89 (8:1), 6/89 (8:2), 7/89 (8:3), 8/89 (8:4),
         9/89 (8:5), then bi-monthly 10-11/89 (8:6),
         12-1/89-90 (8:7), 2-3/90 (8:8).
Vol. 9 - 2 issues.
         4-5/90 (9:1), 6-7/90 (9:2) <-- Last issue of
         separate Antic. No 8-9/90 Antic.
Then Antic was put as section of STart magazine for 4
monthly issues (10, 11, 12, 1/90-91). Then STart went
bi-monthly (2-3/91 and 4-5/91) <-- Last issue of STart with
Antic section.
That's 94 issues total, including issues in STart, 88
separate issues of Antic.

Russ Gilbert

Hi, Everybody -

My love affair with the Atari 8-bit computer began in 1982. It was my introduction to home computers and programming, and I have loved every minute of it. Now the time has come for me to part with my 8-bit gear. :`(I have a small collection of equipment and software I'm looking to pass on to a good home. [b]One caveat[/b] -- Before packing it up, I successfully booted and have run the self-test routine on one 130XE machine; but since the disk drive is not operating, [u]I have not operated the system otherwise in the past few years[/u]. That said, listed below are the items I am inviting offers for.

Long live Atari!

 - AlanK

[u]HARDWARE - Presumably good operating condition[/u]
[list]

[*]Atari 130XE computer, complete w/power supply (C061982), TV adapter, manual (in orig. box)
[*]Atari 850 Interface, w/ power supply (CA014748), manual, serial cable
[*]Atari 410 Program Recorder w/ manual (in orig. box)
[*]Supra Modem 2400 w/ power supply and manual
[*]Microbits Peripheral Products MPP-1000C 300 baud modem, w/ power supply, manual, software (ROM cart.) (in orig. box)
[*]KoalaPad Touch Tablet, w/ KoalaPainter software (ROM cart.) and manuals (in orig. box)
[*]Mannesmann Tally Spirit MT-80 dot matrix printer, w/ manual, extra ribbons (in orig. box)
[*]Alps Allegro 24 dot matrix printer, w/ manual, extra ribbons.
[*]Pengo 25 ft. parallel printer cable
[*]Okimate 10 color printer w/ set-up guide, Atari Plug=91nPrint module installed, and extra ribbons (in orig. box)
[*]Okimate 10 Plug=91nPrint complete module kit for Atari =96 module, black ribbon, color ribbon, cable, software, printer manual (in orig. box)
[*]Microbits Peripheral Products MPP-1150 Parallel Printer interface with manual

[*]BLE Disk Emulator Routine (allows a spare 8-bit Atari computer to serve as a RAMdisk), complete with ROM cartridge, interface cable, software
[*]SIO-2-PC (allows 8-bit Atari to connect to a PC serial port and use hard drive storage) =96 includes interface cable, software, and documentation on disk.
[*]Kraft 8-way joystick

[/list]

[u]HARDWARE - Unknown condition
[/u]
[list]

[*]Atari 130XE computer, w/power supply (C061982) only
[*]Atari 1050 disk drive, no power supply
[*]Atari CX77 Touch Tablet, with AtariArtist ROM cartridge software
[*]Microbits Peripheral Products MPP-1000E 300 baud modem

[/list]

[u]HARDWARE - Not operating[/u]
[list]

[*]Indus GT double density disk drive with power supply, manual, disks, carrying case
[*]Atari 65XE computer (no power supply)
[*]Miscellaneous joystick parts
[/list]

[u]SOFTWARE =96 Diskette (5 =BC inch) or ROM Cartridge (where noted)[/u]

[u]Games, Creativity, Educational[/u]
[list]

[*]A+ Spanish (American Educational Computer) =96 new, unopened
[*]MasterType (Scarborough Systems) =96 ROM cartridge w/ manual (in orig. pkg.)
[*]Linkword Spanish (Artworx) =96 w/ cassette, manual (in orig. pkg.)
[*]Preschool IQ Builder #2 (Program Design Inc.) =96 w/ cassette version as well, manual (in orig. pkg.)
[*]M.U.L.E. (Electronic Arts) =96 w/ manual (in orig. pkg.)
[*]The Seven Cities of Gold (Electronic Arts) =96 w/ manual (in orig. pkg.)
[*]In Search of the Most Amazing Thing (Spinnaker) =96 w/ manual, storybook, quick reference card (in orig. pkg.)
[*]Scott Adams Graphic Adventures 1-6 (Starsoft) =96 w/ hint book (in orig. pkg.)
[*]Dragonriders of Pern (Epyx) =96 w/ manual (in orig. pkg.)
[*]Dragon Quest (Antic Publishing) =96 w/ printed docs (in orig. pkg.)
[*]Orbit - A Trip to the Moon (Antic Publishing) =96 w/ printed docs (in orig. pkg.)
[*]Colourspace (Antic Publishing) =96 w/ printed docs (in orig. pkg.)

[*]Star Raiders (Atari) =96 ROM cartridge w/ manual
[*]Pole Position (Atari) =96 ROM cartridge only
[*]The Hitchhiker=92s Guide to the Galaxy (Infocom) =96 diskette only
[/list]
[u]Applications[/u]
[list]

[*]Print Power (Hitech Expressions) =96 make greeting cards, etc. w/ manual (in orig. pkg.)
[*]RAMbrandt (Antic Publishing) =96 graphics application, also includes Solid Object Module, w/ printed docs (in orig. pkg.)
[*]Atariwriter (Atari) =96 ROM cartridge word processor w/ manual, reference card, printer driver diskette
[*]Super 3D Plotter II (Elfin Magic) =96 graphics application w/ manual, reference card
[*]Page Editor (Alan Kirk) =96 desktop publishing w/ documentation on diskette
[*]Print Lab (M.D. Software, UK =96 desktop publishing w/ manual)
[*]TextPro 2.5r (Portland Atari Club) word processor w/ docs on disk
[/list]

[u]Utilities, Programming, Miscellaneous[/u]
[list]

[*]GTIA Graphics, Tricky Tutorial #9 (Educational Software Inc.) =96 w/ manual (in orig. pkg.)
[*]S.A.M. Tutorial, Tricky Tutorial #12 (Educational Software Inc.) =96 w/ manual
[*]Advanced Programming Tools, Tricky Tutorial #14 (Educational Software Inc.) =96 w/ manual
[*]A New Disk Management System (Old Hackers Atari User Group) =96 w/ documentation
[*]Pirates Treasure Chest (Duplicating Technologies Inc.) =96 w/ documentation
[*]MPP Express/Mscope (Antic Magazine) PD0087
[*]Going Online (Antic Magazine) ADS0886
[*]The Best of Antic (Antic Magazine) ADS0010
[*]DOS Disk #1: 9 Public Domain DOS=92s (Portland Atari Club)
[*]Express! 850 Modem Program (Portland Atari Club)
[*]XL Translator (Portland Atari Club)
[*]MACE diskettes =96 Catalog 1, 2, 3; Captive & Number Games (Disk G-64)
[*]PACE Library =96 6/92
[*]Pantheon v 2.0 (aka PanView) =96 NWPAC Disk of the Month, Nov =9192
[*]Pot of Gold (Alamo Area Atari Users Assn., San Antonio, TX)
[/list]

[u]SOFTWARE =96 Cassette Tapes[/u]

[u]Games, Creativity, Educational[/u]
[list]

[*]Empire of the Overmind (Microcomputer Games) =96 w/ manual (in orig.

pkg.)
[*]Conversational Spanish (Atari, Longman/EMI) =96 w/ manual (in orig. pkg.)
[*]Turtle Tracks (Scholastic Wizware) =96 w/ manual (in orig. pkg.)
[*]747 Landing Simulator (Atari Program Exchange) =96 w/ manual (in orig. pkg.)
[*]Pirate Adventure, Scott Adams Adventure #2 (Adventure International) =96 w/ manual (in orig. pkg.)
[*]Pyramid of Doom, Scott Adams Adventure #8 (Adventure International) =96 w/ manual (in orig. pkg.)
[*]Golden Voyage, Scott Adams Adventure #12 (Adventure International) =96 w/ manual (in orig. pkg.)
[*]Blackjack Casino (Atari Program Exchange) =96 w/ manual
[*]Nautilus (Synapse) =96 w/ manual
[*]Legionnaire (Microcomputer Games) =96 w/ manual
[*]Square Pairs (Scholastic Wizware) =96 no manual, (in orig. pkg.)
[*]Journey to the Planets (JV Software) =96 no manual
[*]Kingdom (Atari) =96 no manual
[*]Dice Poker (Atari Program Exchange) =96 no manual
[*]Temple of Apshai (Epyx) =96 no manual

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, and 800XE personal/home computers, and the Atari XE video game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by

Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of
Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from
1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

Today, the Atari computer intellectual property rights, along with the
home market rights to the Atari trademark itself, are owned by
Atari Interactive, Inc., a subsidiary of Atari, SA of Lyon, France.

I'm not sure that I understand the point. You're going to host
a newsgroup or groups via HTTP instead of NNTP? Why not just host an
actual Atari BBS via emulator? That way you could put up some
ATASCII/ASCII games to play. Otherwise just run your own NNTP server.
(like the makers of elinks did)

And anyway, you have to sign up just to read the message boards? I'm not
going to go through the effort of doing that just to preview the boards
so that I know whether I want to sign up or delete my newly created
account. Plus even the login page utilises TABLEs. I can only imagine
the TABLE hell that I would endure once I "got in".
(but, then again, most HTML BBSes are TABLE hells)
OAnd it seems to like to use explicit tags like B when it should be
using implicit tags like EM (or STRONG).

I can't understand why anyone would want to use a HTML BBS. NNTP lets
your newsreader sort and arrange message lists to your heart's content.
You can see the list of articles sorted by subject or just see a list
sorted purely by date.
(useful for very low volume groups)
And, of course, it (the newsreader) keeps track of what messages have
been read or not.

And last but not least; why should we leave this newsgroup at all. It's
a public newsgroup that everyone should become aware of the moment they
type "*atari*" into their newsreader. So this is the natural forum to
make everyone's main focus so as not to splinter the Atari community. It
literally needs no advertising.

Which is great if you use NNTP. Let's face it, the overwhelming
majority of casual net users (and even dedicated net users) don't even
know what NNTP is. An HTML web site is still the way to go if you want
to involve a majority of interested people in an Atari discussion. By
limiting the discussion to the newsgroups you will always have access
to the six or seven regulars who check in daily - don't, however,
expect ot get much in the way of a wide-ranging discussion about
anything.

Ironically I think it is the "wide-ranging discussion" that got KJ to act. Yeap, NNTP has its flaws: No binaries, no images, et cetera. On the other hand NNTP and Doc's bbs are the last places you can connect with a real Atari. Probably not a frequently required perk but still kind of neat in its own way.

To a large extent the web boards are a bit of an illusion. For instance we traditionally honor intellectual property rights here so pirated software was frowned upon. We also are mostly non commercial once again from tradition that dates back to when NNTP was run on

college computers and it ads weren't allowed. Ever go to a party where people only talk in their little circle of friends? You put [anti piracy, pirates, non commercial, commercial, hankie fighters, why can't we all just get along?, ...] together in the same room you end up with a full room of people that aren't relating to each other.

There are other traditions that certainly predate my presence here. You would have to go back to the Cleveland Freenet and do some digging. I'm comfortable with the existance of NNTP and the few bbs's that remain. Kind of a secure feeling.

I'm not saying that NNTP is a "bad" or "worse" forum for discussion, what I am saying is that it is very much unknown to the vast majority

of online users and has a (very) limited discussion population.

Yes, web-based forums leave themselves open to abuse. But still,
that's where the people are.

It's hard not to use personal examples to agree with you. If you get here from google groups, there are ~288 c.s.a.8 members using their interface, me too. I started an SMF based board about ~2 months ago so I'd have a place to post personal junk and so far I have had to BAN over 1,200 users and have 400 members who haven't given me reason to ban them yet. I figure 90% of them are bots or spiders. That's certainly where the people are and abuse is rampant.

>... That's certainly where the people are and abuse is rampant.

Here in eastern Pennsylvania I take the Reading Eagle newspaper. It's

a pretty good sized-town and the paper is a typical large-town paper.
Last year they went to a web-based feedback forum to make it easier
and faster for people to respond and communicate with them. Last week
they stopped the service because of "rampant hate-mail and racist
abuse."

I dunno. Sign of the culture perhaps. The easier technology makes it
to communicate, the more people have to screw it up. Damn shame
though.

Dave.

I think the best straight Atari BASIC compiler is Datasoft's ABC
compiler. Anyone disagree?

Try this. I'm not really sure how the XIO command works with MyDOS or
BLOAD in Turbo BASIC for that matter. You may need a PLA or three in
there to clear the stack. The press any key still happens in the call,
You should be able to run it a couple of times to see if it messes up
BASIC or DOS. This one still uses bottom half of page 6 so you
shouldn't be able to use it with MAC/65 or DDT at the same time.

There was a demo for the XL that I had on disk (probably still
do, somewhere), which included the song "House of the Rising Sun."
If I recall the flashback I just had correctly, it had a lot of
trippy GRAPHICS 9 mode effects, and I think at one point a
big on-screen piano keyboard that went along with the music,

Ring a bell for anyone?

Almost :-)

It's better to go for a card that is specced up to 921kbit (the one you mentioned only supports 460kbit). Although you don't need the high bitrate for the Atari, it has the benefit of offering a finer grained bitrate control. So far I only implemented hand-crafted bitrate settings (for all Pokey speeds) only for 16C950 cards running up to 921kbit.

BTW: the terms to look for when searching are 16C950, 16C952 (or just short 950 / 952), Oxford Semiconductors, and of course 921kbit.

You have to look closely at the specs, some ExpressCards just use a crappy Prolific 2303 USB chip (which doesn't work at all with AtariSIO and even with AspeQt it works extremely badly).

> (It's $55 USD at that site, at least)

Ouch, this is quite expensive. I ran across several ExpressCards for some 15-25 EUR here in Europe, but so far I haven't tried one myself (I don't have a laptop with an ExpressCard slot).

Only if you really want/have to do a lot of disk imaging. Transferring floppy disks to the SIO2SD is a PITA because you can't create new ATR images directly with the SIO2SD. OTOH using atarixfer for that purpose is a lot more comfortable (you can name the ATR file when you read the disk, place it in the right directory etc.) and also faster (the data has to pass the SIO bus only once instead of two times, when copying with the Atari).

But I also wouldn't spend $55 for the card, this is a little bit too much (some $30-$40 would be my personal limit).

I'd say yes (if it doesn't work just bug me and I'll have a look at it :-)

> And when's the next release of AtariSIO? The latest version
> I see posted (0.30-pre2 from 2004-08-31) is older than the one I have!

Please use the development snapshots (current version is from 2010-02-28)
from the snapshots directory.

These snapshots are usually very stable (I only upload them when I did some
testing). There's quite some new code in AtariSIO (for example I rewrote
large parts of the kernel driver some time ago) and I was hoping for
a little bit more feedback from people using it. I don't know if anyone
except me tested the 16C950 code, maybe some people did and it's working
fine for them, but I never received any feedback about this :-(

So, for now I won't publish any planned release dates, I just do it
like the MPlayer guys (use the current snapshot) combined with the
Debian philosophy "it's ready when it's ready" :-)

> This is the right place to find it still, right?
>   http://www.horus.com/~hias/atari/#atarisio

Yes, the URL is still correct (just go to the snapshot directory).

so long,

Hias

Unless what you intend to copy is stuff you created yourself, you'll
probably find that most of the work has already been done for you, and
the ATR files are sitting in various online archives waiting for you to
use them. :)

> Is that not one of the many in the Compy Shop demos?

Sounds like it was. Someone sent me a graphics & sound demo ARC file
that included it (IC.COM inside GRSN2A.ARC). It must've been the
CompyShop that I saw it in originally.

And it was actually an early APAC style demo (alternating GR9/GR11).
Wish I had it to play at my Atari Party earlier this month. ;)
(Was too focused on new stuff, like "Pure" and "Polymatrix" demos
and "Yoomp!" and "Crownland" games ;))

Thanks!

Can anyone tell me where I can find a rom image of the original
Atariwriter cartridge? Every rom site I've found only has disk images
of Atariwriter Plus, not the original Atariwriter on cartridge.

Thanks.

I had originally downloaded it a while back to make a cartridge
out of it. Went to find it on my hard drive, but, it's such a
mess, so, I decided to relocate it online. I googled 'Atariwriter'
and clicked on the first link, a Wiki page. At the bottom were a
list of links to other sites, one being AtariAge.com so I went
there and it was a page about the Atariwriter cartridge, which
included a download link, and there you have it. 8^)

Try this. I'm not really sure how the XIO command works with MyDOS or
BLOAD in Turbo BASIC for that matter. You may need a PLA or three in
there to clear the stack. The press any key still happens in the call,
You should be able to run it a couple of times to see if it messes up
BASIC or DOS. This one still uses bottom half of page 6 so you
shouldn't be able to use it with MAC/65 or DDT at the same time.

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, and 800XE personal/home computers, and the Atari XE video game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from 1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

Today, the Atari computer intellectual property rights, along with the home market rights to the Atari trademark itself, are owned by Atari Interactive, Inc., a subsidiary of Atari, SA of Lyon, France.

This should do it, but I didn't test it a bunch. I moved the variables
to page zero, $CB-$CE or so which makes it a bit shorter and faster if
more colors need to be stuffed. Should work from BASIC or ASM/ED cart
now, MAC/65 may work but probably not DDT. It is in the upper half of
page 6 so even a BASIC INPUT A$ won't trash it. If you want to slow it
down replace that 9 in line 1030 with a higher number like 99. Makes
it a little easier to see if your display is glitching.

Just read a article on yahoo entitled "Atari Founder Revisits Roots with
Missile Command."

Below is the link if anyone wants to read it.
I'm not sure which Warner he is referring to, I suppose
it's Warner Brothers.
I still like the look of the XLs to the XEs but that's just one's
own taste to the case. All software is compatible except for
maybe a few programs that are specifically written.

http://videogames.yahoo.com/events/missile-command/atari-founder-revisits-roots-
with-missile-command/1390303

Can someone enlighten me as to what Warner did wrong on
the Brand?

Warner Bros. put a lot into Atari, but the game computer market
crashed, and Warner was losing a lot of money.
I'm not sure it was Warner's fault. Sega, Nintendo, were just coming
up, but the world sorta lost interest
in video games.   There was a split personality of whether Atari
should be a computer or a game consol.
Warner stopped development of a 16 bit computer/game machine, and the
talented engineers left.
The main engineer, Jay Miner, went to Commodore. The mistakes of
Commodore were worse than
Atari, just lots of waste and not much discipline. Then Warner sold
Atari to Commodore's Tramiel family
and Commodore's 16 bit machine went to Atari, and Atari's 16 bit
machine went to Commodore.
(Atari ST and Commodore Amiga). The ST never took off, neither did
the Amiga. I believe Atari
lasted longer than Commodore, but not by much. Today, Atari is
mostly valuable because of the
software that went with it, not the hardware.

Years ago, you may have seen this announcement about Java running on
an Apple //c:
http://www.desnoix.com/apple2/
Initially looked like they had pulled it off, but after a brief
inspection it was revealed for the April Fools joke it was.

This is no joke.

Announcing version 1.0 of VM02, the Java compatible VM for 6502 based
Apple II computers. Running on the full line of Apple II computers,
from the Rev0 Apple][with Integer Basic, to the last-of-the-line
Apple //c+, and everything in-between. Most basic features of a Java
VM are implemented to allow direct execution of standard Java class
files.

Download here:
http://sourceforge.net/projects/vm02/

Screenshots here:
http://sourceforge.net/project/screenshots.php?group_id=239665

There are a number of packages available to suit different
configurations. There are three ShrinkIt archives: the full version
supporting floating point numbers and demand memory swapping, a
minimal version without floating point or swapping to increase
available RAM for machines without an adequate swap device, and a full
version with debugging enabled for developers. There are also DSK
images available to help with "sneaker-net" installation.
VM02.EXTRAS.DO contains all the samples classes and the Character User
Interface classes. There are then the 64K and the 128K versions.
140K is just too small to have a combined image, so they have been
split apart. The VM02 version is for 64K machines, VM02E is for 128K
IIe and IIc machines. These are meant to install on a larger drive,
as no ProDOS is included on the image. Finally, there are the minimal
versions of VM02 (VM02.MIN.DO) and VM02E (VM02E.MIN.DO) for booting
and running on floppy-only machines (ProDOS included on the image).
The only difference in these images are the actual VM image, the
system classes are identical. To install on a hard drive simply copy
the EXTRAS image and the appropriate VM02 image to the same directory.

In order to fit in the constraints of a 64K, 8 bit, 1 MHz computer, some aspects of a JVM have been reduced or removed.

What is missing:
- 64 bit data types unimplemented
- Standard class library missing or limited implementation
- Lots of memory

What is implemented:
- Standard Java class file loading and execution.
- Full object inheritence
- Pre-emptive multithreading (4 threads max by default)
- Exception handling
- Arrays up to 15 dimension
- 32 bit integers and single precision floating point
- Garbage collection
- Demand memory swapping to RAM disk or other available volume
- Finalizers
- Software and hardware implemented timing
- Device drivers for common hardware (80 col/mouse/serial/uthernet/ graphics tablet)
- 128K memory support for //e and //c
- Full access to Apple II platform features

VM02 is implemented from scratch in 6502 assembly, optimized for the 6502 and Apple II platform. The entire VM fits in about 20K of RAM after initialization. This leaves about 30K of RAM available for data and code in the 64K version, or about 32K for data and 44K for bytecode in the 128K version. Not a lot, but Java was defined for small platforms so you can get some reasonable programs even in such a small space.

Performance is acceptable for a 1 MHz, 8 bit CPU; on par with the UCSD p-System VM used in Apple Pascal. As with any memory managed environment, garbage collection can really take its toll on the system. CUI (character user interface) programs will attempt to force some startup garbage collection and memory swapping to improve the initial response of these programs. Java can eat through 32K of RAM in no time. If you think the computer has locked up, a little patience will probably pay off with the resumption of execution. Demand memory swapping on an Apple II isn't the most brisk operation it can perform; CF disks and RAM disk greatly aid the speed of swapping. Other garbage collection operations involve defragmenting RAM - an accelerator will improve this.

All features of the Apple II are made available through either specific classes, a low-level class that can access ROM routines and memory, or both. A high-resolution graphics page is available for use with small programs. There is a device driver architecture that currently supports 80 column cards, the Super Serial card, and the Apple Mouse card with preliminary support of the Uthernet card and Apple Graphics Tablet. Probing for the Uthernet card can cause

problems in some machines with hardware VM02 doesn't detect. If probing for the Uthernet card causes the machine to hang at VM02 init time, hold down the Open-Apple key (or PushButton 1) during initialization and the Uthernet probe will be skipped.

Swapping from main memory extends the available RAM, dependent on the swap volume. VM02 will automatically take advantage of large hard drives or RAM disks for swap volumes, giving precedence to RAM drives. If you have a RamWorks card, you must load the ProDrive RAM drive software before running VM02 in order to use the extra memory. "Slinky" style memory cards are automatically used. IIgs computers should have a RAM disk of 256K or greater to use for swapping. AUX memory in the IIe and IIc computers is used for storing the Java bytecodes, thus freeing up main memory for data.

Class filenames are missing the ".class" suffix due to filename limitations, however the file type of $ED is used to identify class files and are given the type identifier of JVM. System classes are in the JAVA/* subdirectories. Apple II specific classes are found in the APPLE2/ directory. VM02 specific classes are found in the ORG/VM02/* subdirectories.

Included with VM02 are sample classes that show off the capabilites of the environment. They can be executed from the samples disk or copied to another location.

```
HELLO              - A simple text entry program
HELLOWORLD    - sample multi-threaded program
MOIRE              - Hires example, requires AppleSoft in ROM
HIRESDEMO - Another hires demo
RODSCOLORS    - Lores demo
SIMPLEPONG    - Lores demo with paddle input
TERMINAL      - Simple terminal program using the SSC
VOLUMES       - List online volumes
CATALOG       - Catalog a directory
LIST          - List a text file to the screen
STRESSMEM - Allocate 64K 2D array.  Stresses swapping code
TESTSELECT    - select() type call using mouse, keyboard, and timeouts
TESTCHAIN     - Chain to another class passing parameters and exit status
TESTARP       - Send ARP request from Uthernet card
TESTCUI       - Show off the CUI's controls (128K and hard drive install
required)
```

With this release of version 1.0, a file launcher utilizing the character user-interface classes is included to navigate through volumes and directories and execute Java classes. Files of type $ED show up as JVM executable files. Requires 128K IIe or IIc.

Ooops, was just about to ask what this had to do with my 800XL...glad I
read all the way to the end. :)

Cool! So if the JACE virtual filesystem concept worked for VM02,
then .class files should surface with file type $ED -- any aux type
needed or do I leave that as $0000? Only major kink is that JACE
virtual filesystem doesn't support writes. Is it possible to have
VM02 have a configurable block device (say /RAM on slot 5) for memory
read/write? Would be rather funny to run a java program that emulates
an apple which turns around and runs another java program. Or would
that be sick? Not sure. But it would be fun all the same. :-D

Thanks for all the work you put into this!

Use this HotLink and make a list for your Atari Want List and I'll contact
you! Sometimes something on your list may not be in my Atari Catalogs!
Make a list of HardWare/Accessories, Games/SoftWare, Books and References
for the Classic Atari 8 Bit and the Atari ST Computer Lines!

Not everything Atari you want are in my Catalogs! Many I havent added!
Do yourself a favor, E-Mail your WantList of Atari to Atari@aracnet.com
Be specific! Make the Subject: "ATARI WANTLIST" or use the WebLink below!

http://www.aracnet.com/~atari/maillist.htm   ATARI SURVEYS AND WANT LISTS!

I cant read your mind, so fill out the survey so I can get to know you. It
helps me figure out your Atari needs and Interests. Feel free to fill out
the Atari Survey on my Contact Page! Goto my Link above. Thank You.

Please Direct all Replies Through E-Mail to: BenSells@Atari.org or
Atari@aracnet.com. If you can't reach me, see my info at the Bottom!

In Europe the ST (and later the Amiga) did extremely well and at one point was
outselling some of the major but early PC vendors.

I was using the AUX values when writing out the swap files but
Virtual][wasn't always returning the same value I wrote. Since I
was placing the reference count of the memory block in the AUX value
it caused real problems when this would come back as zero. So I don't
use the AUX value any more. In fact, the file type isn't required,
it's just used by the launcher to identify class files. You can try
and run any file type from the command line.

>=A0Only major kink is that JACE

>

If the memory block comes up as a /RAM disk, then no problem. Also,
if you run the minimal versions, they won't do any writes unless the
class does. You can't run any of the larger classes (like Launcher
and TestCUI) because they require swapping.

> Apple II computers.

I downloaded it and tried it out...

1) disk has no DOS. you must boot prodos from another disk
2) after prodos is booted, you need to change the prefix to /java,
so at the] command prompt, type:
]prefix /java
3) -java.system shows the readme.txt file. a spinning cursor in the
lower right corner indicates the VM is doing something in the
background? then on the bottom of the screen in inverse it says
"press esc to exit, arrows to scroll". the spinning cursor is gone.
escape key does nothing, arrows do nothing.

I am using applewin 1.18, mouse card enabled. Enhanced //e mode.
Prodos 2.0.3 from the prodos system disk 4.0.2

I downloaded the SHK from :

http://downloads.sourceforge.net/project/vm02/vm02/vm02-rel1/vm02.rel1.shk?=
use_mirror=3Dsuperb-sea2

and converted to a 5mb .PO hard disk image.

Am I doing something wrong?

Rich

I've a SIOtoPC that I bought new awhile back.

I would like to use it with an Atari MegaSTe and or an Atari
Falcon using the serial ports.
What I'd like to do is have it connected and
transfer files to the Atari 8-bit from the STe or Falcon and to
the STe or Falcon from the Atari 8-bit.

Has anyone tried to do this?
Or is it even possible with the SIOtoPC hardware as is?

SIOtoPC Software

I'd like to know what software currently works with the SIOtoPC?
Which software to use when connected to a PC with Serial ports.

And if anyone has used any other software such as a telecommunications
program for any computer system, I'd like to know what will work, if
anything else does.

AtariMAX USB cartridge

I also have a USB cartridge for my 8-bit from AtariMax that I bought new.
Has anyone came up with any fun projects for it?

Can any files be sent thru it to a USB port on a PC or
anything else?

If so, what software would I need?

Any info, discussion is welcome...

Barry

Greetings,

I read some postings in here awhile back relating to copyright/patents.

Something about the dmca was mentioned .

I'd like to know if anything related to early computers such as atari, has
been discussed/changed in the world of copyright/patents.
Especially things related to program and file formats, video, audio and etc.

I have some knowledge, but would like to read anything interesting.
Also, any links where past and current info can be found would be useful.

Only thing that counts is the most recent and what applies to digital.
google 'Digital Millennium Copyright Act' for the skinny. Doesn't
matter if Margaret Mitchell's family still has the copyrights to Gone
with the Wind or Disney copyrighted Mickey Mouse, digital is treated
different. People can form their opinions for themselves but IMO [old,
no platform, no support, no market] =3D> no longer under copyright
protection according to the DMCA. It's still a little vague in that
they don't say a date or platform or market size.

Patents run ~19 years, mostly fixed but there are ways around it.
Complain FDA testing delayed market introduction of your medical
device to get an patent extension for instance. Everything Atari is
long off patent.

There are no patent or copyright police. All intellectual laws do is
give you grounds in a civil suit. All you can recover are damages and
shut someone down/prevent them from using or distributing something.
If someone is ordered to stop distributing copyrighted material or
infringing on a patent and don't, contempt of court and time in the
Gray Bar Motel.

There's still ways for companies to evade the intent of the law and
some of them may be legit. For instance you would probably get in
trouble if you used a plumber with a big mustache in a game because
his image is copyrighted. I heard some companies were copyrighting the
images of their ICs. Kind of ironic in that everything digital in a
cart may be fair game now but don't try to make a copy of the orginal
box.

Not entirely true... Customs Enforcement can and will seize items that
violate US patent, trademark and/or copyright laws. The FBI and Treasury
Dept. routinely roll up folks that illegal duplicate and distribute media.

However, as with most things in this county these services are rendered to
those sitting on the largest piles of cash.

Do you happen to know the background process for this? Specifically
how is John Law made aware of things like Rolex or Armani knockoffs?
Donate a million bucks to some /senators reelection campaign or
something?

I'm under the impression that you can't just call up the local sheriff
and tell him your being repressed. Every case I have been involved
with goes through a process of starting with nasty letters drawn up by
lawyers<stop or we'll lawsuit the piss out of ya> followed by
depositions and proceeding through court orderred redress of
grievances. True my experience has only been with patents but I
imagine it works the same way for other intellectual property.

Remember the Windows look and feel vs. Mac stuff? If Apple could of
done it w/o going to court by just having a cop put a padlock on MS
headquarters door I'm sure they would have. You can't just accuse
someone of something and have it stick, writ of habeas corpus type
thing.

writ of habeas corpus was suspended by George Bush via the homeland
security and/or patriot acts.

Do you happen to know the background process for this? Specifically
how is John Law made aware of things like Rolex or Armani knockoffs?
Donate a million bucks to some /senators reelection campaign or
something?

I'm under the impression that you can't just call up the local sheriff
and tell him your being repressed. Every case I have been involved
with goes through a process of starting with nasty letters drawn up by
lawyers<stop or we'll lawsuit the piss out of ya> followed by
depositions and proceeding through court orderred redress of
grievances. True my experience has only been with patents but I
imagine it works the same way for other intellectual property.

Remember the Windows look and feel vs. Mac stuff? If Apple could of
done it w/o going to court by just having a cop put a padlock on MS
headquarters door I'm sure they would have. You can't just accuse
someone of something and have it stick, writ of habeas corpus type
thing.

Rick, you said Digital is different.
How are they defining digital?

If I photograph something, I can copyright my photo on paper as well as
in a digital format correct?

It applies narrowly to software if I read it correctly. For instance
the Atari OS chips binaries would be fair game but the OS source
listing as published in ~"Atari 800/400 Technical Reference" would
still have parts that would fall under the same copyrights as books.
Nothing is official until it gets tested in courts and afaik there
haven't been any cases yet. Kind of stupid the way the system works in
that we have laws but if someone doesn't like the law they can appeal
all the way to the supreme court. Even the supreme court makes
mistakes that have to be reversed, see Dred Scott decision.

Lower courts apply what is on the books and higher courts decide if
that decision and the law itself are good.

I've been there: What first happens is civil court, an appeal, a judgement which can be made public in which case it becomes law/ guidline for lower courts for now or it is sealed/not published which kind of indicates it was a crappy decision by the lower courts but not bad enough to embarass them by publically by reversing it, followed by appeal to the state supreme court followed<?> by supreme court on constitutional grounds. i.e. the copyright holder makes a case they are unlawfully being deprived of their property. At the higher stages of appeals the court can just decide they are too busy to hear the case. They can even kick the case back down to a lower court if they feel like it. If either the plaintiff or defendant blink at the $1/4 million or so it takes to do this, case is over. For the record nothing I have ever been involved with went beyond the state supreme court.

Unless the people involved are spiteful lawyers with a lot of time on their hands it would be too expensive to litigate. Something like WordStar for CP/M or PKARC for DOS probably don't generate a lot of income. If someone wants to run a copy of WordStar under a CP/M it wouldn't make a lot of sense for MicroPro to rise from the dead to sue. If a new iPhone is distributed with WordStar on it maybe it would get some interest but that is at the heart of the problem, nobody at Apple would be that stupid. Big targets aren't that stupid and little targets aren't worth it.

I can't remember which lawyer said this but it came out something like ~"being wrong doesn't stop you from filing a lawsuit, it just stops you from winning."

That action culminated in the beheaded Charles I <Cromwell, great
flick!>. There was a movement to have the same remedy applied to Mr.
Bush until someone pointed out that removing his head, lacking any
vital organs, would not have a significant effect on his health.<grin>

http://www.youtube.com/watch?v=AknyR-kRvLc
lmao

Ten minutes of your life you will never get back.

Halted Specialties used to have a pile of 5200 motherboards for $7;50
each. I would buy them for parts since they had all the Atari custom
chips except the 6520 but that was commonly available anyway. An old
girlfriend's sister used to work in Atari customer support. She would
laugh and make fun of the people who called up complaining about their
5200 system. I figured nobody would miss a 5200 on a plate vs. using
the parts to get something useful like a 800XL running. I still have
one 5200 MB left but I saw the Atarimax 5200 flash cart and thought I
should double check if the system was suddenly seen as worth
preserving. I found that Youtube video and it refreshed my memory! I
don't think anyone will miss it.

Anyway, I'll see if I can get the 5200 MB to boot, it is the older 4
controller model. I've been wading through the tech ref and my plan of
using a 130XE with an Action! cart as a development system seems to be
going well. Soon as I get a "Hello world" demo to run I will pack it
in. I be thinking the 5200 would make a better computer then an 800XL.
For instance if I just decode the memory map with something like a
GAL22V10 I can put chips back in their original 800 location, use an
800 OS, keep the $C000-$CFFF open for banked ramdisk, have 32k
available as cart space. I want to lose all the conflicts with video
and interrupts glitching while switching banks like we see in a memory
expanded system based on banks in the 32k-48k region. I grow tired of
the PIA bits being used for bank switching. It could work like any of
the existing designs i.e. toggle address bits like the OSS Supercarts
or actual memory mapped register like a 74LS374 or even another PIA
just for that purpose.

Rick

Hi all,

I'm looking for a working 130XE motherboard or complete system. If you
have an extra one you're interested in selling, please let me know at
orders1nospam@whizzosoftware.com (remove the nospam from the address).

Thanks!

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, and 800XE personal/home computers, and the Atari XE video game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from 1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

Today, the Atari computer intellectual property rights, along with the home market rights to the Atari trademark itself, are owned by Atari Interactive, Inc., a subsidiary of Atari, SA of Lyon, France.

Many suggestions... but one -very good I think- is missing!

Have you heard about the SIO2USB-Interface? It plugs directly into your
ATARI Computer and connects it with an USB-Stick.

So to copy a disc, connect your ATARI to the 1050 and the SIO2USB. Plug
an USB-Stick in the SIO2USB and select it as drive2. Then copy your
discs with any sector-copy program to the USB-Stick. That's it!

Look here for more information about the SIO2USB or conntact me:
http://home.arcor.de/grasel/restarte.htm

Hi Barry,

I also ordered but have received noting nor reply from atari max
(april 2010). For your qeustion: You need the software from atarimax
for extracting files from the atari or reading in .atr files (atari
emu games for instance) from your pc. I gather your pc then behaves
like a atari disk drive.

ps How long before you received your sio to pc interface. I live in
europe. Maybe that's why it takes longer...

cheers Henk

Foggy memory but I seem to recall about 3 different keyboards were
made for
the XL. You are right, blowing probably won't do anything. Some of
the
keyboards if not all used a couple of sheets of clear plastic with
printed
traces and contact patches on them like a sandwich. Push a key in, it
squashes the layer with the conductive pad onto the one with the
traces.
Good news was it was sorta spill proof, bad news is after 25 years
they
are starting to deteriorate. SOP is to pull it apart and clean the
traces
with something that doesn't attack the plastic and repair the traces
with one of those conductive inks.

It isn't hard, just tedious. The ~20 tiny screws holding it together
are
really cheap and strip if you look at them wrong. I'm kind of ham
fisted so it'll probably be a snap for you.
I just looked at
http://www.best-electronics-ca.com
and didn't find replacement mylar for the XL. They did have it for
130XE types and looks like they have 1200XL keyboards<$45!!!>. I would
shoot them and
http://www.myatari.com
an email just in case. myatari aka B&C has 800XL pull keyboards for
$25,

Just trying to save you a buck. I think the last bottle of conductive
ink I
bought was ~$16 and I got charged ~$10 shipping.

Rick

I did a search at Best, and they have some QWERTY keyboards for
the 600xl/800xl here about halfway down the page for $30 each.

russg <russgilb@sbcglobal.net> wrote:
> Just a general rule. Initialize variables before using them.

Oh they are in the real game:

```
  FOR P=0 TO 3:X(P)={some math}:Y(P)=0:XM(P)=0:YM(P)=0:NEXT P
```

Recall that my first annoyance was a dim-out-of-bounds (ERROR 9).
Sorry my off-the-top-of-my-head example code I typed onto my
Usenet post was not complete enough. ;) (And certainly, in
the example, "P" was initialized by the FOR statement. Hehe.)

The math errors were ones where it was pretty obvious that
TurboBASIC XL's runtime's idea of:

```
  IF VAR < -number THEN ...
```

was wrong. The game worked fine, until something (vertical
position ("Y(P)") or speed ("YM(P)") was negative, then it
was buggy. And it worked fine all the time, when running
under the interpreter.

Digital Millennium Copyright Act

The current administratively-created exemptions, issued in November 2006, are:

Computer programs and video games distributed in formats that have become obsolete and that require the original media or hardware as a condition of access, when circumvention is accomplished for the purpose of preservation or archival reproduction of published digital works by a library or archive. A format shall be considered obsolete if the machine or system necessary to render perceptible a work stored in that format is no longer manufactured or is no longer reasonably available in the commercial marketplace. (A renewed exemption, first approved in 2003.)

I really have to get out more, I never noticed this when it first came out. I'm no lawyer, barely a chemist anymore, so some of the wording seems arbitrary and open to interpretation. "reasonably available in the commercial marketplace" Who says what's reasonable? I can't go to Macy's and pick up an Atari 400 so does that mean everything Atari 8 bit is fair game eventhough Atari lives on with a paper trail of corporations buying it for name recognition value.

A more practical example of arbitrary may be something like the Black Box. I think Bob Puff is on record as saying he would do another production run *IF* there was enough interest => commercial. Its like one of those bad Star Trek episodes with a pretzel logic bomb.

Out of curiosity, anyone know how many BBs were produced?

The court, on a "case by case basis", this is what it means. As most
other laws, it is a guideline that is to be followed, no precise definition.

So long,
     Thomas

<sigh>
It seems like a consequence of electing lawyers to make laws. I've
been
peripherally involved in intellectual lawsuits. The company I worked
for
had to defend several products from competitors and some even from
clients. i.e. if you don't wnat to pay royalty fees one 'percieved'
way out
was to attack the patent for prior art. We had several excellent
patent
attorneys but I think we also had to go with outside attorneys that
specialized in trials. Punch line is I remember giving a deposition
where it cost more per hour to park my car then I made!

Its one of those things that the general public doesn't quite get.
Intellectual
protection doesn't have copyright or patent cops working for the
government
that arrest violators. All it does is give you the right to take it to
court. This
looks like it is intended to get more lawyers employeed.

This doesn't change anything, a copyright holder could have taken it
to court
before. All it does is issue a "Take it, you may get lucky" kind of
statement.

Rick

I fell in love with the net and all the compuiter teahcnology in the very early years and have loved it ever since, I have an IT Degree and Communications degree and will be working on my doctorate for the next five years, in bwetween I design websites, databases, Multimedia Produxction or anything that wil make me a penny, just student scraping by. But Guess what? I don't want your money, your e-mail, or anything. Each of these sites has a specific topic but they have them style and layout sothey are easy to navigate and ther a search function should take you to exactly where youwant to, or just explore, they have outside service you can acccess as well. Each site has 10,000 plus articles and they are updated everyday so you know you are gettin up to date information. ENough, here the computer and tech related sites.

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, and 800XE personal/home computers, and the Atari XE video game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from 1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

Today, the Atari computer intellectual property rights, along with the home market rights to the Atari trademark itself, are owned by Atari Interactive, Inc., a subsidiary of Atari, SA of Lyon, France.

NEWSGROUP BACKGROUND
comp.sys.atari.8bit was created in November 1986 (as part of the Great Renaming) as a direct replacement for: net.micro.atari8

comp.sys.atari.8bit is unmoderated, and has no formal newsgroup charter.

The comp.* hierarchy of Usenet newsgroups is managed by the Big-8 Management Board: http://www.big-8.org/

RELATED USENET NEWSGROUPS
  alt.binaries.comp.atari8bit
    Programs for Atari's 6502-based orphans.

  comp.sys.atari.advocacy
    Attacking and defending Atari computers.

  comp.sys.atari.announce
    Atari related hard/software announcements. (Moderated)
    Moderator: Kevin Savetz
    comp.sys.atari.announce web page: http://www.atariarchives.org/csaa/

  comp.sys.atari.programmer
    Programming on the Atari computer.

In keeping with my scheme of getting a thing or two backed up to the
web archive I documented a hack I did years ago. I may have posted it
to the group or I may have only told Jeff McWilliams.<a name out of
the past!>

In my usual left handed and crosseye logic I decided to buy my own

domain name and post to it. I have a real beef with doing it to web site not under my control. For one thing I don't want it to be too dilute. You look at just about any web site with a forem and between the hankie fights and warez type posts the 'good stuff' gets lost in a crowd. I love the way google archives this group but no binaries kind of limits what you can do. Even with google search you still have trouble finding the post you are looking for.

It won't be much of a web page. I looked at the programming site Bill referenced and it looks great. Problem is they offer free programming and instruction and get no takers.

Easily 90% of my original code is gone. I may put up some other examples from various sites just so I have a central location to keep stuff.

Anyway, could someone check this for accuracy?
http://www.ataricorpse.com/index.php?topic=6.0

It is from memory about 10 or 15 years ago so... I also noticed and corrected an error in the schematic so it may not reflect the original that is floating around the web. The original had the pinout of the 74LS138 labeled wrong.

Rick

"The Act" is a prototype arcade game that utilizes cartoon drawings (kind of like a modern take on old laserdisc games like Dragon's Lair and Space Ace), but which is controlled using a knob.

http://en.wikipedia.org/wiki/The_Act_(video_game)

Depending on the scene, the knob controls different
aspects of the game. For example, in one scene, the
main character that you control is attempting to flirt
with a woman. The knob controls how 'bold' the
character is at any given point. (You can become so
seemingly-disinterested that she gets up and leaves,
or come on so strong that she slaps you -- in both
cases, you lose.)

To do a game similar to The Act, you'd need gobs of
RAM or fast access to video frames (e.g., hard drive),
unless you get really clever about it.

But... we have a paddle, at least. ;)

I think the controller on The Act was a rotary
controller, so it could spin all the way around.
A game like this could be done with paddle,
trakball or rotary controller, I think.

Just thinking out loud. Back to work,

hehe!

http://etchartist.com/

I loved my paddles but mostly for taking apart so I could build goofy
stuff like temperature sensors. I think I may still have a "driving
controller" somewhere. I'm not sure if the general public realizes
they used the direction coding system that begat trackballs, ST
mouse, ... I did hate paddle drawing programs and I could never get
good results from a Micro Illustrator pad. I did like bbk art but the
copy I just down loaded seems to be busted. Doesn't work with the

emulator anyway.

Seems like a lot has been learned about human interfaces since the paddle days. I could almost see doing things like ptrig off X-axis motion, ptrig on Y-axis motion, ptrig click toggle pickup/drop, ptrig double click toggle select.

I thought you became a relative expert on character mode graphics? I mean anything that can be displayed in a graphic 15 mode can be done in a 1k graphic 12 mode plus a FONT. Back in the day it used to distress me that people used modes 8 and 15 when the obvious solution was a character mode. Matter of fact it still kind of bugs me! The only program I wrote back then that I really miss were a combination character set and playfield editor that did the gr. 15 to 12 conversion. I even contacted a friend from the bbs days to see if he still had a copy of its download section.

Rick

Nah, not really. :) I just invented that 'Super IRG' flickery mode for one of my games. A fellow named Bobby has since gone and invented a bunch of related modes, and is making a fancy new editor.

(Closest thing I can find to a reference is this text file hosted at AtariAge. I'll leave it as an exercise to someone

with more patience with web forums to figure out what actually
links to this:

These days there seem to be a number of applications (mostly
MS Windows ones?) that can convert a graphic into a set of
character sets and the character data. Many demoscene visuals
seem to utilize charactersets to do some of the animated screens
(versus using bitmapped modes).

One that comes to mind is a funky text scroller by Hard Software,
where it's obvious that they way they got three scrollers on the
screen next to each other was by simply blitting the scrolling
text into the font. The actual data on the screen is static
(just a matrix of characters, repeated three times).

Now you've been doing the linux thing you really know
what a programming environment is. Let me preface
this with I don't like 'integrated development environments'
I like to roll my own. Even when I was mostly on my
Atari I usually had my SDX cart plugged in with Action!
on top and an asm/edit ROM replacing the built in BASIC
so I could go back and forth. I like using a multi tasking
computer just so I can have an editor open, a compiler, and
an emulator. Nothing like a robust programming environment
where if one thing crashes you just have to close a window.
Problem is I have tried some of the utilities and they don't
work the way I like to work. They work better then the
originals but they don't work the way I want to.

I used to make my character sets with bbkart and import
them directly into my conversion program that worked as
a play field editor. I could write out screens and character

sets from there as either screen data or strings to be used
in my programs. It was bone head simple: Just skip the
first 4x8 corner of the micro illustrator pic so you would
have a 'space' character then draw on the top ~24 lines.
I'll keep poking around and see if I have anything I made
with that set up.
>

I suck at art and music. I am pretty good at using what
is available.

Anyway, if you remember that Action! demo 'Pretty'
the color scrolling works in character modes. Lot of
overhead but each pixel of a gr. 12 character could
have ~4 pixel wide in four colors by 8 pixels high with
8 colors per each horizontal line, sort of like Rambrant
with one extra color. I'll see if I can knock something
out to show you what I mean. Downloading a Sea
Monkey update on dial up so I may just take a nap
instead!

Here's a quick and dirty program I wrote to slop some colors up. It
works with the emulator. You have to press reset<F5 in Atari800win> to
get back out. I couldn't think of a good way to change colors smoothly
so I just loaded the vert count, stored it in first color reg, shifted
it left, stored it in the next color reg, et cetera.
Anyway, mucho colors. I left them static, vs. rainbow, on purpose so
you could get a look at them. If I resurect a dungeon diving program I
wrote I may do something like this except shading like Dungeon Master.
Not much hope for that at the momment, this getting back into
programming is knocking the stuffing out of me.

```
20 FOR N=3D0 TO 28:READ PROG
30 POKE 1536+N,PROG
40 NEXT N
50 GRAPHICS 12+16
60 MSC=3DPEEK(88)+256*PEEK(89)
70 FOR N=3D0 TO 959:POKE MSC+N,N/4
80 NEXT N
90 X=3DUSR(1536)

Use this HotLink and make a list for your Atari Want List and I'll contact
you! Sometimes something on your list may not be in my Atari Catalogs!
Make a list of HardWare/Accessories, Games/SoftWare, Books and References
for the Classic Atari 8 Bit and the Atari ST Computer Lines!

Not everything Atari you want are in my Catalogs! Many I havent added!
Do yourself a favor, E-Mail your WantList of Atari to Atari@aracnet.com
Be specific! Make the Subject: "ATARI WANTLIST" or use the WebLink below!

http://www.aracnet.com/~atari/maillist.htm   ATARI SURVEYS AND WANT LISTS!

I cant read your mind, so fill out the survey so I can get to know you. It
helps me figure out your Atari needs and Interests. Feel free to fill out
the Atari Survey on my Contact Page! Goto my Link above. Thank You.

Please Direct all Replies Through E-Mail to: BenSells@Atari.org or
Atari@aracnet.com. If you can't reach me, see my info at the Bottom!

Very unusual. I'm not familiar with graphics 12, seems be character
mode.
It didn't go to attract in my emulator.
I had problems saving/listing to MyDOS. Worked SpartaDOS 3.3A.

Guh? Never seen IRG text? :) There's also GRAPHICS 13, which is
double-height (so it gives you 40x12 characters, where their
pixels look like GRAPHICS 7 mode: 160x96. GRAPHICS 12 is 40x24
characters, just liek GRAPHICS 0 mode, but the pixels look like
GRAPHICS 15 mode: 160x192).

Pretty much what you use when you want multicolored tiled graphics.
(For single-colored, which I did a lot as a kid before I coded up
a reasonable multicolor font editor, one typically uses GRAPHICS 1
or 2, the 20x24 and 20x12 text modes. Those end up looking very
Commodore VIC-20'ish :))

> It didn't go to attract in my emulator.

I don't understand Rick's ML, but it's either a Display List Interrupt,
or acting a lot like one (alterting color registers in GTIA each
scanline). So Attract Mode wouldn't affect it, since the colors
that the OS's attract routines come up with would getting
overridden by the raw writes into GTIA.

I suck at emulator<grin>. Really it is taking me forever to come back
up to speed. I think I do like the emulator for the access to the hard
drive as the H: device. Tourturous path but I've been working on a:
Dungeon Master clone on Windows screen shots to conversion to BMP to
Atari. All I do is save the BMP to the emulator directory and I can
read it direcly i.e. OPEN #3,4,0,"H:PIC133.BMP"

I posted a progress so far picture
http://www.ataricorpse.com/index.php?topic=3D10.0

I think I know exactly what I did wrong. IBM uses a color pallet so if
you have colors close together I am dropping them with too simple of
an import. Something like a picture in 15 shades of gray and one white
reduced to two colors.

I was always disappointed more articles weren't written on GR.12. A
little data in some of the hardware books that left it to you to find
out how its done. I think most of the good games like Frogger used it
for all the advantages it gives you with reduced memory requirements
and extra color. A simple to use tool is on my todo list.

Rick

I'm proud to announce version 2.13.2 of cc65. cc65 is a complete cross
development package for 65(C)02 systems, including a powerful macro assembler,
a C compiler, linker, librarian and several other tools.

cc65 has C and runtime library support for many of the old 6502 machines,
including

  - the following Commodore machines:

        VIC20
        C16/C116 and Plus/4
        C64

C128
CBM 510 (aka P500)
the 600/700 family
newer PET machines (not 2001).

- the Apple][and successors.

- the Atari 8 bit machines.

- GEOS for the C64 and C128.

- the Nintendo Entertainment System (NES).

- the Supervision console.

- the Oric Atmos.

- the Lynx Console.

The libraries are fairly portable, so creating a version for other 6502s shouldn't be too much work.

This version is a bugfix release against 2.13.1. Changes have been made in the following areas:

* Some error corrections in the docs.

* Added a document that describes how to use the cc65 toolset with a currently unsupported hardware platform. Constributed by Bruce Reidenbach.

* Fixed crlf->lf conversion problem in .INCBIN (ca65).

* Fixed problems with 80 column mode (C128).

* Added C64 mouse driver patches by Greg King to remove "crosstalk" between mouse and keyboard.

* Fixes for the ptvjoy drivers (C64, C128, VIC20) by Marco van den Heuvel.

* Fixed an optimizer problem (cc65).

* Use the drive from which the program was started as default for all following file ops (Commodore machines). Patch by Oliver Schmidt.

Precompiled binaries are available for the most common platforms. On many other host platforms, the sources compile out of the box, so you'll able to create your own binaries.

For RedHat Enterprise Linux 5, ready made RPM packages are available. These packages may also work on other rpm-based Linux systems. Please note that there are separate RPMs for the compiler proper, the docs, and the target specific libraries. To develop code for one of the target machines, you need the compiler RPM package *and* one of the target machine packages. Be sure to

download the documentation package if you're new to cc65.

For windows users, there's a user friendly installer package (the one with the .exe extension). All subpackages are selectable from within the installer dialogue. The installer will also setup the necessary environment variables and start menu entries. It is recommended that Windows users choose this package instead of the .ZIP files.

Precompiled binaries for DOS, OS/2 and Windows are available in ZIP archives. As with the RPM packages, you need the package for the development host system (Windows or whatever) *and* one or more of the target machine packages, plus optionally the doc package.

All packages are available from the MU software FTP server:

        ftp://ftp.musoftware.de/pub/uz/cc65/

More information on cc65 can be found on the cc65 web page at

         http://www.cc65.org/

There is also a mailing list for discussing cc65 related issues (programming, suggestions, bugs, ...). See

        http://www.cc65.org/#List

for information on how to subscribe to this list.

While I'm the main developer of cc65, it is actually a joint effort. I would like to thank the target library developers, all the people on the cc65 mailing list, all those sending suggestions and feedback, and even those bugging me for a new stable release:-) The CREDITS file is probably incomplete, but you know who you are.

Thank you!

         Uz

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, and 800XE personal/home computers, and the Atari XE video game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from 1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

Today, the Atari computer intellectual property rights, along with the home market rights to the Atari trademark itself, are owned by Atari Interactive, Inc., a subsidiary of Atari, SA of Lyon, France.

I don't know if you care or want an explaination or if I can give one w/o a mistake or two, doing this on the fly. I guess the information is the reason for the newsgroups existance is probably good'nuff for me to go off.<grin>

One of the best explainations I ever heard about assembly language programming on a 6502 is that it is just like BASIC except you only have 3 variables, [A, X, Y] and 64k memory locations. Actually you have a hardware stack too! The nemonics translate directly into higher level languages that we are all familiar with.

$600 PLA
=3D> Pull A <reg> variable from the stack.
It is done in hardware vs. software stack so indexing is automatic. It is a shared stack that is used by both hardware and software so it is easy to corrupt it. This won't actually run<I think> but just using it for an example.
BASIC equivalent of stack would be something like

```
;
10 STACK=3D1791;top of page 6
;1st bit of info to pass the #60 and move stack pointer down
30 POKE STACK, 60:STACK=3DSTACK-1
;2nd bit of info, can't POKE more then 255 so convert to 2 bytes
40 POKE STACK,0:STACK-1;low byte
50 POKE STACK,6:STACK-1;high byte
60 GOTO 1000
70 REM YADA YADA YADA continuation of program

;Since we put 1536 on the stack this would execute a ML routine on
page 6
1000 A=3DUSR(PEEK(STACK)*256+PEEK(STACK+1)):STACK=3DSTACK+2
;Load return address into variable A REM we only have A, X, Y
1010 A=3DPEEK(STACK):STACK=3DSTACK+1:GOTO A
```

So with a stack your program becomes a little longer with the pushing and pulling stuff from the stack but in the example we only used a page of memory and a single working variable A to do stuff<STACK is hardware in a real 6502 that does half the stuff automatically>. In a 6502 registers are silicon real estate so you can't have thousands. Long explaination for the PLA which is just here because BASIC puts the number of arguments on the stack which in this case is #0!

$601 LDA $D40B VCOUNT; same as A=3DPEEK($D40B) VCOUNT is just the screen line being drawn divided by 2 I think, so for a 225 scan line NTSC it goes to ~130, accurate info in 'Mapping' I don't care about anything for this other then it changes!
$604 STA $D40A WSYNC; same as POKE $D40A, A so color changes don't occur in the middle of a line
$607 STA $D016 COLPF0; POKE COLPF0, A
$60A ASL A; A=3DA*2 actually a shift operation but *2 is the result

```
$60B STA $DO17 COLPF1; POKE $D017, A
$60E ASL A; A=3DA*2
$60F STA $D018 COLPF2; POKE $D018,A
$612 ASL A; A=3DA*2
$613 STA $D019 COLPF3; POKE $D019, A
$616 ASL A; A=3DA*2
$617 STA $D01A COLBK; POKE $D01A, A
$61A JMP $0601; GOTO $601
```

As far as interrupts go I didn't use them for reasons that can be explained. First I am using graphics 12 which is a character mode so the display list where you would normally do a DLI is only 24 mode lines of visible screen. You can only do one DLI for every 8 scan lines/character. Its all good, I mean I could have changed the 5 colors 24 times but then I would need a different display list and register saving during the interrupt so really a PIA for just something I wanted to demo the number of colors available *AND* have them change on every scan line w/o flicker. We are used to graphics 0 being a on/off or high/low lum mode but change the line 50 to GRAPHICS 0 if you want to see something a bit unfamiliar! You get graphics 0 in multi color mode.

Thinking about it, it's almost the opposite of interrupt code. I mean if I wanted to do something useful or entertaining I would transfer the control of the little code snippet to run something during the VBI while I am not busy with the screen. The useful part would have to finish before the screen started refreshing and so it could return control to the hardware color register stuffing part.

Kind of academic but I think you could load the index registers with fixed memory points so you could have the equivalent of ~130 color registers available on a scan line basis. The equivalent of RAMBRANT but instead of memory hungry modes like graphics 15 or 8 you could use the character modes.

Rick

If you change line 50 to GRAPHICS 8, then it makes the nice static
rainbow.

Use this HotLink and make a list for your Atari Want List and I'll contact
you! Sometimes something on your list may not be in my Atari Catalogs!
Make a list of HardWare/Accessories, Games/SoftWare, Books and References
for the Classic Atari 8 Bit and the Atari ST Computer Lines!

Not everything Atari you want are in my Catalogs! Many I havent added!
Do yourself a favor, E-Mail your WantList of Atari to Atari@aracnet.com
Be specific! Make the Subject: "ATARI WANTLIST" or use the WebLink below!

http://www.aracnet.com/~atari/maillist.htm   ATARI SURVEYS AND WANT LISTS!

I cant read your mind, so fill out the survey so I can get to know you. It
helps me figure out your Atari needs and Interests. Feel free to fill out
the Atari Survey on my Contact Page! Goto my Link above. Thank You.

Please Direct all Replies Through E-Mail to: BenSells@Atari.org or
Atari@aracnet.com. If you can't reach me, see my info at the Bottom!

If you change the ML program to

```
        *=3D$600
        pla
loop
        lda $d40b
     bmi inkey; bails when $d40b>128
        sta $d40a
        sta $d016
        asl a
        sta $d017
        asl a
        sta $d018
        asl a
        sta $d019
        asl a
        sta $d01a
        jmp loop
inkey
```

```
     lda 764
     cmp #$FF
     beq loop
     lda #$FF
     sta 764
     rts
     .end
```

You can return gracefully to BASIC with "Press any key".

BTW: I am using a version of TASM from ~199x. I probably should 1) get current version and pay shareware fees or 2) start using a freeware assembler. I think the currently available version of TASM would work but I haven't tried it.

Feels good to get some of the old brain cells firing again. I'm so rusty I can't do decimal to hex conversion in my head anymore, i.e. sta 764, and had to look up the BMI instruction to make sure it does what I thought it did.

Rick

I'm having trouble with it. It seems to me $D40B never goes
negative. It returns the line divided by two,
which would be a max of 127. I put it into the BASIC program and it
doesn't work for me.
Can't get it to work in ASMED either. Uhmm.. My ML for beginners
says never use BMI,
use BCC or BCS instead, don't get that either.

I got it to work like this:

```
10  *=3D$600
20  PLA
30 LOOP
32  LDA $2FC
34  CMP #$FF
36  BEQ INKEY
40  LDA $D40B
60  STA $D40A
70  STA $D016
80  ASL A
90  STA $D017
0100  ASL A
0110  STA $D018
0120  ASL A
0130  STA $D019
0140  ASL A
0150  STA $DO1A
0160  JMP LOOP
0170 INKEY
0210  LDA #$FF
0220  STA $2FC
0230  RTS
0240 END
```

And in BASIC.

```
20 FOR N=3D0 TO 41:READ PROG
30 POKE 1536+N,PROG
40 NEXT N
50 GRAPHICS 8
52 GOTO 90
60 MSC=3DPEEK(88)+256*PEEK(89)
70 FOR N=3D0 TO 959:POKE MSC+N,N/4
80 NEXT N
90 X=3DUSR(1536)
91 GRAPHICS 0:? "DONE"
92 DATA 104,173,252,2,201,255,208,28
100 DATA 173,11,212,141,10,212
105 DATA 141,22,208,10
110 DATA 141,23,208,10,141,24,208,10
120 DATA 141,25,208,10,141,26,208
130 DATA 76,1,6,169,255,141,252,2,96
```

Just another rambling message about how the mighty have fallen. I used
to really be into 1050s by chance. When Atari was going belly up one
of the local electronic surplus outfits had pallets of busted 1050
drives that I assume were returns that Atari never got around to
fixing for less then $20, I can't remember the price but cheap, I
ended up buying a trunk load, fixing them, and selling them for $20

including shipping. Ah for the good old days when everyone didn't have their hand out looking for you to cross it with a couple of hundred bucks.

Anyway just went to Halted for a walk through, first time in probably 10+ years. Time marches on, they had a rack with boxes of old ICs in anti static tubes. I starts looking through them, 256k and 512k EPROMs, I says to myself "I guess everyone got rid of their UV eraser now that Flash has taken over" I see Dallas clock chips in old style socket, then I come across a tube of 2797 FDC chips. I got confused for a momment, I was thinking back to what they used to sell for and it was like seeing a couple of hundred dollar bills in a cardboard box. Historical note: The 2797/2993 were the FDC used in the 1050 and maybe Rana drives.

Then reality kicked in. I still have a couple of 810s and maybe 4-6 1050s in various states from bone stock to USD. I did hook up my ATR8000 but I have lost interest in things 810 and 1050 other then historical value, one of my 810s is a low serial number 2 board design and the other is an "810 on a plate" so they both stay of course. Likewise I am not interested in getting rid of my 1050s. The point being that I am mostly moved on to other ways of doing it. I have a 720k 3.5" and 1 or two quad density<720k> 5.25" disks attached to my ATR8000.

I still think about an alternative universe kind of things Atari. I think the 2797 supported double sided and I'm pretty sure ~76 tracks for the old DSDD 8" drives. If I have history correct the 1050 wasn't an in house project. In house was the 815 which Atari couldn't get right so Tandon came to the rescue with the 1050 design. It would have never happened because of backwards compatibility issues but the 1050 should have been double sided right out of the starting gate with ability to handle 1 meg formats. The old 1.2 meg 5.25" drives were made to be compatible with the 8" drives so we would have had a plug in 1 meg storage upgrade path.

FWIW: As you may know this came out really late in the 8-bit product
cycle, circa 1989 and was 130XE only if I have it right. I can't
remember the price but I figured B&C may still have a copy so I shot
them off an email. There's a real good chance there were only a couple
of copies sold and those were lost.

If B&C comes through and doesn't ask for a small fortune I'll buy a
copy and see if I can track the author to find his current thoughts
about making it PD or Freeware.

Hello Rick:

I do have a copy of KYAN Pascal if you are looking for it ? I tried
using it but went back to BASIC for anything I could
understand.

Thanks for the offer but I am a bit to old to move to a different
programming environment then I know now. Too many dead brain cells me
thinks.<grin>

 I mostly use Action! if I want structured and assembly if I need
speed with a little bit of BASIC mixed in. I even gave up some of the
good ones like C. Heck, I am still using 'EDIT' from the command
prompt of XP for my assembly language programming editor.

Retrojess has the accurate description for when it bails. Thanks for the conversion to 764=3D$2FC, I used to have two or three programming calculators just for doing that type of thing and binary. I should get one again. The negative is the signed binary math thing. For example in 4 byte integers instead of just representing the numbers 0-4 billion they use the first bit of the number as sign bit so the range is -2 billion to +2 billion. Kind of weak on the topic but for floating point they further divide up the bytes to use some bits for powers of 10 for example. IIRC Wilkinson used 5 bytes for our computers which makes them fairly accurate compared to other computers, they all used 4. Anyway the scheme can be just about anything you chose like first bit sign for the first 3 bytes and the last byte a signed power of 10 to keep it simple for my simple mind, a 2 byte scheme. I'm sure there are more mistakes here but 4am...

First byte is 0 127 means 0 to 127. 128-255 means -1 to -127
Second byte is signed but powers of 10: 10^1 to 10^127 and 10^-1 and 10^-128

So if you had two bytes together 12 and 4 it would be 12X10^4 or 120000
Likewise if you had 141 and 129 it would be -13X10^-1 or -1.3
So just using 2 bytes you could do numbers as big as 127X10^127 and a small as -128X10^-128. Whew that makes my head hurt! Good enough to go from atomic level to light years with 1 part in 127 accuracy.

RE: Rainbow scroll, how many registers do you want to do? Kind of a cute exercise on a couple of levels. For DLI's we have all the waits for the interrupts<7 cycles or something per> but if we just bang on the color registers there is time to do some serious stuffing. In general I think it is a good idea to have some routines like this that can be called from BASIC. Much less 'black box' and available then the 'demo' stuff. I'll knock something out today if I get a chance.

Rick

This is not optimized; stored variables at start of page 6, didn't use
faster page zero or 6502 registers much, it just works. It should show
something for every<gr.0-15> mode since it is tied to scan lines and
doesn't care squat about the screen mode or DLIs. Only rolled 2 color
registers in this but figured I should produce something for now.
Interface to BASIC is about as good as it gets, goes to and turns
control back to BASIC i.e. "DEMO DONE." Some modes may only have
borders scrolls but I don't know for sure. If it is to much of a
memory hog, ~1/2 of page 6, it could be installed and programs chained
or stored in a string and poked from there. Normal restrictions apply
in that any I/O in BASIC >128 bytes(?) will stomp bottom of page 6 and
take the code with it, MAC/65 and DDT trash page 6 too so you have to
use a monitor like Omnimon or an emulator to look at the code in situ.
It may take me a bit to get the .ASM file posted. Things to do, people
to see, social butterfly, that is me!

```

It was stressful, I forgot my 2600 & 7800 cartridges,
I wore a hole in one of my socks, and I'm sore all over.
...but overall, this year's Atari Party was GREAT!

Check out the photos:

  http://www.newbreedsoftware.com/atariparty/2010/photos/

As people give me permission to, I'll be adding more photos,
so if you're really curious about it, check back again in
a week or so.

Enjoy!

Thanks for posting that Russ. Seeing in black and white helped it
register.
Just had to correct myself

```
  *=3D$610
  JMP  $0613 ;should not be here! bonehead on SOOOO many levels.
             ;DOS jsr to first byte but that would have been the
             ;the byte at $600 the way I wrote the original and I
             ;used TASM which doesn't add DOS binary file headers
             ;automatically so you couldn't use DOS anyway and...
             ;the list goes on
             ;I added the *=3D$610 to save face but originally
             ;there was reserved space which would have fooled DOS
anyway
start
  LDY #$01   ;target of X=3DUSR(1555) $613=3D1555 if the useless code is
removed
             ;target becomes $610=3D1552
```

yada yada yada rest is OK but all the variables should be page zero
for speed. For calling from BASIC you can use the all the FP register
space on page zero since they are safe during a usr call.

AND most importantly with the space saved by dropping that useless
code at the start and using page zero memory you could put it on the
bottom of page 1! I have watched the stack pointer and it never drops
lower then ~14 bytes. I even wrote one program that passed something
like 40 parameters via a USR call just to see if the stack could
handle it and no problems. I think there are only a handful of coders
that use it so the only things that would crash it wouldn't normally
be used at the same time. Maybe a debugger or cassette copy program.

If it gets moved to the bottom of stack i.e. *=3D$100 and variables get
moved to page zero i.e. STY $D4 vs. STY $600. The code goes Steve
Austin: faster, stronger, better.

Kind of busy for the next day or three but I may revisit this.

Rick

Back in 1996 I put together a little "Star Raiders" tribute
web page (which currently lives here:
http://www.sonic.net/~nbs/star-raiders/)

Thanks to that, a kind fellow emailed me yesterday to ask
me if I knew about Doug Neubauer's website, where he has
posted some trivia about Star Raiders (did you know
"What's Wrong?" was a nod to THX-1138?), and stories about
designing POKEY, working at Atari, and other topics.

I hadn't seen it mentioned before (that I can recall),
so happily added links to his articles from my SR page,
and figured I'd share the links here, too! :)

  http://dougneubauer.com/starraiders/
  http://dougneubauer.com/ataripokey/
  http://dougneubauer.com/atari/
  http://dougneubauer.com/atarisolarismanual/

Enjoy!

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, and 800XE personal/home computers, and the Atari XE video game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from 1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

Today, the Atari computer intellectual property rights, along with the home market rights to the Atari trademark itself, are owned by Atari Interactive, Inc., a subsidiary of Atari, SA of Lyon, France.

NEWSGROUP BACKGROUND
comp.sys.atari.8bit was created in November 1986 (as part of the Great Renaming) as a direct replacement for: net.micro.atari8

comp.sys.atari.8bit is unmoderated, and has no formal newsgroup charter.

The comp.* hierarchy of Usenet newsgroups is managed by the Big-8 Management Board: http://www.big-8.org/

RELATED USENET NEWSGROUPS
  alt.binaries.comp.atari8bit
    Programs for Atari's 6502-based orphans.

  comp.sys.atari.advocacy
    Attacking and defending Atari computers.

  comp.sys.atari.announce
    Atari related hard/software announcements. (Moderated)
    Moderator: Kevin Savetz
    comp.sys.atari.announce web page: http://www.atariarchives.org/csaa/

  comp.sys.atari.programmer
    Programming on the Atari computer.

A new emulator for Atari xl/xe:

http://www.virtualdub.org/altirra.html

A new SIO2PC/APE Front end for holding atr's:

http://sourceforge.net/projects/aspeqt/

Two really good fairly new projects for the Atari Hobbyist.

Regards,

RoyE

Friends!

I'm proud to announce the 2010 edition of the Nordic Atari Show (NAS)!
The event takes place June 11-13 in Falk=F6ping, Sweden (about an hour
from Gothenburg by train).

NAS is an annual get-together organized by the Swedish Atari Club
(SAK). It's a simple, improvised event; the idea is to hang out, eat
pizza, and fool around with our beloved Atari machines. The essence of
NAS is its visitors and what they choose to do with it.

Traditionally NAS is an Atari event, but other (retro) platforms are
welcome as well. However, if you're 14 years old and wish to play
Counter Strike with your friends, please go somewhere else

For more information, take a trip to: http://www.sak.nu/index.php?ucat=3D15=
&sta
... index=3Dtrue

Trying to keep score. Still haven't got my Needem PB10 EPROM
programmer running. I did find some software that runs under DOS. Kind
of academic since my custom OS and a bunch of other stuff was all on
hard drives that went for a swim. Still, it will give me a chance to
do some of the stuff that makes life a little easier like burn an
EPROM with fast floating points routines, change left margin start up
to zero, change default colors, maybe burn another OMNIMON if the ones
in my 800xl and 1200xl are gone baby gone.

I've spent maybe 100 hours trying to get a copy of my playfield/FONT
editor off a busted hard drive to work. Today I was putting some stuff
away in a dresser and of all things I find a 3.5" floppy case about
the size of a pack of cigarettes in the under some sweat pants! The
label on one disk said it had SCREDIT on it. I didn't want to risk
that disk so I stuck one in my 3.5" equiped ATR8000. I forgot how much
clicking and grinding SDX does with an ATR8000. NAKs, groans, click
head load, click head load, NAK, groans, then it starts chugging. Hey
great! A directory and I recognize some of the files. One was a load
and go graphic demo I wrote for a friend with kids. I give it a go and
after the start up grunts it loads two sectors<24k file!> and bails
out with an error. No big deal because all the files I need to rebuild
it are still there. I pull the disk out, slide the window back, and
see a huge gash on the top side of the disk. The disk is labels 360k
but I don't know how I arrived at that. I may have done it as a double
sided 40 track drive or single sided 80 track drive. Glad I didn't put
in the disk with SCREDIT in it.

80:20 it was scratched by crud:the media had turned to powder. If the
media has gone it would have scored top and bottom. I took the drive
appart and it looked like it had more dust bunnies inside it then a
bed has under it. I cleaned the heads with IPA but it is going to take
some serious dust busting.

I bought a new copy of Digital Research DOS off eBay. I was thinking
try 22disk, anadisk, and DEANA. Turns out Sydex has changed hands and
they have been pulled from the PD. $100 now. IIRC DEANA was Preston
Crow's but the status of the Sydex products kind of pulls the rug out
from under it. The only good thing about that pursuit was I found ref
for a Samsung drive that will emulate an 8" drive.
http://www.techtravels.org/amiga/SAMSUNG-SFD321B-070103.pdf
Not a huge thing but MyDOS and ATR8000 support 77 track DSDD 8" drives
so it could move me from 720k to 1 meg. Taking inventory on my ATR8000
drives I think I have 1 360k DSDD 5.25" disk as drive one so I could
boot protected software, 720k 3.5", a QDDD 720k 5.25" <got that one

out of a Televideo or something>, and something that constantly causes me grief, a 360k/720k switchable 5.25" disk. QD are just 80 track 5.25" drives but they have narrower heads. The one I modified just made it double step so it looks like a 40 track drive to software. Problem is I keep forgeting the switch settings and writing a real 360k drive floppy in a narrow head QD drive. I screws up the disks on a pretty regular basis that way. I really have to stop using magnetic media. Bought myself a bargan bin 512 meg SD card. Looking at the specs I would say it could be driven from a joystick port like the old Corvus HDs. It would be about $145 cheaper the the other solutions but I don't know when I will find the time to work on it. Maybe if I didn't make all these long winded posts!

On that first disk I scarred I saw I had one of my gr15 to gr12 converters on it. I also had a program that would try to fit a gr15 screen into a single FONT. It would wade through the screen from top to bottom seeing if it had already defined a character if not it would add a new one. I'd like to retrieve that too as I had a Mickey Mouse graphics 0 character set that with artifacting was most excellent IMNSHO.

Past midnight, tired from going to the beach to spend some time with two of my grand daughters today. Life is good. 'night all.

Rick

Very cool! It's good to hear Doug Neubauer has a presence on the Web. I
enjoyed reading what he had to say about his projects and his involvement
with Atari. Thank you for posting the links!

Mydos and SpartaDOS format 128/256 bytes per sector.. I notice ASPE QT or
Altirra offers 512 bytes formatted disk. So what DOS can format 512 bytes ?

```

I see you're busy. Please check your e-mail, I guess the one used here is a spam bucket.
The numbers (06XX) just come from DEBUGPL but edited to remove hex numbers.

This is neat! Could you make one that can be ran from basic and not exit back to DOS..
I compiled and ran this with MyDOS using basic to load xio 40, etc.. but it dumps me back to dos. I would like to try it out with Turbo basic also..

RoyE

I would like to convert all my old 5 1/2" disks to disk images that I
can use with an emulator on my Mac. I still have my old 5 1/2" Atari
disk drive, and I'm wondering if I can buy an adaptor so I can connect
it to a USB port.

Years ago, I bought such an adaptor, but it was for some kind of
archaic PC port that you could only find on really old PC's. I no
longer have access to such a PC, and I was hoping that instead of
trying to find an old PC, I could find an adaptor that goes to USB
(along with some Mac software to make the images)

Thanks,
-Jeremy

If you don't find what you need, drop me a line. Send me your floppies and
an SD card, and I can send the SD card back to you full of ATR disk copies.

To email me, reverse each part of my public email address...

If you don't take James up on his generous offer, can you tell exactly
what equipment your current PC is has? It sounds to me like you either
had and old Xformer printer cable or an SIO2PC type device and no
longer have a PC with serial ports.

IF you have a PC with serial ports and a working 8 bit system you
can use a SIO2PC or APE. Building one yourself is cheap, <$6 if you
have a spare Atari Cable or build it inside your computer.

If you just have a 1050 w/o a working 8 bit then you have to use
something like an APE Prosystem cable.

The latest incarnations use USB vs. RS232. This option if you don't
have serial ports on your PC and want to do it yourself is probably
best. They cost ~$40 on eBay but work in every mode you could need.

Rick

I did not know this, but I guess I shouldn't be surprised. I'm
finally 'without serial ports' (well, except my wife's older laptop
I suppose), but I'm also SIO2SD-enabled, so in terms of _booting_
my Ataris, I've got an excellent (and portable) solution.

In terms of backing up my disks, I need to go 1050 -> Atari -> SIO2SD,
which is honestly kind of a pain. I'd love to be able to just
hook my 1050 up to my Linux laptop and hit "go" to back it all up.
Meh. :^(

Jeremy,
Slor's offer would be the cheapest and probably best.
I bet that many of your 5 1/2" floppies are copy protected, which
makes copying harder, near impossible.
Bill Kendrick is probably most familiar with non-PC software and
adapters, but I'm pretty sure
there is no Atari to MAC interface like we have for PCs, the archaic
serial port ones, there are (again for PC)
USB adapters and software now.
There is one thing that you can do with your Mac, and I'm not sure how
good it is, is the 'Rainbow' Atari
emulator for the Mac. It is old, but I think there's a OS X version.
http://www.bannister.org/software/rainbow.htm
If 'Rainbow' is like PC Atari8 emulators, the .ATR disk images will
work to run the games on the Mac.
I don't know a Mac person that is into Atari8 options.
You'd need to be familiar with the Atari8 in order to use .ATRs.

For Mac to Atari emulation
Try this link:

http://www.atarimac.com/sio2osx.php

other info on this page tells about the requirement for a special USB to
SERIAL dongle for use with the SIO2PC USB cable at www.atarimax.com .

Registration seems to be required to use atarimac osx software for longer
periods..

I'm guessing Atari800 should also work fine on Mac (since it has a
libSDL target, and SDL is well-supported on OS X).

Does your laptop have a PCMCIA/Cardbus or an ExpressCard slot?
If yes, you could buy a 16550 (or even better a 16C950) card for
some 15-30 USD and use your old serial SIO2PC and/or 1050-2-PC
interfaces.

> I'd love to be able to just
> hook my 1050 up to my Linux laptop and hit "go" to back it all up.

Last year I enhanced AtariSIO so that atarixfer supports several
highspeed SIO modes (yes, I also had to transfer a batch of disks
from my 1050 to my Linux box :-). A standard 16550 card supports
Happy Warp and XF551 2xSIO, with a 16C950 card atarixfer also runs
with Happy Ultra Speed, 1050 Speedy and 1050 Turbo at approx. 3xSIO.

ATM it looks like AtariSIO will stay serial port only for quite a while.
AspeQt also works fine with FTDI based USB-RS232 adapters, but
currently AspeQt is still missing support for 1050-2-PC interfaces.
But, just drop the author of AspeQt a line, maybe he'll add support
for 1050-2-PC :-)

so long,

Hias

Hias, Did you ever get the Indus GT hi-speed mode working? You and I
exchanged some e-mail about it last year. I never did have any luck.

FYI: There's a new gadget available called an 'FDC-5025' that adapts a PC high-density 5.25" drive to USB. The board carries a little microcontroller that directly interprets flux transitions like a poor-man's Catweasel. He makes the API available if you want to add formats. It's read-only at the present time and can handle standard Atari 1050, Apple 2, Commodore 64, TI-99 and Northstar hard-sectored formats out of the box. Software sources supplied and can target Windows, Linux (even my 64-bit system) and MacOSX.

http://www.deviceside.com/fc5025.html

I've found it very handy.

Steve

Yes, I remember. But so far I haven't been able to get access to an Indus
drive to do some tests by myself. If those damned drives would be a little
bit cheaper you could be sure I'd already own one :-)

I'll keep trying to get access to one (at least for some time), and I
hope I can do the tests and finish the work.

Thanks to everyone for your replies. Steve, the device you mentioned looks like exactly what I need. I can use this to connect my Atari disk drive to my Mac and make .atr images from my disks, right? I went to the page and it looks like it's what I need, though I couldn't find any pricing info, or how to buy it.

To answer some of your questions: My disks are not copy protected. These are disks of files I made myself: programs written in Basic, and word processor files mostly. I have the 5 1/2" disk drive that came with my atari 800XL, but not the actual computer. And I do have an SIO2PC cable that I bought years ago, and I was able to use this to convert some of my old disks on my friend's PC. But I don't have access to that computer anymore, and newer PC's don't seem to have that kind of port. And anyway, I only own a Mac. I have heard that now there are SIO2PC cables that are USB, but the software is only for PC. But I was thinking that I could use VirtualPC, since it's usually pretty good about USB port emulation.

But anyway, it seems like the device Steve mentioned would be better, and I wouldn't need to use Virtual PC. Now I just need to figure out how to buy it...

Thanks again,
-Jeremy

I haven't yet, but I have done Apple II disks. Works great.

If I can get into my Atari stuff, then I can try one. I have my
FC5025 set up and running. Just a matter of pulling out a disk.

End quote.

I think you can't hook your 1050 to the device. It is for a PC type
5.25" drive, and you have to supply
the power to the drive yourself, like from a removed PC power supply.
So, you'd have to buy
a 5.25" PC drive, the adapter.
The device will read your disks OK, just there's no way to connect
your 1050 to it.

I'm a bit confused. You plug it into an old PC 5.25" drive (via the ribbon
cable), or what? (I'm imagining old-drive --ribbon--> device --usb--> PC)

Has anyone got photos of it actually plugged into a disk drive?
Man, where does one GET old 5.25" PC drives? (I've _never_ owned one.
My first PC was a PS/2 with a 720K 3.5" drive.)

> Sent from my computer

I still have more then a few real 5.25" laying around but most are in
goofy stuff like an external 2 floppy drive housing with the old 37
pin cable, a CP/M computer built into something about the same size,
and a H89. The H89 used hard sectored disk so it probably isn't a good

candidate for a donor.

For that matter I found a couple of 8" drives in my attic. Two<?> are
still in a ~DEC PDT/11. I think people must be using them for
Volkswagon turbo chargers or something since they seem to be selling
for multiples of $100s. Fifteen years ago I left off at building a
cable ATR8000 =3D> 8" drive but didn't get to finish. All I had left to
do was build a 24V power supply for the stepper<???> when I got in a
relationship! Damn women.<grin>

Too old and too late methinks. I've been doing alot of reading trying
to come back up to speed so I end up doing a lot of "could'a should'a
would'a" Read where a guy trashed five Atari 520ST just because he
wanted the 1772 FDC chip. I still fight the urge to bit bang a FDC on
the Atari buss. IIRC all of our data is inverted so you can't just
hook up a FDC in the memory map unless you want a one of a kind that's
incompatible with everything else. I think I will crawl around the
attic some more tonight.

Jack, if you mean Atari 8 bit then one would be the Floppy Board from
Bob Puff. There were also a programs to transfer files MS DOS 512 byte/
sector files on a 1050 Happy drive and a modified XF551. I'm not
familiar with all the after market drives out of Europe but it
wouldn't suprise me if there were a few more. I don't think there was
a DOS at the time that supported them in 512 byte sector mode.

The WD1772 was used in the ST with 512 byte sectors and in the XF551
with 256 byte sectors. It is more of a software problem then chips.

I notice that software mentioned at thelink specifies 'Atari 810'.
Where does that leave Dos 2.5/3.0 1050 enhanced density and
disks made on any of various true double density hardware?

I believe the 810 mentioned just means that the device, hooked up to a
PC 5.25" floppy and powered, would
be able to read the single density floppies, you don't hook a 810 up
to the device.
I believe there would be a problem with the device reading Atari
single density, many PC floppy drives
are dbl. and high density. I don't think the device would be able to
read single density Atari disks, which
is the whole point of what is being tried done here.
Also, the original poster is thinking of using a virtual PC on his

Mac, and a USB to SIO/1050 adapter, like
AtariMax sells. I don't think that will work either, as in PC land,
it would need a proper driver to
do the job and I don't think the AtariMax APE software, or Pro
software, works with a 1050 to PC
device, as the OP wants to just hook his 1050 up to his Mac and read
in the files to .ATRs.
Don't think it will work.
I still think James' offer to read the disks and put the files on a SD
card would achieve the desired.
Of course, there may be privacy concerns. A USB flash drive might be
better.

That is correct.

That is not correct. Issues with single-density 'FM' recording mostly stem from the clone floppy controller chips on PeeCee motherboards. The FDC-5025 adapter uses an Atmel microcontroller to directly extract flux transitions from the disk. It neither knows nor cares about single-density vs. double-density vs. high-density. The limiting factor is sample rate, and the unit is capable of reading "modern" HD 1.2M diskettes - lower (e.g. ATR 810) is not an issue and it does just fine with them.

It leaves you writing your own driver :-). The API specs are shipped on a CD with the product. I have not delved into it very deeply, but it appears to be orders-of-magnitude simpler than writing Catweasel drivers (not for the faint-of-heart).

Your imagination is quite accurate!

> Has anyone got photos of it actually plugged into a disk drive?
> Man, where does one GET old 5.25" PC drives? (I've _never_ owned one.
> My first PC was a PS/2 with a 720K 3.5" drive.)

Packrats like me have drawers full of them. Otherwise, try eBay or a local
hamfest. Since everyone has gone nuts with Reduce, Re-use, Recycle, hundreds
of thousands of these have disappeared into the crusher or, more likely, scrap
heaps in rural China. Blink and it's obsolete!

A photo is not very interesting, although I have mine mounted in the case from
a mid-90s Apple CD-300e CD-ROM drive. Same form-factor.

Okay, I'm getting a lot of different info here, which I very much
appreciate, but I'm a little overwhelmed. So let me just get this
straight: If I buy the "FC5025 USB 5.25 floppy controller" that Steve
mentioned, and I buy a PC floppy drive, then will I or won't I be able
to convert my Atari 800XL disks on my Mac?

It looks like there's some dissent here, so maybe I'll try asking the
seller of the item.

Thanks again,
-Jeremy

You will be able to convert "standard" single-density Atari diskettes on your Mac. Best to look for the recommended Teac disk drive he mentions on the product website. Some basic familiarity with computer hardware is assumed, to the extent that you'll need to locate and possibly change a few jumper settings on the floppy drive. You will also need to arrange for power to the drive and a safe means to have everything hooked up and usable without shorting the USB adapter against anything else (it's just a bare circuit board).

If you're not comfortable with any of that, you may want to look at other solutions.

> It looks like there's some dissent here, so maybe I'll try asking the
> seller of the item.

I own one of these. It works. I can read Atari 810 format diskettes (90kB) with it. You cannot read the newer double-density (actually sort of 1.5 density diskettes) unless you want to write your own driver. I'm sure Adam (the designer) will confirm all this if you drop him a note.

The Mac OSX software is provided on the CD-ROM, but I have not used it since I spend all my time on a Linux platform.

Steve

Something like this, right?

  http://www.overstock.com/Electronics/StarTech.com-1-port-16C950-UART-ExpressCard-34-Serial-Adapter/4240815/product.html

(It's $55 USD at that site, at least)

> with Happy Ultra Speed, 1050 Speedy and 1050 Turbo at approx. 3xSIO.

Cool.

I'm not sure, though, is it worth it for me to spend $55 on a device
that lets me do SIO2PC when I can simply do:

```
  Atari  <-SIO->  1050  <-SIO->  SIO2SD
                    |              |
                 Floppy           SD
```

Or is it _really_ worth doing it this way?

```
  Linux  <-serial->  SIO2PC  <-SIO->  1050
    |
   HDD
```

Keeping in mind that I have one of these:
  http://www.atarimax.com/sio2pc/documentation/index.html

The docs to the 080714 (0.30-pre3) of your AtariSIO that I have
sitting here says:

  atarixfer is used to read/write disk images from/to a Atari drive
  connected to your Linux box with an 1050-2-PC cable. An APE
  ProSystem cable will also work, but you have to add the
  command-line switch "-p".

So I should be good, with the "-p" option? :)
And when's the next release of AtariSIO? The latest version
I see posted (0.30-pre2 from 2004-08-31) is older than the one I have!

This is the right place to find it still, right?
  http://www.horus.com/~hias/atari/#atarisio

Thanks! (Still kind of fuzzy on all the possibilities & (in)compatibilities
out here ;))

Well, the original poster was asking about adventure _creation_ software. :) But yeah, there were Ultimas for the Atari 8-bit.

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, and 800XE personal/home computers, and the Atari XE video game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from 1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

Today, the Atari computer intellectual property rights, along with the home market rights to the Atari trademark itself, are owned by Atari Interactive, Inc., a subsidiary of Atari, SA of Lyon, France.

Hi all!

Last March I organized an event in Davis, Calif. that I called "Atari Party."
We had over a dozen Atari systems, spanning Atari 2600 through Jaguar, and
over 200 games for the public to come and play:

  http://www.newbreedsoftware.com/atariparty/2009/

I haven't picked a date (or venue -- the public library in town, where
we met last year, is undergoing renovation thru mid-2010), but I've
started planning.

This year I'm thinking of bringing my Sony PlayStation 2, along with
a variety of PSX and PS2 discs I've got that contain Atari games
(e.g., "Activisiton Anthology", "Midway's ... Atari Collection 1")

Would anyone out here be interested in bringing systems & games
this year?

I've personally got 10 systems (including 2 non-Atari devices for
which I've got emulated Atari games: the PS2 and Gameboy Advance),
and 2-3 too few monitors/TVs to display them on. ;)

I've also got about 390 games (about 50 of which are dups; e.g, I have
a Combat cartridge, and my Flashback 2 has Combat).

Sorry if I'm incoherent, it's late and I'm distracted by a movie. ;)

I have it on one of my Falcons and ran it a few times, but didn't
get into it that much as I was working on other stuff.

Two part explanation: 1st I am trying to get Atari Active again. I
went through a comical attempt to retrieve some of my old programming
data. Looks like everything I had stored on three 20 meg hard drives
has gone into the ozone. Went to the extent of formatting an old
original IBM 10 meg drive just to make sure everything was working.
Haven't checked my floppies but I am sure they have all gone south due
to storage in a damp basement. Don't cry for me Ataritina! Virtually
all of my old stuff was singularly unpopular even with me and I wrote
it. Lots of joystick home control, character set editors, and RS232
type stuff.

I did manage to pick some stuff off an old Syquest SCSI drive which is
the 2nd part. My memory is not perfect in that if something registers
at the time and I say to myself =91I=92d better remember that=92 it gets

committed to memory. The converse is when I decide it isn=92t important enough to waste any brain cells on. I forget all the simple stuff like where I put my car keys or what I had for lunch. Apparently I backed up what I could of a failing hard drive to the Syquest. About the only thing even remotely of interest was the source code for an Action! move routine that is up on umich archive. Foggy because I remember something along the lines of Bill Kendrick being involved like he found the problem with the PD routine being slow or I noticed one of his programs was slower then when run from cart or ??? Looking through the source and output files I=92d say everything on the hard drive was broken except one TASM output file. As is my habit I commented the hell out of the orignal. I guess my amazement could have come from everyone using Zaks memory move instead of Levanthal/Levine. I still have the books but don't feel like looking it up. Since it is faster then the built in Action! routines, it makes it seem a little to bright for me. If I did figure out that odd/even double move independently then I am at least half bright. Anyway google does a better job of backing up posts then I do backing up hard drives so I don't lose it again...

```
0001   0000             ;
0002   0000             ;Quick & dirty quick move left. Make sure the
Dest and Source do
0003   0000             ;not overlap. It may still work depending on
the number of bytes
0004   0000             ;moved or if the Source is higher then Dest,
but don't take it
0005   0000             ;for granted.
0006   0000             ;
0007   0000             ;Written by Rick Cortese 6/18/96using the
Speech Technologies TASM
0008   0000             ;assembler for MS DOS. Basic standard core
routine from
0009   0000             ;Assembly Language Subroutines by Leventhal,
Levine.
0010   0000             ;
0011   0000             ;Calling convention from Action, Move(Source,
Destination, Size)
0012   0000             ;This should place the Source pointer at $A0,
Destination at $A2, &
0013   0000             ;Size at $A4. *NOTE* The Action manual is just
plain wrong on this.
0014   0000             ;For passing more then 24 bits of parameters,
the compiler calls a
0015   0000             ;routine to copy them to page zero. Near as I
can tell, it uses
0016   0000             ;the X register as an index & *FAILS* to
restore it! A & Y are intact,
0017   0000             ;& mirrored at $A0 & $A2, but you *MUST* LDX
$A1 if you want it to
0018   0000             ;have the proper value as described in the
manual.
0019   0000             ;
```

```
0020   0000             ;get some stuff defined
0021   0000             Source  =3D$A0
0022   0000             Dest    =3D$A2
0023   0000             Size    =3D$A4
0024   0000             ;
0025   0000             ;It will be relocatable, but have to start it
somewhere for the
0026   0000             ;assembler. $680 is good since people with MAC/
65 can test it.
0027   0000             ;
0028   0680                     *=3D$680
0029   0680             start
0030   0680             ;
0031   0680             ;If its less then 256 bytes, go straight to
clean up routine
0032   0680             ;
0033   0680 A0 00               ldy #0
0034   0682 A6 A5               ldx Size+1
0035   0684 F0 13               beq part
0036   0686             ;
0037   0686             ;Something that should have been obvious to
everyone looking for
0038   0686             ;speed, but I've never seen it used in any
general purpose routine:
0039   0686             ;A PAGE IS 256 BYTES! Once you decide this,
you could have 256
0040   0686             ;       lda (Source),y
0041   0686             ;       sta (Dest),y
0042   0686             ;       iny
0043   0686             ;sequences with no branching! Since 256 is an
even number & to keep the
0044   0686             ;code a bit smaller but not much slower, an
even number of sequences with
0045   0686             ;a single branch at the end will invariably
hit a zero at the last
0046   0686             ;iny in the sequence!
0047   0686             ;
0048   0686             page_move
0049   0686 B1 A0               lda (Source),y
0050   0688 91 A2               sta (Dest),y
0051   068A C8                  iny
0052   068B B1 A0               lda (Source),y
0053   068D 91 A2               sta (Dest),y
0054   068F C8                  iny
0055   0690 D0 F4               bne page_move
0056   0692 E6 A1               inc Source+1
0057   0694 E6 A3               inc Dest+1
0058   0696 CA                  dex
0059   0697 D0 ED               bne page_move
0060   0699             part
0061   0699 A6 A4               ldx Size
0062   069B F0 14               beq exit
0063   069D             ;
```

```
0064   069D             ;ok, here's where another leap in logic takes
place. You just found out
0065   069D             ;the remainder is not equal to zero to get
here. The only other values
0066   069D             ;it could be are 1-255. Now how do you get a
multiple sequence like
0067   069D             ;above to work? Easy, just test bit zero! If
bit zero =3D0 then you have
0068   069D             ;at least 2 bytes to move so the mutiple
sequence move above works. If
0069   069D             ;bit zero does not equal 1, then you either
have a single byte to move
0070   069D             ;or an odd number of bytes. By jumping to the
middle of the routine,
0071   069D             ;you now have either moved the single byte or
converted the odd number
0072   069D             ;of bytes remaining to an even number suitable
for the routine.
0073   069D             ;
0074   069D A5 A4               lda Size
0075   069F 29 01               and #1
0076   06A1 D0 06               bne magic
0077   06A3             last
0078   06A3 B1 A0               lda (Source),y
0079   06A5 91 A2               sta (Dest),y
0080   06A7 C8                  iny
0081   06A8 CA                  dex
0082   06A9             magic
0083   06A9 B1 A0               lda (Source),y
0084   06AB 91 A2               sta (Dest),y
0085   06AD C8                  iny
0086   06AE CA                  dex
0087   06AF D0 F2               bne last
0088   06B1             exit
0089   06B1             ;
0090   06B1             ;Stick a:
0091   06B1             ;       rts
0092   06B1             ;here if you want to call this as a
subroutine. The RETRUN in an
0093   06B1             ;Action program generates a rts & is needed
after the code block
0094   06B1             ;below to keep the compiler from getting
confused.
0095   06B1             ;
0096   06B1                     .end
0097   06B1             ;
0098   06B1             ;In my tests, I found this to be about 10-12%
faster then the Action
0099   06B1             ;built in routine. I've never seen this
particular method done in
0100   06B1             ;a general purpose routine before, but then I
admit I haven't
0101   06B1             ;seen everything ever written for the 6502. I
```

```
did read every Antic,
0102   06B1             ;Compute, & about 1/2 the ANALOG magazines
between 1984 & the time
0103   06B1             ;when they disappeared & never saw a routine
like it.
0104   06B1             ;You could shave a few more tics off a move by
using the
0105   06B1             ;       lda address,x
0106   06B1             ;       ...
0107   06B1             ;method, but then the move would have to be
hard coded or self
0108   06B1             ;modifying. In the later case, the
modification process may take
0109   06B1             ;up more time then is saved by the routine.
0110   06B1             ;It seems you can teach an old dog new tricks.
0111   06B1             ;The code block to include in your Action
program is:
0112   06B1             ;
0113   06B1             ;PROC Move(CARD Source, Dest, Size)
0114   06B1             ;
[$A0$00$A6$A5$F0$13$B1$A0$91$A2$C8$B1$A0$91$A2$C8
0115   06B1             ; $D0$F4$E6$A1$E6$A3$CA$D0$ED
$A6$A4$F0$14$A5$A4$29
0116   06B1             ; $01$D0$06$B1$A0$91$A2$C8$CA$B1$A0$91$A2$C8$CA
$D0
0117   06B1             ; $F2] RETURN
0118   06B1             ;

FYI - Plans for Atari Party 2010 move ahead!

(1) We'll be screening a movie (if not two!).
    So far, the documentary "Once Upon Atari".

    http://www.newbreedsoftware.com/atariparty/2010/movies/

(2) We'll be having a raffle, with some prizes donated to the event
    by corporate sponsors:
      * O'Reilly Media (gaming & retrogaming books)

```
      * ThinkGeek  ($100 gift certificates)
      * Legacy Engineering  (some USB Atari CX-40-style joysticks)

    http://www.newbreedsoftware.com/atariparty/2010/sponsors/

(3) I whipped together a cute (I think!) piece of flyer artwork
    for this year's party, using a collage of photos from last year
    (in the late-1970s Atari 2600 game box art style):

    http://www.newbreedsoftware.com/atariparty/oldstyle-web.png

(4) There are a pair of mailing lists you can subscribe to;

    one (moderated) for news & announcements:
      http://lists.sonic.net/mailman/listinfo/atariparty-news

    the other (discussion list) for volunteer coordination & fretting:
      http://lists.sonic.net/mailman/listinfo/atariparty

(5) And for the mailinglist-phobic, I've created a Facebook group:

    http://www.facebook.com/group.php?gid=280573563703

I fell in love with the net and all the compuiter teahcnology in the very early years and have loved it ever since, I have an IT Degree and Communications degree and will be working on my doctorate for the next five years, in bwetween I design websites, databases, Multimedia Produxction or anything that wil make me a penny, just student scraping by. But Guess what? I don't want your money, your e-mail, or anything. Each of these sites has a specific topic but they have them style and layout sothey are easy to navigate and ther a search function should take you to exactly where youwant to, or just explore, they have outside service you can acccess as well. Each site has 10,000 plus articles and they are updated everyday so you know you are gettin up to date information. ENough, here the computer and tech related sites.

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, and 800XE personal/home computers, and the Atari XE video game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from 1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

Today, the Atari computer intellectual property rights, along with the

home market rights to the Atari trademark itself, are owned by
Atari Interactive, Inc., a subsidiary of Atari, SA of Lyon, France.

Atari video game aficionados from near and far will host the second
annual Atari Party in Davis, California on Sunday, March 14th.

Atari Party invites the whole family to a day of games, prizes, and even
a little bit of learning. Test your skill with 300 video games on 30
game systems dating as far back as 1975, plus get a chance to win prizes
in a free raffle, and learn about the golden age of Atari with a
screening of the documentary film "Once Upon Atari."

Admission is free. Raffle prizes include USB joysticks, books, and
ThinkGeek gift certificates.

Atari Party is March 14th from 12pm to 8pm at the Redwood Park Community
Building, 1001 Anderson Road. For more information, visit:

Hello Atari users. I was wondering if somebody can help me with my
800XL keyboard. the "-" key acts as it is stuck, and displays a bunch
of ------------ on my screen. It isn't stuck, then key moves up and
down like the rest of the keys do, so it isn't the springs.

Any Help?

Subject: Introduction

Conventions

All commercial vendors, developers, publishers, and repair shops should be listed here. "Active" PD/freeware/shareware developers should also be listed. Persons or entities holding rights to products, but not selling or supporting them in any way, should NOT be listed here.

"Vendor" = Reseller of products produced by others. Types of products sold are given in categories: new hardware, used hardware, PD/freeware/ shareware, (new) commercial software, used (commercial) software.

"Developer" = Producer of products. Titles of products produced by the developer are listed. No prices are given.

"Publisher" = Publishes a print or disk magazine, or a book. Complete subscription or ordering information should be given, including prices. Authorized online publishers of originally print or disk magazines are also listed. Online books are not listed.

"Repair Shop" = Can repair 8-bit Atari or related hardware devices. Be sure to make advance contact before sending anything to work on!

Entries are presented alphabetically by company name, or publication title. If no company name exists, a personal name is used. "See" references indicate complete information may be found under the given heading. "See also" references indicate closely-related information may be found under the given heading.

The month/year that vendor information was most recently fully verified is given at the "upper-right" of each entry.

Every entry should contain a valid postal address or web page address.

Unless explicitly requested by the vendor, no entries will include an email address due to the overwhelming amount of spam that would result.

The following is from http://www.upu.int/irc/en/ (2004.03.27)

When one writes to a stranger and requests a reply, it is considered polite to enclose a self-addressed stamped envelope. This works well when both persons live in the same country. However, if they are from different countries, the enclosed postage stamp will not be valid.

This technical problem was solved in 1906 when the Universal Postal Union, during its Congress in Rome, introduced the International Reply Coupon service. International Reply Coupons (IRC) are exchangeable in all member countries for the minimum postage of a priority item or an unregistered airmail letter sent to a foreign country.

The UPU's International Bureau processes approximately six million coupons each year and takes care of all accounting aspects. Developed countries are the largest users. The International Bureau does not sell ICRs directly to customers; they must buy them from their local post office. Although they are not obliged to sell ICRs, it is mandatory for all Posts of the UPU member countries to exchange the coupons.

Verfications -> YOU!

This list is in a constant state of development, and comes with no guarantees. Information of this nature constantly ages; therefore, the information contained in this list is constantly updated. Please use the latest release of this list whenever possible!

Remember, the success of this list is dependent on YOU, the reader, to send me updates that correct errors that you find. If you use this list, please do your part in keeping it useful for everyone!

Cassville WI 53806-9733
USA
Phone: 608-725-2137
http://www.8bitclassics.com/
Vendor: new and used hardware and commercial software

A-ONE Online Magazine 2/07
See: Dana P. Jacobson

ABBUC HAR -- Hannoverschen ABBUC Regionalgruppe 2/07
Hanover
Germany
http://www.bertelmann.org/har/
Vendor: XF351 Upgrade-Kit includes Floppy + Cable + EPROM + Bootdisc, Used Atari 800 XL PAL, Speedy1050 TDS. Not all items online available--Ask for more information. Additionally vendor of:
- all items from Frank Heuser Shop
- all items from Wolfram Fischer
Special lower prices for ABBUC members available.

ABBUC Regionalgruppe Frankfurt / Main (RAF) 5/07
Dillenburgerstrabe 61
60439 Frankfurt / Main
Germany
http://www.abbuc-raf.de/
Vendor: MultiJoy8 cable and adapter
Developer: SIO2PC, Network Interface, 2 computer interface (automatic 2 computer switch for use the same peripherie), Schaltnetzteil (Power supply), 8 channel digital voltmeter, SIO2USB

Advantage Web Solutions & Computer Services (Jim Mason) 7/04
PO Box 561
Mason City IA 50402-0561

USA
http://www.jamess.com/
  Developer: The Atari Weather Station -- build your own dedicated temperature monitoring station using simple thermisters and the provided software. Also available: source code listing, temperature data aggregation utility

Alhart Enterprises Presents (AEP) 8/06
c/o Paul V. Alhart
524 N Z St
Lompoc CA 93436-5019
USA
tel: (805) 736-4624
"encoded" email: OOOp.alhartOOO@OOOverizonOOO.OOOnetOOO
  Vendor: used hardware--mainly reconditioned disk drives: 810 (no case), 810 w/case, 810 w/Archiver, 1050, Rana 1000, 1050 w/doubler, Indus GT
  Developer: AtariWriter+ Companion (disk), AtariWriter+ Companion II (disk), StarStuffer (disk), Search System II (disk), Atari BASIC Enhancements (disk), 8-bit TTL Logic Analyzer (disk), MagicCalc (disk), Games disk: Jacks Cargoship + Light Pen/(Light Gun) Tic-Tac-Toe (disk).
  Publisher: RANA Repair Guide (book) - US$12
  Repair shop: Atari disk drives

Altronic E.I.R.L. 6/04
Bolognesi 952
Bellavista
Callao 2
Peru
tel: (51)(1) 429-4298
  Repair Shop.

Alltronics 8/05
PO Box 730
Morgan Hill CA 95038-0730
USA
Phone: 408.778.3868 Hours: 10am to 4pm Monday - Friday
Fax: 408.779.2608
http://www.alltronics.com/
  Vendor: Atari CX85 Numerical Keypad, Blaster! Auto Fire Module, TV/Computer Switch

Ambery 9/08
12335 Denholm Dr Ste E
El Monte CA 91732-3654
USA
tel: 626-350-8956 or 626-698-6739 Mon ~ Fri (10:00AM to 4:00PM PST)
FAX: 626-771-0060
http://www.ambery.com/
  Developer: various Video to VGA/RGBHV converter scalers, see http://www.ambery.com/vitovgcosc.html. Connect your Atari to your PC monitor!

Art Transfair Berlin (Andre Motzkus) 2/07
Brunsbuetteler Damm 223d

13581 Berlin
Germany
http://www.art-transfair.de/
  Vendor: Computer, expansion, Floppy, memory-upgrades up to 16 mb, Audio A/D changer, additional many other Atari items (16/32/64bit). Special lower prices for ABBUC members.

Atari800 Development Team 4/09

If it has been taken apart I have seen the ribbon connectors not line
up or short.

If it doesn't cure itself or by repeatedly hitting the key you will
have to take it apart. After you get it apart if unplugging the
keyboard stops the problem then you may have a short in the keyboard.
If it still repeats w/o the keyboard plugged in there isn't a lot of
things it could be. Only two 4050 CMOS chips and the POKEY chip do
everything.

Rick

In comp.sys.atari.8bit Bill Kendrick <bill@newbreedsoftware.com> wrote:
> FYI - Plans for Atari Party 2010 move ahead!

The date is officially set:

  Sunday, March 14th
  12pm-8pm

At:

  Redwood Park Community Bldg
  1001 Anderson Road
  Davis, CA 95616

See: http://www.newbreedsoftware.com/atariparty/2010/attend/ for
details, maps, directions and public transit options.

> (1) We'll be screening a movie (if not two!).
>   So far, the documentary "Once Upon Atari".
>
>   http://www.newbreedsoftware.com/atariparty/2010/movies/

We'll also be screening Disney's "Tron!"

> (2) We'll be having a raffle, with some prizes donated to the event
>   by corporate sponsors:
>   * O'Reilly Media (gaming & retrogaming books)
>   * ThinkGeek ($100 gift certificates)
>   * Legacy Engineering (some USB Atari CX-40-style joysticks)

Now listed here:
  http://www.newbreedsoftware.com/atariparty/2010/raffle/

The raffle now also includes three Atari computer systems
(Atari 800 + 1050, an Atari 400 + 810 and an Atari 400).

Last-modified: November 16, 2009

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, and 800XE personal/home computers, and the Atari XE video game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from 1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

Today, the Atari computer intellectual property rights, along with the home market rights to the Atari trademark itself, are owned by

Atari Interactive, Inc., a subsidiary of Atari, SA of Lyon, France.

I just saw this:

"MULTRIS.ARC Multi Tetris is a tetris clone for the MultiJoy
interface. Use max. 4 joysticks for max. 4 players each filling up
their on column."

here:
http://www.mathyvannisselroy.nl/special stuff.htm

It occured to me, one could do a four-player Tetris-style game

on the Atari using two pairs of paddles.

Each player would 'twitch' their paddle to the left or right to
slide their piece, and push the paddle firebutton to rotate.
Perhaps push-and-hold firebutton to drop their piece to the
bottom.

Anyone feel like coding this? ;)

Some readers here may remember a Group I set up with others to provide and
exchange information between users of 8-bit computers.

Well, one of the founders has passed away (died, that is) and Gordon

Woolliscroft and I thought that as the whole 8bit scene has dwindled we
ought to wind the thing up and put the money to good use, so that's what
we've just done.

There was about 600 English pounds in the account (my, that interest did
mount up) so we have decided to split it 50/50 between a kidney research
charity and Great Ormond Street Children's Hospital.

We hope that meets with everyone's approval (cos it's too late to change it
if it ain't!)

:-)

Sorry to hear of Gordon's passing, but I approve of the charitable
donations.

Andrew

Sometime ago you mentioned an
Atari 8-bit game called Evening of Horror,

A while back I went thur, some of my disk library
and found it. However, this is the demo version.
Which allows you to play up to a point, then
provides a address where you can order the
full game.

It's a interesting text adventure with some nice
graphics screens. Similar to The Pawn.

I still have some more disks to go thru,
but, I don't think I have the complete
full version. If I find it, I will post something
in here.

Some other 4-player, simultaneous-on-the-same-computer game
ideas:

  * Multiplayer space battle ("Space War") or "Asteroids"
  * Multiplayer racing (3D like Pole Position, Enduro or
    Night Driving; or 2D like the GameLink game I saw,
    "Speed-Up!", or "Championship Rally" on the Lynx)
  * Multiplayer "Lunar Lander" (who can land first?)
  * Multiplayer shoot-em-up (like "Space Invaders")
    (I also realize there was "Demons to Diamonds", which
    was 2-players facing each other... this would be
    four players somehow sharing the ground at the bottom)

Heck, one could even make a jump-and-run game
(not unlike a simplified version of "New Super Mario Bros. Wii"),
since... for the most part, you use left/right/jump.

One I was thinking about that I'm pretty sure wouldn't
work would be a 4-player simultaneous "Combat" / "Tank"
game, since you need controls for both forward/back and
firing.

I could probably prototype a bunch of these in TurboBASIC XL.
("POKE HPOSP0+PLY,PADDLE(PLY)" ;))

I have a program I'm writing and I've got the following going on:

```
5 DIM X(4),Y(4),XM(4),YM(4)
...
100 FOR P=0 TO 3
105 X(P)=X(P)+XM(P)
...
199 NEXT P
```

I've used the TBXL compiler to compile the program (generate a .CTB),
but when the TBXL runtime hits that increment statement (line 105),
it falesly throws an Error 9 (out of bounds).

I tried bumping up the array size, but that didn't help.
So I've written this klugy work-around:

```
105 Z=X(P):Z=Z+XM(P):X(P)=Z
```

Seems to avoid the issue. Annoying, though...

Ooops, sorry, I've obviously not made it clear.

There was a third person involved with Gordon and I and it was he (not
Gordon) who joined The Choir Eternal.

Gordon is very much "still with us" as they say and it is he who has been
working so hard to wind matters up in the absence of the third signatory to
the account.

<snip>

A relatively playable prototype, in compiled TurboBASIC XL,
is available for your enjoyment:

  http://www.newbreedsoftware.com/padlandr/

Turn knob left/right to change angle of your Lunar Excursion Module,
press Fire to thrust. Try to land (facing upright, and without
descending too quickly) on one of the flashing pads. Whoever lands
first is awarded a point.

Lots of ideas for improvement. No idea if I'll ever get around
to it, but hey... if someone wants to take the idea and run with it,
that'd be awesome. :)

Ever since the Wii came out, I've been thinking the Atari deserves
more 4-player games. :) (And I don't have a MultiJoy, and only
just acquired an Atari 800, so I've been thinking of ways paddles
could be utilized. :))

I think you may have an 'Oh in there where you think you have a 'zero
or some kind of DIM error. I just tried it out and it ran w/o errors.

Rick

Under the TBXL compiled runtime (RUNTIME.COM running a *.CTB file)?

I also discovered that math was getting kind of horked, when things
went negative. My lander was flying off the top of the screen
really quickly, due to this:

```
  IF YM(P)<-4 THEN YM(P)=-4
```

It's as though the moment YM(P) became negative, that evalulated
to true, and caused the lander's speed to hit its max.

Simiarly, it would skip to the top of the screen sometimes:

```
  IF Y(P)<-12 THEN Y(P)=-12:YM(P)=0
```

Like the moment Y(P) was less than zero, this would cause it to
jump to -12.

I simply copied all of the array(P) variables into 'local'
variables within the FOR...NEXT loop, and then copied them back
into the arrays when I was done, and suddenly the game ran
the same under the compiled runtime (RUNTIME.COM)

as it did under the interpreter (TBASIC.COM). Except faster,
of course. :)

```
100 FOR P=0 TO 3
101   X=X(P):Y=Y(P):XM=XM(P):YM=YM(P):REM get local copies
105   IF YM<-4 THEN YM=-4
110   IF Y<-12 THEN Y=-12:YM=0
120   REM etc.
198   X(P)=X:Y(P)=Y:XM(P)=XM:YM(P)=YM:REM copy back into array
199 NEXT P
```

Making the code & line numbers up as I type this, but it's
pretty much the jist of what was going on, and the changes I made.

Maybe I'm using a crappy version of COMPILER and/or RUNTIME?
(I'm using one that was in ARC that included "TBCOMP.DOC" composed
by Dave Arlington.)

shrug

Might as well drift the thread a bit. Kind of thinking in ASCII. Usual caveats apply, kind of comming out of a long period of procrastination so 8 to 10 years behind in projects. Priorites are a bit non-atari too in that my first priority at the momment is to get my sailboat ready for the summer.

Did some more thinking on multiplayer games. Thinking may not be what I do best but it is what I do most. I sympathize with the old school 'group of people gathered around the electric Atari Hearth' but I like the idea of over a network game too. I may have posted some of this before but I am doing it refresh my thinking. I bought a web domain and my son put up a SMF web board so I will take it there from here on out so I don't get my usual flames. I can't tell you the number of

times someone has called the 1489 version of SIO2PC [junk, trash, shouldn't work, ugly] for not meeting RS232 specifications where I just wanted to ban them by IP address. Now I will be able to!<grin>

I think it could be done with a packet assembler and tosser. I just haven't been able to burn enough brain cells to be confident in the best way to do it yet.

In the '80s when I was writing some specialty communication programs I wrote an R: interpreter. It had most of the equivalent BASIC statements so you could remotely run programs. For example if the BBS sent the string
#G GRAPHICS 2
The #G would be read as an escape sequence to go from text mode to interpreter. The local computer would then execute a GRAPHICS 2 command. Unfortunately I added a bit too much to it. It would accept binary load type commands for things like redefined character sets and had a USR() command. It was pointed out to me malicious people could use it to format someones hard drive so I never let it get out in wide circulation.

The problem with an old school BBS is you only get one or two people on at a time max. The Atari is even worse in that it typically only does one thing at a time and only uses one SIO device at a time.

I think most of the problems have now been overcome with networks and the internet. I am thinking of some of the early stuff like Kali, Warcraft, Doom over a network (DWANGO?), kind of examples but brought down just a bit simplier to get to the R:/consol level.

It's also a bit more appropriate for our user base. Approximations of course but you have about a million computers sold with probably half of them in land fills and most of the other half in closets and attics. I think the OSS sales data was only ~5k-10k per language which to me indicates even at the height of popularity maybe 2% programmed and only half of that took it seriously enough to buy serious tools like MAC/65. I think it is even worse for hard core stuff like MIO or Black Box. Looking at eBay feedback for j131 and Steve it seems like SIO2PC cables did around 5,000 units worth of business there. Keeps with my perception of the Atari Proles being cheap and lazy. They will spend $25 on a cable if it allows them to get a copy of every game ever made and play it. Forget about solder or taking the computer appart.

Anyway since my early efforts I wrote a BASIC for IBM clones: I learned about tokenizing! If I was to rewrite the R:interpreter now I would definately use tokens like [133, 134, 135] =3D> [graphics, poke, print].

Which brings me back on topic of one way a multiplayer game on an Atari may work. If it to be used by the Atari Proles it has to have a lot of bang for the buck even if it is zero bucks. I think it just needs access to a network and at least one of the network computers to

do some packet assembly. The individual actions of each Atari<or other computer for that matter> would be assembled and passed to all the computers using the serial port.

Let's say you have 3 Ataris in a network game of Pac Man. A one byte J/S status would be sent over the R: device to the network and a 3 byte packet assembled. The packet could either be assembled by one of the network computers or by one of the Ataris in peer to peer type connection if that is the right term. The three byte packet would then be sent out to all of the computers to update the local status.

If you do it via serial connection to network the only upper limit you have would be local processing power of the Atari. If you wanted 200 people in a game you could just use 200 byte packets. At ~19 kbaud you would still get more updates then shadow registers get updated but moving 200 objects on screen would tax the system.

Silly and trivial, you could have a blob type game of life. 200 people as 200 pixels. Maximum distance from another pixel limited so you would have to move on mass: Like an Amoeba eating crumbs.

For me it's two-fold. I want to keep things simple because:
(1) I am lazy. And forget about solder or taking my computer apart!
(2) Other people are as well, so if my game runs on stock HW, that's
    a bonus.

This, plus no time to invest in doing things in anywhere near
a hardcore fashion, is why I don't have a MUX anymore.
I got rid of my MyIDE cart. My USB cart got busted (hard drop
onto the floor), so I just gave up on that, too.

Sure, I'd love to attach a PlayStation drumkit or guitar, or
figure out the magic necessary to get a Wiimote working with
the Atari, but if I went and wrote a game that utilized it,
there'd be pretty much a 1-person audience.

Heck, I'm sure that by making a paddle-based game, I'm killing
the audience of my game. (Which is why in my "to-do" list,
adding joystick support listed. At least then two people could
play lunar lander simultaneously, if not four. ;))

<snip>

The other night I thought (again, from the paddle point of view) of
a Hover Boover style game, but with Roomba robot vacuum cleaners. :)
Yet another odd take on Pac-Man (which was odd to begin with).

Rambling, gotta focus on work,

Right, on Atari800 emulator. Renamed the code snippet to AUTORUN.CTB
and
binary loaded RUNTIME.COM to auto execute it. Added a few lines like
205 ?"Press any key to return to DOS"
210 IF PEEK(764)=3D255 THEN GOTO 210
220 END
<SNIP>

Is there a cut and paste for the emulator or do we have to go through an EOL converter programs? I have verified that some of my 'went for a swim in the basement' computers work but I don't have any set up with SIO2PC or APE. For that matter, I don't have a DOS computer that survived to run SIO2PC and I didn't stay in the game long enough to register either SIO2PC or any flavor of APE. I did run APE for Windows to make sure I had hardware functioning but it wasn't a permanent set up. Getting old and crotchety to the point of seeing a the APE startup nag or trying to get a DOS computer up and running gets me tuckered out.

Anywho, I was never real good with BASIC let alone Turbo BASIC but I figure it you may be right about munged file somewhere or it could be something harder to track, like loading RUNTIME.COM tries to execute something, anything, and by the time you get the prompt for ~Run what file? it is so confused it may be executing random fragments in memory, old code, or DUP.SYS area.

Blah, weird. Well, I didn't have time/energy to boil it down to
a test case. I was mostly annoyed that the game wasn't running
the same when compiled as it was when interpreted, so I jury-rigged
it until it did work. Then it was 2am, and way past bedtime.

All of my Ataris (except the 7800 & Jaguar, enjoyed on a semi-regular
basis by my toddler) are boxed up and ready for next month's
Atari Party. ;)

So I'm done worrying about it for now. (Who knows, though, I might
dump the TBS source code into a TXT file and try to rewrite it
into Action!)

I've got a 1010 that I just inherited that you can have.

I have no idea if it works (the motor works, at least :))

Let me know. I'll just ask for shipping.
(Otherwise, I'll be trying to give it away at my Atari Party
in mid-March.)

Shoot, I posted before I was done.

Initialize variables before using them.
FOR P=3D0 TO 3
X(P)=3D0:XM(P)=3D0:ETC.
NEXT P
then you can do a X(P)=3DX(P)+XM(P)
also a good idea to use variables instead of numerics.
N0=3D0:N1=3D1:N2=3D2 ETC.
When you referenced X(P)=3DX(P)+XM(P) you can't assume X(P) starts as
zero.
Also, the CTB may be somewhat messed up.

I hear about S-Video from Atari 130XE. High resolution display looks better
sharp if I use S-Video than the composite video. Any comments? S-Video has
chroma?

Are you using it in an emulator or do you play it on a real machine? The
problem with FS II is its copy protection. If it doesn't find the disk
timing correct, which you can only get from the unmodified original
disks, it breaks after a short while.

So long,
     Thomas

Wihtout a doubt s-video is better than composite: the luma and chroma
signals are separate. However, they're still connected on the
mainboard (hence artifacting), so results can vary and it really

depends what kind of display you're looking for. I achieved the best
possible s-video picture from my 800XL by removing the RF modulator
and severing all connections between luma and chroma (and thus
destroying the composite video out: http://www.atari8.co.uk/projects/).
This doesn't work for everyone, though, and trying the same trick
didn't work so well on the 130XE. However, you should get decent
results with the kind of s-video cable readily available on eBay which
has a diode on the chroma designed to reduce noise and vertical
banding.

Your friend would probablt be better off buying an AtariMax flash
cartridge:

http://www.atarimax.com/

Then going here:

http://trub.atari8.info/index.php?ref=3Dsdx_upgrade_en

and downloading the flash ATR and making his own SDX cart. The latest
versions are a dramatic improvement on the originals and they're free.
The last original SDX cart I saw on ebay was about $150.

On the other hand, if anyone would like to spend $150 on an original cart,
feel free to drop me a line. :) For this guy, it may come down to whether
or not he needs a passthru cart. If not, then I'd agree the MaxFlash cart
is a great way to go. Also, I saw a somewhat recent post on AtariAge
detailing a modification to allow the new SDX into an original cart:

FWIW: The 130XE has about the best video of the series. If you have an
800XL or 1200XL the video mod is just about required.

I usually just use a DIN connector with all the pins brought out. You
can use Composite Luminance and Composite Video<?Chrominance> plugged
into the S-video of your monitor. With a 130XE it comes out clear to
the point where games like Ultima III no longer have artifacting and
look like a graphics 8 screen.

Thanks for the info,

I don't have to have the X cart, For what I'm doing I can use the disk
based 3.2D.
I use to have a bunch of those carts but sold, traded them as time went by.
Just like to have one to complete my old setup.

Will the game Gorf in a original cartridge work on XL/XE machines?

Does the Gorf file version, if there is one, require a translator disk on
the XL/XE?

It is a powerful DOS that can alphabetize the directory and
display binary file load vectors as well as do some batch file
processing among its added features. I got a copy in the '80s
and had no manual until I found it online in the '90s. IIRC, it
lost DOS 2.0 compatibility in enhanced or double density or
writing that sorted directory back to the disk as it dropped
the file number and forward sector chain pointer from the last
3 bytes of each sector. Fell into disuse when MyDos 4.x went
public domain plus we had modified A.N.A.L.O.G.'s DiskTool
by adding all of the functions we needed.

NO.

I do have someone who wants one, I'd like to have one myself, but don't
actually need it.
He wanted me to find one for him if I could.

If you used this e-mail address to e-mail me, then no I didn't get it.

Try e-mailing me again please...

original cart won't work on xl/xe, file version requires OS B. I
think, I didn't test it out.
I found two file versions.

I just tested a set of Wireless Joysticks for the Atari 2600. I did it on my Atari 800XL, and it works! I need to warn you, these Joysticks require a Power Supply, the kind for an XEP-80, SX212 or an Atari 2600! The bad news is the Wireless Joysticks dont come with Power Supply! You must Supply your own! I have a Boxed Set!Please Reply Irregardless of your Answers! Thanx! =-=Ben=-=

Atari800 is a nice multi-platform open source one.
(I use it on Linux, and have used it on Windows.)

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family
of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE,
130XE, and 800XE personal/home computers, and the Atari XE video game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from 1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

Today, the Atari computer intellectual property rights, along with the home market rights to the Atari trademark itself, are owned by Atari Interactive, Inc., a subsidiary of Atari, SA of Lyon, France.

John, each Joystick uses a 9 volt battery and shares the 2600 Power Supply!

---------- Forwarded message ----------
Date: Wed, 13 Jan 2010 09:33:54 -0800 (PST)

I just tested a set of Wireless Joysticks for the Atari 2600. I did it on my Atari 800XL, and it works! I need to warn you, these Joysticks require a Power Supply, the kind for an XEP-80, SX212 or an Atari 2600! The bad news is the Wireless Joysticks dont come with Power Supply! You must Supply your own! I have a Boxed Set!Please Reply Irregardless of your Answers! Thanx! =-=Ben=-=

---------- Forwarded message ----------
Date: Mon, 11 Jan 2010 10:56:36 -0800 (PST)

Hi,

Would the wirless joysticks referenced below wotk with an 800XL?

Does your TV have the cabability of hooking up
a PC through a monitor jack? If so, then it is
easy. Just use a C64 monitor cable and a video
converter. I hook my XE up to a SVGA monitor and
it looks great.

ok, Which programs, or types of programs will not work using the emulator?

Any problems running Atari Basic programs?

And how is machine language routines handled, do these work too?

zGreetings,

Regarding the ICD MIO, I would think one should be able to do more
with that 50 pin Connection..

I bought mine already setup with an Adeptic 4000A Controller Card,
attached to, 2 hard drives.

Things have changed alot now, but back then, did one need a Controller Card
to
use a hard drive or did it depend on the drive?

Can one still find any hard drives to work with the MIO now?
I have 2 or 3 older JF

Has anyone tried using the 50pin connection of the MIO with anything without
using a controller card?
Now there are controller cards for all kinds of things, looks like one could
use
some of these to setup something cool. The Built in Menu would probably
have to
be changed, but surely this could be done with a software patch, or a

hardware
upgrade/patch.

It's a shame to let such a nice piece of equipment die off.

I've never had a Black Box from CSS, but from what I've read, they are
really nice as well.
I still have one of their old catalogs here somewhere.

phantomm_1 <phantomm@suddenlink.net> wrote:
> ok, Which programs, or types of programs will not work using the emulator?

That's hard to say -- I think most programs will work with Atari800,
though some of the trickier graphics things may have trouble
(like 8 player/missiles on a scanline, etc.) Though in some cases,
those might now be supported.

> Any problems running Atari Basic programs?

Nope!

> And how is machine language routines handled, do these work too?

Yes, it's a full emulator. It emulates the 6502 CPU (sorry if I got the
model number not 100% right ;)), ANTIC and GTIA graphics chips,
POKEY sound/etc. chip, and so forth.

It works with both disk images (raw data representing all of the bits
of data on a floppy or hard disk -- DCM and ATR files, for example),
cartridge ROM dumps, and even stand-alone binaries (EXE, COM, XEX, etc.).

It can also access the host filesystem (that is, your Windows, Mac,
Linux, etc. filesystem) and printer (as H: and P: devices, respectively).
It also supports input devices... you can use the host system's joystick
(Stelladapter is useful here; lets you plug a real Atari joystick into
your PC or Mac's USB port!) and can even use the mouse as:

  * paddle
  * touch tablet
  * koala pad
  * light pen
  * light gun
  * amiga mouse
  * atari st mouse
  * trak-ball
  * joystick

It can emulate an R-Time 8 cartridge, boot from cassette, emulate
the Atari 5200 game system (since that platform is so close to the
Atari 8-bit line of computers), supports extended memory, run in both
PAL and NTSC modes, and emulate a stereo setup (dual POKEYs, aka the
"Gumby" upgrade).

There are options for managing sets of disk images, swapping disks
(e.g., if you have an ATR image of "Disk 1, Side 1" and another
of "Disk 1, Side 2", you can easily 'flip the disk' by having it
swap disk images). You can also save state (dump memory/etc.)
and load it back later (kind of like 'suspending' a modern laptop).

It can take screenshots and record sound.

And finally, you can jump into "monitor mode" and debug or hack
stuff directly. (I have no idea how to use that, personally.)

And, it's open source, so you can examine and modify the
source code, help the project, port it to fun new platforms
(I've got an older version burned onto a CDROM that boots on
my Sega Dreamcast -- no modchip or hack required, btw!)

Enjoy!

}Things have changed alot now, but back then, did one need a Controller
}Card to use a hard drive or did it depend on the drive?

Yes. Bottom line was you required a controller; you could say it depended
on the drive, but it really only depended on whether the drive had a
built-in
controller on board. This per the manual and the previous owner.

I Have not tried any modern HDDs since the MIO was already configured
with two old, old 10 MB 5.25 HDDs when acquired around '88-'89. It has
performed well with few problems, but I may be sunk when it needs repair,
due to my limited tech abilities.

Your ideas for improvement and expansion sound intriguing.

-Jess

on the drive? Can one still find any hard drives to work with the MIO now?
I have 2 or 3 older JF Has anyone tried using the 50pin connection of the MIO
with anything without using a controller card? Now there are controller cards
for all kinds of things, looks like one could use some of these to setup
something cool. The Built in Menu would probably have to be changed, but surely
this could be done with a software patch, or a hardware upgrade/patch. It's a
shame to let such a nice piece of equipment die off. I've never had a Black Box
from CSS, but from what I've read, they are really nice as well. I still have
one of their old catalogs here somewhere.

The Adaptec <and Xebec> were actually SCSI to MFM [adapters,
converters, bridge, ...]. I *think* they may have made an RLL version
too but I can't recall any product numbers. It would take a deep
google search to find them.

IIRC What happened was IBM kind of set the market using an MFM 10 meg
drive in their PC. SCSI was in many ways a superior interface but it
requires more smarts in the drive. For instance, you could have up to
7 devices on a SCSI bus consisting of hard drives, printers, and CD
ROM. Few PC cards for MFM drives could handle more then two hard
drives and maybe a couple of floppies. Think of SCSI almost like an 8
bit wide Atari SIO bus.

So like everything IBM price for MFM drives was relatively cheap. I
recall when I upgraded from a 10 meg to 20 meg drive it was only ~$200-
$225 for drive and controller. For a while if you had a SCSI
controller I think it was actually cheaper to buy an Adaptec and MFM
drive then a native SCSI drive. I think that was pretty much what
Atari did with the 20 meg ST drive too i.e. 20 meg MFM drive with
controller.

But what happened was SCSI went head to head with IDE when it came
out. Wider, faster, bent more towards native IBM support. Drives
started doing stuff like only supporting 512 byte sectors because that
was all that was needed for IBM clones: This gave them problems with
the Atari market and SCSI lost the war anyway.

Kind of a crap shoot for Atari compatibilty now. I mean you probably
have to find a good MFM drive that will work with an adapter or an
older SCSI drive that still has compatibilty. I think you are in
general talking about 20-25 year old drives for compatibility.

For the record I went into Fry's last month and tried to buy a PCI
SCSI card. The sales drone said "There will not be any PCI to SCSI
cards available in any Fry's store." I ended up borrowing one from my
son and buying another off eBay for $3: I was trying to pull some data
off an old Syquest EZ135 drive. Everything seems to be USB, SATA, or
IDE now and it looks like IDE may be going the way of sound cards.

Rick

Well, the board (MIO) is already there, and will work on all XL/XE machines
AFAIK.
I've used mine with a stock 130XE, a stock 800XL, and a 256K 800XL.
I like using the 256k 800XL the best for my MIO. The RamDisks can be alot of
Fun.
Also like having an Atari Printer and a non-Atari printer connected at the
same time.
I have one of the all time great printers, the Star Gemini 10. Which uses
type writer
ribbons. So no expensive Ink to mess around with.

One could redo the board, add on the stuff the ole 8-bit needs and PooF! a
new
system. I don't know why someone has not already done this.
The MIO hardware has proven itself to be reliable. But when the old hard
drives go
bad, not sure where to find replacements.

The Atari ST could use a external upgrade system in a box as well.

Interesting, I know that took alot of time to get all that working.
Any idea of how many people use the program?

Tons of people. It's been around for a very long time -- since 1995 --
and is open source. (On any Debian or Ubuntu Linux platform,
do "apt-get install atari800" to fetch it from the repositories. :))

It runs on numerous platforms: X11, Atari ST, Amiga OS, WinCE,
Linux SVGA mode, Windows DirectX, Mac OS X, MSDOS, and even in plain
text terminals (good for hacking something simple in BASIC, for example).

Its SDL target allows it to run on even more platforms
(BeOS/Haiku OS, Sega Dreamcast and Xbox game consoles,
GP2X and PlayStation Portable handheld game console...
just to name a few I could Google for quickly).

I think I have an Adaptec 4??? RLL controller; it is in
a custom wooden case with the drives, a fan and an AT
power supply. IIRC back in the day some folks were
formatting their MFM drives with RLL for the added
15 to 20% capacity at some risk of dependability...

> I have one of the all time great printers, the Star Gemini 10.
> Which uses typewriter ribbons.

I certainly agree with that assesment! My Gemini 15 lost the
bottom two pins in the print head a few years back and I have
had no success finding parts or repairs for that great old
workhorse. I loved program listimgs with the G colon device
showing all of the control and inverse characters.

I fell in love with the net and all the compuiter teahcnology in the very early years and have loved it ever since, I have an IT Degree and Communications degree and will be working on my doctorate for the next five years, in bwetween I design websites, databases, Multimedia Produxction or anything that wil make me a penny, just student scraping by. But Guess what? I don't want your money, your e-mail, or anything. Each of these sites has a specific topic but they have them style and layout sothey are easy to navigate and ther a search function should take you to exactly where youwant to, or just explore, they have outside service you can acccess as well. Each site has 10,000 plus articles and they are updated everyday so you know you are gettin up to date information. ENough, here the computer and tech related sites.

Yep, From memory, there were several Adaptec controllers,
for MFM and RLL. I have a 4000A and another one, that
I think has a bad chip.
Not sure if you can still get those controller boards or not,
A few years back, I recall seeing some for sale as old stock.

I wonder if any better controller card can be connected to the
MIO for different devices/better hard drives?
It may be possible to rig up sometype of Flash Memory Drive
using the MIO.

This may have already been done on the 8-bits, I've not kept up
with all the different hardware projects.

> - Jess

I don't have any extra parts for the Gemini, I do have the original
manual. Which is for both the model 10 or 15.
They don't make manuals for printers like this anymore.
It's over 200 pages! Just glancing thur it, It even has info with
pics on replacing the print head. Programming the printer,
Character info.

(There is a replaceable fuse on the transformer which
is located inside the case where the power cord goes
inside the printer) Just in case someone reading has one that's
not powering up, it could be the fuse.

I could use some sproket paper, and sproket sticker labels.
The XMM801 Atari printer could really do some nice
pictures, but the pain was/is the printer ribbon.
After I printed my first 10 or so high res pictures,
I decided to use it just for text and smaller graphics

for letter heads/newsletter graphics.
Still have the printer, not sure if the ribbons are still
made or not. I recall that there was another printer
that used the same ribbon, but don't recall the name.

I used the NewsRoom, PrintShop, 1stXlent (wp)
atariwriter plus, TextPro and a lot of other DTP/WP
software back in the day.

The NewsRoom is a really nice DTP type program
for the atari 8-bit. I still have my original with the box
and was able to get the extra graphics disks.

If you still have that Gemini and want to sell/trade it.
I'd like to get it for a project. If the print head still moves it would
be great for use with a printer scanner I have for the ST.
It uses fiber optic cables that connect to the print head and
you can scan photos and etc using the printer.
It's a cartridge based system with disk software.
It's a old scanning system, but would be fun to
experiment with.

If there is anything I can help you with if you are still into Atari
stuff, just e-mail me. I've alot of different stuff.
And found a box full of atari related manuals, games and etc.

Does anyone recall any commercial or PD
Text adventure creation software for the
Atari 8-bit?

I'm sure I have a few programs, but don't
recall the names.

I'm looking for one that will allow me to
use graphics and sound in the text adventure.

Or just a plain one, if there isn't one that'll do
graphics/sound.

Also, looking for the names of the Best Commercial/PD
atari 8-bit Music related software.
Everything from Sound Digitisers, Sample Editors,
MIDI related, and etc.

And names of the Best Graphics related software.
Digitisers, Animation, Video related and etc.

Also, need programs for the atari 8 bit that do various
file, program conversion.
Such as converting between various Music files, graphic files,
and etc.

Another Curt Vendel find via Facebook: the ET100 ethernet
adapter for the Atari 8-bit(?). Looks (based on the
photo of a box or manual that he found) like the SX212 modem.

Anyone ever hear of this thing?

There's Clayton Walnum 'Adventurous Programming' Parts 1,2,3 in ANALOG
39,40,41.
I never used it, I suspect it might not work. Don't know if it does
graphics and sound,
doubt much graphics.
You might find the articles at cyberroach.com ANALOG archives.

I checked cyberroach, he doesn't have them. Any such programs would

be pretty hard to
figure out without reading the magazine article that goes with the
program(s).

Oops, sounds like it was an Atari ST device (mention of TOS).

Oh well. :)

Subject: Text adventure Software

Does anyone recall any commercial or PD
Text adventure creation software for the
Atari 8-bit?

I'm sure I have a few programs, but don't
recall the names.

I'm looking for one that will allow me to
use graphics and sound in the text adventure.

Or just a plain one, if there isn't one that'll do
graphics/sound.

Also, looking for the names of the Best Commercial/PD
atari 8-bit Music related software.
Everything from Sound Digitisers, Sample Editors,
MIDI related, and etc.

And names of the Best Graphics related software.
Digitisers, Animation, Video related and etc.

Also, need programs for the atari 8 bit that do various
file, program conversion.
Such as converting between various Music files, graphic files,
and etc.

Thanks for all the input!

I have hit a snag using the 1050.
The data line (OUT) from the peripheral (what would be IN for an A800)
is stuck logic high, which leads me to believe either it's DIL
transistor
pack was blown from a cabling mishap, or there is some other h/w
failure in the 1050. So, I'm going to set aside the 1050 until I can
devote my full attention to debugging it...

The suggestions RE bootstrapping CP/M all line up with what I have
read so far - Get a monitor working, get comms working (XMODEM,
IHEX loader, etc) and develop the CBIOS and system image on another
machine/emulator.

Also, Peter- I had thought about using a CBM drive- a 1571-
but it looks like it must have a separate CLK line, where as the
Atari drives did not (I think).

Thanks again,
  Tarkin

That's one way for a computer company to go out of business. Set fires
at all the companies that develop third-party software for your
platform. Way to go, Atari!

I think this just about sets a record in an industry known for the
terribly mistaken decisions made by various companies at one time or
another.

Yes, and it looked and felt like a real computer! It even had a nice
keyboard.

But it was pretty expensive, and it wasn't so popular as to have lots
of software written even for its principal operating system. So it
died pretty quickly when the IBM PC came out.

I keep looking for a way to give the desktop PC that "real computer"
feel.

That's correct, it has bidirectional data and clock lines, a pull down
attention request line, an attention line from the computer side,
ground and reset - six pins. The 1571 is the better choice than the
1541 since the 1571 supports a much faster version of the protocol -
when the 1540 was produced for the Vic-20, it had a hardware serial
protocol, and they thought they could use the same one for the C64,
but they hit a hardware snag (the CIA chip? the main processor / video
display processor phasing? some interaction? I forget), and so had to
bit-bang it. And of course, the efficiency of the protocol was because
it was in hardware - bit banged it was as slow as watching a glacier
melt before global warming.

The advantage, as noted, of the 1541/1571 family for this is that you
can check that you have the protocol working before trying to put it
to use, by writing a small program to talk to the drive and see the
response.

The 1571 also has more capable built-in support, since the C128 came with a CP/M built in, and while they should have run the Z80 off the dot clock at 8MHz and used wait states to interface with the C128 memory bus, file-based operations at least were a lot more nimble in C128-CP/M+ than in the old C-64.

For the 1541/1571 serial bus computer side pin-outs, view this in a monospace font (eg copy and paste into a console text editor or Wordpad with Courier). Its one of those DIN plugs that CBM loved so much.

Serial I/O

Pin	Type
1	/SERIAL SRQ IN
2	GND
3	SERIAL ATN OUT
4	SERIAL CLK IN/OUT
5	SERIAL DATA IN/OUT
6	/RESET

This was the first I personally owned, used a TV as its screen.

The formatting problems are Word 2007's fault: I thought I'd caught
them all, but obviously not. Too bad that thirty seconds using The
Last Word has flattened your enthusiasm completely! ;) If your
emulator set-up can cope with CTRL+L, you can load up DESIGN.TXT and
read all about the programming concepts that appeared to interest you.

I read somewhere recently an article about the perceived advantages of
separating text composition from text layout. I do believe that the
appearance of the document gets in the way of creative flow in the
likes of MS Word: hence programs like Q10 on the PC. My writerly

output when using an Atari 8 back in the nineties was greater to a ratio of 10:1 compared to my literary output on the PC. There may be other factors contributing to this, like not being at college any more. :)

The original manual for LW was written using LW 1.0 back in 1999 (For information, BTW, the software initially took six months to write. Ten years later, the 80 column version took another six months' worth of evenings and weekends to write, test, and debug) and then ported over to the PC this year for sheer convenience. The source code for the software was compiled "in situ" (on an emulator) using my own MA65 assembler until June this year, when I upped sticks and moved to a cross-assembler.

Did you connect the 1050 to an Atari computer or to your SBC?

If you connected it to the SBC, be sure to provide +5V on the
+5V/Ready input of the drive (SIO pin 10), otherwise the drive
will just sit there quietly.

so long,

Hias

Oh, only in terms of using it in an emulator. And as much as I love
and promote Atari800, I still prefer the real thing for real uses.
(I'll crack something open in an emulator to get the gist,
but if I really want to enjoy a game or demo, or do some coding,
I do it on my 800XL or my (new-to-me!) 1200XL.)

>

That's what it's been doing :^(

> so long,
>
> Hias

Thanks for the tip!! I had thought the drive output electronics
had gone bad, so I disconnected my second serial port
interface on the SBC, and ripped out the Atario SIO
protocol test code. Luckily, I backed it up....

I will restore the setup, attach the (READY) line, and report back!

Thank you!!,

There was an invention made some years ago that was called the "hard
disk drive" and stores much more data - several modern computers are
equipped with one. On the A8, MyDOS can handle 16MB partitions and
SpartaDOS can handle 32MB partitions. As this is not much by todays
standards, usually the hard disk drive is replaced by a SD card or USB
stick in a SIO2SD or SIO2USB interface.

> There is also the first
> load of data problem, 152k at ~19kBAUD sio speed

SIO is not restricted to 19000 bps, it is around 4 times as fast on a
stock A8 (as you can experience with a Speedy, Turbo or Happy equipped
drive) and up to 126000 bps with a modified OS. Additionally, PBI hard
disk interfaces were available (e.g. the MIO) and there are currently
projects to make them available again.

Since you are so know so much more then me about computers and the
Atari, how about telling me who came up with the 1489 version of the
sio2pc interface and the original Ape Pro cable?

Just and aside, after about twenty years I am really starting to grow
tired of some of the crap you get on the internet. I mean twenty years
ago you got sophmoric crap but it was usually from someone who was
intelligent and sociable enough to at least attend college so as to
have a certain level of knowledge and access to the college news feed.
My point being you could have a difference of opinions and still have
an intelligent argument.

Take Thorsten as an example. Right in my post I start off with

> > that a stock disk drive will not be able to store that much data

This would indicate that I am aware there are both stock and modified
storage devices otherwise I would would not have specifically put the

qualifier 'stock' in my statement.

Now dear Thorsten, from there you seem to draw several false conclusions, proceed to set up a straw man argument, and into hominem insults. Specifically anyone reading my post in context can tell I am trying to convey the fact the modification will not be of great benefit to people with unmodified systems. You then proceed to lecture me about modified systems. The point of modifications being available is not in contention or made in my post. Quite the opposite, I would expect someone without knowledge may follow up my post with a question like "what non stock storage options are available?"

The point I *do* infer and what is perhaps in question is the relative number of people with modified systems. I don't have all the numbers for the number people with modified OS, storage, and technical ability to handle such modifications but experience tells me they are in the minority. I have seen sales estimates of Atari computers from several sources, estimates of the number of people who actually program on the Atari, sales of OSS programming languages, and sales of sio2pc cables.

There is a sliding level of participation where ~95% of the people who have ever owned an Atari have neither learned to program or modified it. It makes me skeptical that this modification will benefit the Atari community at large. The numbers are all wrong. In general your position seems to assume that an otherwise normal person can be convinced to pass pictures from their ~1024x768 32 bit color display Intel box to view in glorious 256 color mode. I can hear my S.O. asking "Why would anyone do that?" and she couldn't see normal with a pair of binoculars from where she lives.<sic>

So what needs to happen is that the VBXE ships with a big hard
drive or SD card attachment. ;)

ducks for cover from both sides

Well I believe the modification can function as storage too which adds
some value. I don't think there is a commercial memory expansion
available now.

Problem is history can be a cruel mistress. If you look at the early
80 column boards/carts like Bit3 and Ace<???> they are extremely rare
having never sold well. Ditto for that 80 column joystick thingie that
Atari made, XEP80.

We have had some really cute video mods in the past. Double check me
because my memory may not quite be what it used to be but Michael
StClair<sp?> developed a gen lock for the Atari, I happened to go to
the SLCC meeting where he presented the project. Bob Wooley did at
least two: One was an 80 column 6545 using its own memory and the
other was a dual ANTIC<GTIA?> that effectively ~doubled the amount of
memory that could be displayed with the resulting increase in colors
and lum levels. You could do something like a 16 lum mode overlaping a
16 color mode.

These were both great hacks but I doubt if 10 people were able to get
them installed. The problem is not the hacks, it is a combination of
user base and the Atari's original design. Heck, I was on CI$ when
Dataque was trying to sell their 65816 and you were around when FTE
was trying to do the same. Just not a lot of interest or participation
from the users as soon as you say "$69 and you have to take your
computer apart." WDC tried to make a go of it with the 65802 as an
upgrade path for 6502 based computers and they ended up abandoning the
thing. It isn't just us, seems to happen in just about every consumer
orientated computer from the Apple to the Oric. If you came up with a
hack that saves people a $1,000/year on their utilities and gets them
laid, you would still have trouble selling it around here!<grin>

As much as I hate to admit it, Mihocka was right about emulators being
the future for the masses. Just saw my son's Google phone and it has a
C64 emulator on it. I have a NES emulator on my MP3 player. There's
probably more 8 bit systems set up as emulators on cell phones then
real ones. I wonder if he goes to their forems and rants about them
all being thieves now? Bigger audience!

You attended college and yet mix up "then" and "than"? Well, it would at least be wise not to boast about it. Additionally, it's not considered nice to call someone a jerk and assume he had a worse education than yourself, in fact in my home country bad manners are considered to be an obvious sign of bad education.

...and even there you were wrong, as the stock XF551 disk drive stores 360 KB of data on a DS/DD diskette or 170KB on SS/DD one. But as I carefully tried to indicate to you already, there are better solutions available and they already were back in the 1980s.

You really do know a whole lot more than me about computers in general and especially about stock Atari hardware, no doubt about that.

The VBXE is not a mass-market product, for Sebastian is fully aware that there is only a three-digit number of Atari enthusiasts who would spend the amount of money on their A8 hardware he asks for this expansion (me being one of them). Those enthusiasts are very likely to already own expanded disk drives, SIO2SD/SIO2USB/SDrives, IDE or SCSI hdds and the like, and those not that enthusiastic about their A8 gear will most likely get along quite well with a stock 800XL with 1050 and any cheaply available means to exchange data with their PC or Mac.

I don't know how you expect anything of the more recent homebrew
products to "help" the "Atari community" (help them with what btw?), but
personally, I appreciate it when someone like Sebastian comes up with
something new and exciting and do not try to talk it down.

EOT

Ah, I see. :) I've always been a fan of Atari800WinPlus, but the lack
of VBXE support means I'll be doing more development with a cross-
compiler and a real Atari hooked up via SIO2PC. And as for the 1200XL:
always yearned after one of those!

EOT we can only hope. You come here out of the blue with your first
post insulting then take exception to being called a jerk?

I would give you some usenet etiquette lessons like go through a few
old posts and that spelling flames are frowned upon before further

exposing yourself as ignorant but you seem to want to make a career of
it.

This has gone on far enough, I will get specific.

You took offense where none was intended and as such posted irrelevant
and insulting drivel. My comment about VBXE:

"Spectacular on a hacking and technical competance level of course"
<ok, competence>

No amount of running a spell checker, trying to change the point of
contention, or back peddling will change your blunder. You took
offense where none was intended and started off flaming on the basis
of your mistake. My negative comments were directed at the Atari
processing speed and stock I/O. My comments about VBXE would be
considered by sane people to be a complement to the designers.

Most of the people in this newsgroup have known me for 15-25 years. In
that time I doubt if I have ever attacked any hardware designer or for
that matter programmer as you seem to want to portray my post here.
Rude and ignorant behavior I do take exception to of course.

Rick

As you chose to ignore my wish to end this thread...

Am 24.12.2009 06:56, schrieb ricortes:
> EOT we can only hope. You come here out of the blue with your first
> post insulting then take exception to being called a jerk?

You considered my first post insulting because I corrected your false assumption that someone with a VBXE would start disk juggling with single/enhanced density disks on a stock 810 or 1050 disk drive to get a single multi-colour picture displayed (as if neither compression algorithms nor the XF551 and other mass storage devices with higher capacities existed) and your false claim that the SIO speed is the same speed at which a non-modified stock Atari disk drive sends data.

Well, then you are insulted by facts, and I'd better not tell you that "Bomb Jake" - which needs 256 KB of extra RAM - has recently been compressed to fit on a single 127 KB disk.

If this lightning struck you out of the blue, the level of knowledge on this newsgroup must have seriosly degraded.

> I would give you some usenet etiquette lessons like go through a few
> old posts

I have read the thread from the beginning (RFC 1855 3.1.3.).

> and that spelling flames are frowned upon

If someone boasts as openly as you about his oh-so-high level of education and his oh-so-long presence "on the internet" and - in this posting "in this newsgroup" and at the same time makes grammar and spelling mistakes like a child (and not the most clever one, I might add), I find this amusing. Whether you consider it "flaming" (after calling me a "jerk" and trying to implicate I have a worse education than yourself, remember?) to point this obvious discrepancy out does really not matter to me.

> "Spectacular on a hacking and technical competance level of course"
> <ok, competence>

Your technique to rip short quotes out of their greater context to "prove" that you didn't express what you did might be amusing for someone who has no experience in this style of discussion - you are apparently still suffering from the delusion that I am new to Usenet because I don't write in this group as often as you. You inability to counter any of my claims and arguments and to answer any of my questions - it is obvious that's why you are not quoting and/or responding to anything I wrote - does not speak for you.

> My negative comments were directed at the Atari
> processing speed and stock I/O.

The VBXE has very advanced blitting capabilities to take the load off the CPU just because of that, as you could have easily found out reading

the specs on vbxe.atari8.info. And the stock I/O speed of the A8 is
depending on the interface used (PBI is much faster than SIO, which
itself is around 78000 bps - HSS-Copy with modified 1050 drives even
achieves 96000 bps on a stock XL/XE).

              Welcome to the comp.sys.atari.8bit newsgroup!

                  Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family
of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE,
130XE, and 800XE personal/home computers, and the Atari XE video game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by
Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of
Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from 1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

Today, the Atari computer intellectual property rights, along with the home market rights to the Atari trademark itself, are owned by Atari Interactive, Inc., a subsidiary of Atari, SA of Lyon, France.

Good advice.

Boing!

If you think you can jerk a judge around with patently bullshit answers
that are the equivalent of saying "Prove it!" while giving him the
finger, think again.

Judges are not stupid. They are cranky, conservative old men,
infatuated with their own estimate of their abilities, with a jaundiced
view of the rest of mankind, and drunk on the power they have exercised

over others' lives, true - but they aren't stupid.

And courts are not just about old men in fusty wigs, funny clothes, and oak paneling. Behind that veneer lies power, naked and raw, with very, very sharp teeth. Cross them and that power will be brought to bear very forcefully indeed.

If you find yourself in court you have already lost - bigtime! Even if found innocent it will be a sentence of bankruptcy with perhaps your marriage, your career, and your future in tatters. That's the upside.

So make sure you don't find yourself there. But, if you do, I suggest presenting a very submissive and very respectful demeanor. Unless, of course, you'd like to go out in a blaze of glory, a hero to us all, as you begin your long sentence :-)

Hello, Bruce!

I don't know what you use, to read the comp.os.cpm Newsgroup.

Me, I use Windows 98SE and Outlook Express 6.

Because Windows and Outlook Express (and Internet Explorer) are the standards, in local cybercafes. I have never seen a cybercafe use Linux. There was one small cybercafe whose owner was a fan of the Mac, but he went bankrupt, following a move near a supermarket (its customers did not went to the new location).

So, since I use "boxes" to surround my tables in WordStar, I investigated how to show them properly, once published on the comp.os.cpm Newsgroup.

Under Outlook Express, there is a "Affichage" (Display) pull-down menu. One of its options is "Taille du texte" (Size of text). The last option is "Fixe" (Fixed). It works but, unfortunately, you need to select it each time...

One day, I finally found that "Outils" (Tools) -- "Options" (Options, the last option, at the bottom), had a "Lecture" (Read) "button". When you click on it, you see a I/O window, with "Polices" (Fonts) at the bottom. When you click on it, you see another I/O window, with the first 2 pull-down menus being "Police proportionnelle" and "police =E0 largeur fixe" (Proportional font and Fixed font).

When I started using Windows, 10 years ago, there was something called "System" font. The name seems to have changed. Nowadays, I usually find one "Lucida Console" font which does the job. Once you click on "Ok", the program remembers that it must use a fixed font to display the comp.os.cpm Newsgroup messages. This has worked for me for several months. I read the comp.os.cpm Newsgroup messages in a fixed font. All that is missing is green characters on black screen. (And "single column" characters.)

Yours Sincerely,
Mr. Emmanuel Roche, France

I forgot to say that, when I publish a WordStar file in the
comp.os.cpm Newsgroup, I see it right-justified on the screen, since I
reformat the text to 64 columns. Apparently, Google Groups only allow
67 columns of text. I have no idea why they chose such a curious
value, rather than the 72 columns of MBASIC, coming straight from the
ASR-33 Teletype. All my 8-bit computers (and typewriters) have 80
columns. Even my Daisy-Wheel printer had 136 columns. This must be
progress?

Yours Sincerely,
Mr. Emmanuel Roche, France

Hello:

I am sorry to be a lurker in this group, but I do have one thing to
add.

I have the set up disks for PUFF BBS and how to set up the atari for
that. Seems there are old gems out there, but do we dare to unwrap
history,

JIM

(WEBSITE) http://www.atarimusic.net
(FORUM) http://www.atarimusic.net/atari-music-network

From sequencing Tangerine Dream concerts in the 80's to tearing up the
dance floor at the New York Blip Fest in 2010, Atari's reputation as a
music monster machine has persisted for a quarter of a century. The
secret behind its success is clear: Atari was perfect from the
beginning =96 it didn't need to change. For MIDI enthusiasts, the Atari
was and still is the ultimate bridge between man, music, and machine.
For chiptunists, the Atari offers a canvas of unexplored sonic colors
for electronica and 8-bit pop. AMN believes that Atari isn't just
about nostalgia; its about utilizing an alternative computer platform
for specialized digital music creation.

On Jan 1, 2010, The Atari Music Network (AMN) was launched, marking
the beginning of an exciting new era for Atari based musicians and
developers by offering news, resources, and an extensive social
network area.

The Atari Music Network (AMN) Mission Statement and Features

The Atari Music Network (AMN) aims to:

=95 Stimulate social interaction of Atari based musicians and developers
as one global community.
=95 Inspire and support Atari hardware and software developers to update
and resell their products or place abandonware into the public domain.
=95 Deliver relevant news, product information, downloads, and hardware
support
=95 Provide free marketing for Atari based musicians, albums, and events
=95 Bolster Atari's presence in the 8-bit pop scene

=95 Archive, catalog, and preserve Atari music software for future Atari generations
=95 Encourage the pirating and cracking of ex-commercial software (ethical rules apply)

AMN Currently Features

=95 Discussion Forums: The Heart of the Atari Music Community

I'm proud to announce version 2.13.1 of cc65. cc65 is a complete cross development package for 65(C)02 systems, including a powerful macro assembler, a C compiler, linker, librarian and several other tools.

cc65 has C and runtime library support for many of the old 6502 machines, including

- the following Commodore machines:

  VIC20
  C16/C116 and Plus/4
  C64
  C128
  CBM 510 (aka P500)
  the 600/700 family
  newer PET machines (not 2001).

- the Apple][and successors.

- the Atari 8 bit machines.

- GEOS for the C64 and C128.

- the Nintendo Entertainment System (NES).

- the Supervision console.

- the Oric Atmos.

- the Lynx Console.

The libraries are fairly portable, so creating a version for other 6502s shouldn't be too much work.

This version is a bugfix release against 2.13.0. Changes have been made in the following areas:

* Added a missing external declaration for ser_load_driver.

* Fixed an error in the 32K linker config for the Commodore VIC-20.

* Fixed a problem with bit-fields.

* Fixed a problem with initialization of local arrays with unspecified size.

* Function designators are now handled correctly when dereferenced.

* Corrected a problem with qualifier handling in arrays and structs/unions.

* Passing structs by value was never possible but is now correctly refused by the compiler.

* Ignore unknown preprocessor directives in an #if group that is excluded.

* Apple][target makes use of bit-fields in dirent.h.

* Documentation improvements.

Precompiled binaries are available for the most common platforms. On many other host platforms, the sources compile out of the box, so you'll able to create your own binaries.

For RedHat Enterprise Linux 5, ready made RPM packages are available. These packages may also work on other rpm-based Linux systems. Please note that there are separate RPMs for the compiler proper, the docs, and the target specific libraries. To develop code for one of the target machines, you need the compiler RPM package *and* one of the target machine packages. Be sure to download the documentation package if you're new to cc65.

For windows users, there's a user friendly installer package (the one with the .exe extension). All subpackages are selectable from within the installer dialogue. The installer will also setup the necessary environment variables and start menu entries. It is recommended that Windows users choose this package instead of the .ZIP files.

Precompiled binaries for DOS, OS/2 and Windows are available in ZIP archives. As with the RPM packages, you need the package for the development host system (Windows or whatever) *and* one or more of the target machine packages, plus optionally the doc package.

All packages are available from the MU software FTP server:

        ftp://ftp.musoftware.de/pub/uz/cc65/

More information on cc65 can be found on the cc65 web page at

         http://www.cc65.org/

There is also a mailing list for discussing cc65 related issues (programming, suggestions, bugs, ...). See

        http://www.cc65.org/#List

for information on how to subscribe to this list.

While I'm the main developer of cc65, it is actually a joint effort. I would like to thank the target library developers, all the people on the cc65 mailing list, all those sending suggestions and feedback, and even those bugging me for a new stable release:-) The CREDITS file is probably incomplete, but you know who you are.

Thank you!

Uz

Hi,
Good stuff! Any chance of seeing full support for SuperCPU (65816)?

No, I considered your first post to be insulting and more importantly
to have jumped to the WRONG CONCLUSION. Quit trying to change the
argument. You were wrong in then and you are still wrong now. Trying
to make this a spelling bee is just immature stupid. From there I was
just jerking your chain aka trolling. The farther you got into it,
i.e. explaining you were defending people who design hardware while
attacking someone, myself, who has contributed to hardware and
software for the last 25 years is a good example of your level of
logic.

Just go away, you have nothing contructive to contribute here and are
just digging yourself in deeper. The problem is you should have reread
my post and said "Excuse me, I see you were talking about the Atari
market and not the developers of VBE." but instead you chose to talk
about how bright you are. Kind of funny really. Heck, what ever floats
your boat.

You see that is another logic flaw. Somebody with a Nobel prize may be
wrong and conversely someone with a room temperature IQ could be
right. This is such an obvious blunder it is usually given in latin
"ad hominem" to show it has been known as faulty logic for some 2000
years or so.

People make that mistake all the time. We just had a bunch of
knucleheads cross posting from the apple group where one of them made
the argument ~'he is on 8 patents so he must be right.' If number of
patents was the determining factor he would have still been wrong.

Rick

For those unfamiliar with Kevin Savetz and his
"Classic Computer Magazine Archive" (http://www.atarimagazines.com/),
it's a digital archive of classic computer magazines. It started
as the "Digital Antic Project," to archive an Atari-focused series
of magazines, but since expanded to include STart (Atari ST),
"Compute!" (various microcomputers), Hi-Res, Amiga Plus, Whiz Kids,
II Computing, as well. The magazine contents are made available with
permission from the publishers.

I'm friends with Kevin on Facebook, and he just posted this:

  I've been making huge strides in getting new content online, after
  months of inactivity. For starters: 8 new issues of Compute! magazine
  added in the past few days, and more really good stuff is coming soon.

  You can follow the progress via RSS at http://www.atarimagazines.com/new.rss

  or Twitter at http://twitter.com/computerarchive

  or the new mailing list, sign up at
  http://www.atarimagazines.com/new.html (that's the best way, in my
  opinion)

  The latter two options give news about www.atariarchives.org and
  www.flightsimbooks.com as well as www.atarimagazines.com

Enjoy!

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, and 800XE personal/home computers, and the Atari XE video game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from 1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

Today, the Atari computer intellectual property rights, along with the home market rights to the Atari trademark itself, are owned by Atari Interactive, Inc., a subsidiary of Atari, SA of Lyon, France.

NEWSGROUP BACKGROUND
comp.sys.atari.8bit was created in November 1986 (as part of the Great Renaming) as a direct replacement for: net.micro.atari8

comp.sys.atari.8bit is unmoderated, and has no formal newsgroup charter.

The comp.* hierarchy of Usenet newsgroups is managed by the Big-8 Management Board: http://www.big-8.org/

RELATED USENET NEWSGROUPS
alt.binaries.comp.atari8bit
Programs for Atari's 6502-based orphans.

comp.sys.atari.advocacy
Attacking and defending Atari computers.

comp.sys.atari.announce
Atari related hard/software announcements. (Moderated)
Moderator: Kevin Savetz
comp.sys.atari.announce web page: http://www.atariarchives.org/csaa/

comp.sys.atari.programmer
Programming on the Atari computer.

I was searching the web archive and thought I would see if they had a
copy of my old web site. Turns out they did but it is just as bad as
it was back then. Heck, 1997 and I think I had just finally broke down
and got W95 so I could play Diablo or something else equally as dusty.

The front end had some non serious problems, namely the links appear
twice and when I left netmagic ~5 years later I still hadn't fixed
them.

It wasn't meant to be a dummy front end but most of the action took
place behind the scenes. WWW at the time meant you could FTP to a
public directory where I kept a bunch of files that couldn't be
reached from the web interface.

Hi All,

I=92m setting up a new entertainment center for my family room with all
of the standard modern fair, large LCD TV, BlueRay player, Tivo and
such. I thought it would be fun to pull out my old Atari items from
storage and permanently connect an Atari 8-bit into my entertainment
center via composite video. I=92ve got several Atari 800, 800XL, 130XL,
and 1200XL systems.

I=92m thinking of using an 800XL. I think the biggest challenge will be
cable management for the power, video and possible a disk drive
cable. Does anybody have any clever suggestions for this project?

Thanks,
John

I don't really have what you'd call an "entertainment center" more than
"a TV stand with a cabinet and a drawer."

A variety of game systems live in the cabinet, right below the TV:

```
                                                | Atari 7800
  Sega Genesis                                  | Sony PS2 Slim
  Nintendo NES | Sega Dreamcast | Atari Jaguar | Nintendo Wii
```

The NES is mostly-front loading. The Genesis, DC, Jaguar, 7800 and PS2
are all top-loading (so the 7800 is kind of 'in the way' of the PS2).
The Wii (new addition to the family!) is front-loading.

So I was able to stack them, as ASCII'd above, and it's not a horrible
abomination.

The 800XL lives inside the drawer, along with a ton of DVDs.
It's a bit crowded. Since it's inside a drawer, it's not easy to
type on, but 99% of the time you're just hitting Start/Select/Option.

I simply wire everything over the back of the drawer; the power
adapter lives on the floor. I use an SIO2SD (dangerously caseless
at the moment!) for booting. It's powered off the SIO port, so
it doesn't require a power cable. I simply leave it at the top right
of the 800XL (right of the cartridge port).

Hey, that makes me curious... with the wonders of wireless
controllers (we have one for PS2 and the Wii, of course... and
back when we had a Gamecube, we had a Wavebird), I should look
into wireless Sega Genesis controllers!

Off to check amazon...

A few, apparently! Anyone know if they work with the Atari?

Got a friend, who is looking for a working Sparta Dos X cartridge.

He is willing to pay a reasonable price for one.

Post or contact me as phantomm@suddenlink.net if you have
one for sell. He wants to know asking price before agreeing to anything.

I have my 800xl hooked upto an LCD TV! Doing both Composite Video & S-Video=
!=20
I use an adapter that adapts Chroma-Luma to S-Video! It's Bi-Directional!=
=20
Chroma-Luma and S-Video are basically the same thing with an Adapter!

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, and 800XE personal/home computers, and the Atari XE video game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from 1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

Today, the Atari computer intellectual property rights, along with the home market rights to the Atari trademark itself, are owned by Atari Interactive, Inc., a subsidiary of Atari, SA of Lyon, France.

Ok, I'll bite.

How does one small computer wind up occupying 2 bedrooms?

Duh. Vacuum tubes and patch panels, dude. More, if there's an Atari 212cr
card reader.

I'm trying to remember -- did that run Microsoft's short-lived Unix?
--
As we enjoy great advantages from the inventions of others, we should
be glad of an opportunity to serve others by any invention of ours;
and this we should do freely and generously. (Benjamin Franklin)

Nobody did, which is likely one reason it never made it to production.

But it's decades later, and some people are apparently interested in
prototypes, those home computers that never were. Back then, the magazine=
=20
articles would feature them, and then you'd never hear anything more about=
=20
them. Lots of speculation, but somehow they never appeared. Now, they=20
become sought after items because collectors have collected all the common=
=20
stuff, and having some prototype in your collection makes your collection
different from all the rest.

    Michael

Not "Microsoft's short-lived Unix"; it was Microsoft Xenix (but I
have no idea if that's what it ran).

In reality, it ran Xenix. That's the way Mi$uck spells "Unix".

According to what I read on the interwebs, it did run Xenix on the
68000. However, in practice, ours ran TRS-DOS on the Z80.

This is a good read if you'd rather find out about 'Xenix',
instead of listening to Microsoft haters, not that I like
them all that much myself. 8^)

ISTM that Xenix was in reality developed by SCO (the Santa Cruiz
Operation), a company that Mi$uck had about a 30% investment in at
one time. I think Mi$uck may still use their ownership in SCO to
sue over the use of Linux.

There ain't no Santa Cruiz!

I didn't look at the link, so I didn't know what computer it was, and
I only guess now.

There was a TRS-DOS for the Radio Shack 68000 based computers. I can't
remember if that was a stop-gap until Xenix was ready for it, or if
there was some other reasoning.

    Michael
